This subject does not appear to have had the supervision that it should. On the passenger steamers a sharp inspection is made daily so far as the passengers' conveniences are concerned, but those of the crew would appear to be sadly neglected. This is a matter of discipline, which could easily be enforced.

(f) *The undermanning of ships.*

Under the present law, a ship can clear an inland port with a crew palpably too small to operate without dan-

ger. The Board recommends that some steps be taken to go into this question so that no vessel would be permitted to clear without an adequate complement of men. This is a somewhat technical question and the Board would prefer to shift the responsibility as to measures inaugurated to those technically conversant with the sailing of ships.

(g) *Prevalence of venereal diseases.*

Some steps should be taken to see that men thus afflicted are not allowed on board. Medical inspection seems to be very lax and very little is done on the discovery of the infection to isolate the diseased man.

(h) *Lack of recreation.*

Considerable complaint has been made that the men had nothing to do in their spare moments. While the working hours are long and a great deal of time is taken in sleeping, at the same time there seems to be a general demand for books and periodicals. No provision is made to supply these and, generally speaking, there is no place where men can enjoy small games such as cards, draughts, etc.

(i) *Certificate of discharge.*

The complaints as to the absence of this certificate have been justified. It is considered that in the interest of both the ships and the men, these certificates should be given. It would assist the employer in having a record of the employee and to some extent do away with the employment of men who are put on and subsequently turn out to be no good for want of experience. The way things are at present men drift around in an aimless sort of way, no record behind them, and very little to look forward to. The good record marks on certificates of discharge have been exhibited to the Board as a source of pride by the possessors of them.

(j) *Discrimination against union men on the part of certain skippers.*

This complaint was justified, and the General Manager, Mr. Enderby, has admitted in his evidence that at least one officer had been reprimanded for this practice, he having collected and insisted upon the surrender of union books by those union men who were being employed.

(k) *Lax compliance with the Shipping Act in reference to the signing of the Articles.*

It has been discovered that these Articles, instead of being signed in the presence of the Custom House Officer at the port of embarkation, are frequently, and in fact in most cases, signed on board the ship, often many days after the employee has come aboard. A rigid inspection should be made to see that the terms of the Shipping Act are carried out, because it is in the interest both of the employer and the employee.

(l) *Desirability of the appointment of shipping masters at the inland ports.*

This subject came up frequently during the investigation and the consensus of opinion seems to be that a shipping master, duly qualified, appointed by the Government, would be an advantage. In lieu of a shipping master, of course some officials of the Customs would do as well. This gives a seaman an opportunity of getting any wrong redressed and enables him to get a just decision in any case where he imagines he has a grievance. The practice at present is that after the complainant has made a complaint in the usual channel, through his superiors, and no action is taken, the subject is washed out. There seems to be no question as to the advisability of shipping masters at ocean ports, and similar officers would be of almost equal benefit at inland ports.

(m) *Notices of discharge, etc.*

Complaint was made as to notices of discharge, the general practice being

theoretically to give seven (7) days on an employee being discharged, or his leaving the service. In practice this does not work. The employee leaves whenever he sees fit at a port of call, and the officers of the ship seem to be able to dispense with his services without notice. The Company has just issued printed notices touching this matter, a copy of which is enclosed herewith. The interpretation of the ship's contract should not be unilateral but should work both ways as regards notice required.

(n) *Men paid at a monthly rate for single trips of less than twenty-four hours.*

Complaints came before the Board of men being paid at monthly rates for single trips of less than twenty-four (24) hours. It is recommended that these men be paid at shore rates for similar work.

(o) *Lack of protection around the gears of deck winches.*

This is not generally done. A number of vessels were examined and it was found that the machinery was dangerously exposed and lent itself to accidents in bad weather especially. A rigid inspection of all machinery should be made forthwith and steps taken to have all exposed parts such as gears of deck winches, etc., protected.

WITHDRAWAL OF COAL PASSERS.

5. Lastly, as regards the complaint of the withdrawal of coal passers, the Board finds that this action entailed additional work and hardship in some cases. The utilizing of the forward crew to assist the firemen has unfortunately in many cases engendered considerable friction and has not tended to facilitate the smooth working of the engine-room, which is so desirable. The Company recognize in some cases the necessity of passers, as in the case of the Collingwood, the District Superintendent having recommended that passers be rein-

stated on this boat. A thorough study of some of the other boats—which are known among the seamen as “hard” boats—should be made as the placing of passers would eliminate much of the trouble which now exists between the forward and after crews.

The Board in its investigations has discovered that on many ships there were continual changes in the personnel of the crew, in some cases the crews having changed completely three times up to date, and can only come to the conclusion that the conditions, especially in the fire hole, are such that the men have thrown up their jobs even at the risk in these days of unemployment of failing to secure work on shore. As before pointed out, the conditions of the sleeping quarters, sanitation, ventilation, and the hard work, have in the opinion of the Board, been the cause of so much transient employment.

WAGES.

6. The question of wages paid on these ships is a difficult one to tackle, and the Board has gone into the subject with great pains and submits the following remarks:—

Generally speaking, the wages paid sailors of both the forward and after crews were found to be below the remunerations of similar occupations, both skilled and unskilled labour, on shore.

Take the wages of a wheelman, for example, in 1915, during the eight (8) months of service on the Great Lakes, which is the maximum period of employment in the year at the scale as submitted to the Board, he would earn \$336 and his board for the period. If he were a married man, and a large proportion of these crews are married, he would of necessity have to support a family on this sum. If he were fortunate enough to get two (2) months intermittent employment, as we believe is the average case, he would make, say \$100, giving him a total of \$436 for his year's work. The *Labour Gazette* for 1915

gives a fair cost of ordinary living for a small family as \$719.16. This means that he would have at that time to deprive his family of what is usually considered as essentials. He has nothing to go on with for a supply of clothing for himself and family as it certainly appears that he was in very bad financial straits and was quite evidently underpaid.

In 1920 the wheelman's wages had been raised up to \$880 for the season. At the higher rate of wages paid on shore, if he got employment, he may have earned \$220, making his whole year's earnings \$1,100. The *Labour Gazette* for that year shows that the cost of living for a small family was \$1,212.12. It will then be seen that although his condition was improved over 1915, he still is not in a satisfactory financial shape to meet the requirements of his family. Examination of witnesses pursuing a similar occupation on shore, say motormen, hoisting engineers, and so forth, shows that the shore standards are much higher and that the shore job is a much better one.

Of course the position of a single man is much better than that of a married man inasmuch as he has his board free and on the other hand he has not as a rule to keep up a household, but the evidence taken would show that a very large proportion are married men and that many single men have contributions to make for the support of their immediate families and relations. In fact there were only a few who did not have claims upon their wages of some sort in this respect.

In the case of the lower ratings, conditions are proportionately worse. On shore jobs where by reason of the Canadian climate certain trades remain inactive through the winter, higher wages have always been allowed to the trade so affected, for instance, this applies to the case of stonemason and bricklayer, who have always had a higher rate than carpenters whose work was not seriously affected by climatic conditions.

In the case of the crews of Canada Steamship Lines, Limited, boats, (and we believe on other lines) this aspect of employment has never been considered. The heavy reduction of wages at the beginning of this season put the seamen into a pecuniary condition as bad as 1915, which was bad enough. Many witnesses were examined who formerly led a seafaring life and had been employed on the Lakes. Without exception they all stated that they would not under any circumstances return to sailing, the reasons being given, surroundings were much better, hours were more satisfactory, more opportunity for enjoyment, better pay, and better environments, generally. The evidence in this respect was most emphatic.

The Board is of the opinion that the reduction was much too sweeping and after careful consideration believe that a ten per cent (10%) reduction would be more reasonable, especially in view of the fact of the light percentage in the decrease of the cost of living as given by the *Labour Gazette*. This amended schedule of wages should be retroactive from the beginning of the season of 1921. The reduction made this year in the pay of the masters and engineers was only ten per cent (10%). It is difficult to understand why only a ten per cent reduction was made in their cases and nearly thirty per cent (30%) in the cases of the rest of the crew, unless it be that it was anticipated that there would be considerable difficulty in replacing the certificated staff, whereas in the latter case, it was expected to take full advantage of the widespread unemployment of labour on shore. It might be noted, on reference to the exhibits, that the American schedule is much higher than the Canadian at the present time.

An analysis of the payrolls of the Canada Steamship Lines, Limited, indicates that large sums of money have been saved by the reductions made in their rates of wages. At the same time it is brought out in evidence that no reduction has been made in passenger rates

and a small reduction in freight rates, which are well maintained, and in addition, the evidence of the General Manager would go to show that the boats are operated at much less cost, more especially in respect to coal, so far as other expenses outside of labour are concerned.

In investigation as to the causes of the raise in rates during the period 1914-1920, it appears that it is due almost entirely to the scarcity of men and to the high rates paid ashore. Mr. Enderby testified that when his schedules were being made the Company had solely in view what they could afford to pay, but did not consider, in any case, the conditions of living imposed upon their men. It would appear to be evident that the reduction this year was made with the object in view of taking advantage of the abundance of men and labour conditions generally throughout the territory served by the Company from which their men are recruited.

CONCILIATION.

The Board has made several efforts towards conciliation. On the 11th instant a meeting between Mr. Norcross, the President, and Mr. Enderby, and the Board took place at the Company's Head Office, when it was emphatically stated that the union would not be recognized, that there was nothing to conciliate, and further, that it was the intention of the Company to make a further reduction. This was confirmed under oath by Mr. Enderby at the sitting of the Board on the 12th instant, when he stated that he had positive instructions from his Management to take the action above mentioned, and while he, as General Manager, was always willing to listen to complaints from men individually, no negotiations would be held with officials of the union. A further effort was made personally by Colonel Burns as representing the Canada Steamship Lines, Limited, on the Board, with Mr. Enderby on the 20th instant, without effect. Every assistance was given by Mr. Enderby—it

may be noted—in furnishing the Board with statistics and such information as was asked of him.

We have the honour to be,

Sir,

Your obedient servants,

(Sgd.) T. TRUEMAN BLACK,
Chairman.

(Sgd.) G. E. BURNS,
Member.

(Sgd.) D. L. KENNEDY,
Member.

SUPPLEMENTARY.

1. Since the foregoing award was completed and typewritten, additional information came before the Board through Mr. G. Ladouceur, the Business Agent of the local Seamen's, Firemen's and Cooks' Union of Canada, and his statement has been taken under oath and is attached hereto as an exhibit. In order to verify some of the assertions made by Mr. Ladouceur, the Board took the opportunity of visiting the Corunna while in port, a boat at present operated in the grain trade on the canals by the Canada Steamship Lines, Limited. The personal inspection of the fore-castle revealed a disgraceful state of affairs. The sleeping quarters were visited and found to be filthy almost beyond belief. Vermin of all sorts was in evidence, the mattresses were filthy, the bunks were of hard board, the walls and floors apparently had not been cleaned for a long time, ventilation was very bad, and many of the crew were sleeping on the hatches. The remains of dinner were lying around on two small wooden tables and no attempt had been made to clear away, although the crew had finished. There was no mess room. The articles of food we saw were badly cooked, and served in tin dishes none too clean. Flies were in abundance and there was a lot of waste food about, some of which was in the bunks. Everything was in disorder and no evidence whatever of cleanliness or an attempt at orderliness. The men

complained of the bed bugs. The food is carried from the after end forward by the men themselves. They stated that an attempt had been made to get the local Health Officers aboard but had failed. On visiting the after quarters conditions were somewhat better, but the cook complained of a superabundance of cockroaches. There are no baths or showers on this ship. The men complained of not getting enough sleep en route, being for the most part fourteen (14) to eighteen (18) hours out of the twenty-four (24) on duty and sleep being interrupted. There were constant changes in the crew, most men throwing up the job after a trip owing to bad conditions. Some respectable men out of employment in Montreal had been taken on board to engage, but had refused absolutely when shown the surroundings. The Board has evidence that there are other ships in this Service almost, if not quite, as bad as this one, and would recommend a rigid inspection forthwith. There seems to be no ques-

tion that the men are dissatisfied, especially the union men who are expecting the union officials to have something done at an early date.

2. The Board has had reported to it the case of an assistant cook whose body was recently found in the river, on whose person was found a letter stating that he had committed suicide because he found it impossible to keep his family going on the small wages he was in receipt of. The Coroner's Court has not yet completed enquiries and the Board was unable to get complete verification, but it is recommended that further investigation be made with the object of getting at the absolute facts.

Supplementary Report of Board in Dispute between the Association of Building and Construction Industries and men of various trades in the building industry in Hamilton and district

THE Board established to deal with the dispute between the Association of Building and Construction Industries and men of various trades in the building industry in Hamilton and District, members of the Hamilton Building Trades Council, was reconvened in order to render more definite information with respect to certain points in the original report. The Board was composed as follows: His Honour Judge Colin G. Snider, chairman, Messrs. Joseph M. Piggott and H. J. Halford. The supplementary report was signed by the chairman and Mr. Piggott. The original

award had been accepted by both parties to the dispute.

Supplementary Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and in the matter of a dispute between The Association of Canadian Building and Construction Industries (employer), and men of all trades in the building industry in Hamilton and district, members of Hamilton Building Trades Council and Bricklayers' International Union (employees).

The Honourable G. D. Robertson,
Minister of Labour,
Ottawa, Ont.

The Chairman of the Board of Conciliation on receiving your instructions called a meeting of the Board for Tuesday the sixteenth day of August, 1921, at two o'clock in the afternoon at the Court House, in the City of Hamilton, for the purpose of expressing the Board's opinion upon the meaning and intention of the recommendation of the Board in the majority report as to the wages of unskilled labour, and reporting thereon.

Pursuant to this notice calling such meeting, the Board met at the time and place appointed. The Chairman and J. M. Pigott attended, but J. H. Halford, the third member, did not attend. He was notified of the appointment.

The Chairman and J. M. Pigott, having taken into consideration the matter stated in your telegram of instructions dated the 10th day of August, 1921, have the honour to report that the item in their majority report dated the 19th day of July, 1921, which reads:

"Hod carriers and builders' labourers 50c. per hour"———

was not intended to include common or unskilled labourers in connection with building construction, but was to include labourers who by experience in such work have acquired a certain amount of skill in some line of construction such as helping bricklayers or plasterers.

The majority of the Board, consisting of the Chairman and J. M. Pigott, inferring from the terms of your telegram above referred to that a recommendation is required from this Board as to the wages of such common labour in connection with building construction, now further recommend that forty cents (40c) per hour be set as a minimum rate of wages for this class for the balance of the year 1921.

All of which we have the honour to respectfully submit.

Dated at Hamilton this 16th day of August, 1921.

(Sgd.) COLIN G. SNIDER,
Chairman.

(Sgd.) JOSEPH M. PIGOTT,
Employers' Nominee.

Report of Board in Dispute between The Canadian Fish and Cold Storage Company, Prince Rupert, B.C., and certain of its employees

A REPORT was received from the Board established to deal with the dispute between the Canadian Fish and Cold Storage Company, Prince Rupert, B.C., and certain of its employees, being members of the Fish Packers' Union of that city. The Board was established with the joint consent of the disputants and was composed as follows: Messrs. J. H. McMullin, chairman, S. P. McMordie and Geo. Casey, Prince Rupert. The report of the Board was unanimous and contained recommendations as to settlement of the dispute.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Canadian Fish and Cold Storage Company, Limited, of Prince Rupert, B. C., and certain of its employees, being members of the Fish Packers' Union of that city, the dispute being referred to a Board of Conciliation and Investigation by mutual consent under Clause 63.

To the Honourable
The Minister of Labour,
Ottawa.

The undersigned, members of the Board of Conciliation and Investigation appointed in the above matter, beg respectfully to report as follows:—

The wages paid by the company when the present dispute arose were as follows:

67½ cents per hour for an eight hour day.

80 cents per hour for overtime.

85 cents per hour for Sundays and holidays.

The company notified their employees on June 10th, 1921, that a revision of wages was deemed necessary and offered the following:

60 cents per hour for an eight hour day.

70 cents per hour for ordinary overtime.

75 cents per hour for Sundays and holidays.

The Union replied with a request for a new rate as follows:

67½ cents per hour for an eight hour day.

101¼ cents per hour for overtime.

135 cents per hour for Sundays and holidays.

After a full consideration of the evidence and after hearing what was said by the representatives of both sides, the unanimous recommendations of the Board are as follows:

1. That the rate of wages to be paid by the Company should be:

62½ cents per hour for an eight hour day.

72½ cents per hour for ordinary overtime.

77½ cents per hour for Sundays and holidays.

2. That such change in wages should take effect from the first day of August, 1921.

3. That a bonus at the rate of \$1 per week, which was agreed to by the Company, be paid to all employees working in the sharp freezers and cold storage rooms.

4. That both parties agree in writing to be bound by the recommendations of the Board for the period of twelve months from July 10th, 1921, with a proviso for a semi-annual adjustment of wages, based on the family budget of the Canadian *Labour Gazette*, assuming that the proposed wage of 62½ cents is fair, computed on the June issue of the above-mentioned *Gazette*; the first semi-annual revision to be made on January 10th, 1922, based on the figures published in the January *Gazette* for the month of December, 1921; also providing for an automatic revision of the Company's Boarding House Rates according to rise or fall in wages, thereby removing the suspicion on both sides that either party in the dispute would take advantage of an opportune moment to enforce unfair conditions on the other.

All of which is respectfully submitted.

(Sgd.) J. H. McMULLIN,
Chairman.

(Sgd.) GEO. B. CASEY,

(Sgd.) S. P. McMORDIE.

Dated at Prince Rupert, B. C.
August 9, 1921.

Report of Board in Dispute between the Corporation of the City of Hull, Que., and its firemen

A REPORT was received from the Board established to deal with the dispute between the Corporation of the City of Hull, Que., and its firemen, being members of Local 174, International Association of Fire Fighters. The Board was established with the joint consent of the disputants and was composed as follows: Messrs. Stanfield Larose, Chairman, Moïse Laverdure and Eugène Reinhardt, Hull. The report was signed by the chairman and Mr. Laverdure and contained recommendations concerning settlement of the dispute. Mr. Reinhardt presented a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Corporation of the City of Hull and its Firemen, being members of Local 174, International Association of Fire Fighters.

To the Honourable
The Minister of Labour,
Ottawa.

Sir,—

We have the honour to submit to you our report as members of the Board of Conciliation duly formed and authorized by you, according to letters dated July 15 and 28 and August 3, appointing Mr. Eugène Reinhardt, of Hull, at the request of Local 174, "International Association of Fire Fighters," recommending the same, Mr. Moïse J. Laverdure, merchant, Hull, upon recommendation of the City Council of Hull, pursuant to a resolution to that effect, a copy of which has been forwarded to you; and finally Mr. Stanfield Larose, of the City of Hull, duly appointed by the first two members, and to act, according to said Act, as Chairman of said Board of Conciliation.

I.—PROCEEDINGS.

On August 4th, the members of said Board of Conciliation conferred together on the manner and date of the beginning of the investigation in connection with the above-mentioned dispute, the 5th day of the month being the day fixed for the first hearing of persons summoned to appear at said investigation.

PROCEEDINGS AT THE INVESTIGATION.

The first meeting of the Board took place at 3 o'clock of the afternoon on the 6th day of the month of August; the following persons summoned appeared and testified at the hearing, to wit:

1. ALPHONSE TESSIER, Chief of the Fire Department;
2. WILFRID ALBERT, Chauffeur in said Department;
3. JOSEPH RAYMOND, City Treasurer of Hull.

(See pages 1 to 6 of evidence).

Meeting of August 8, adjourned from the preceding one:

1. ARTHUR THIBAUT, Fireman;
2. ZEPHIR LEBLANC, Captain, Fire Department;
3. EMILE BOND, Deputy Chief, Fire Department;
4. CLEOPHAS BOUCHER, Sergeant in said Department.

Meeting of August 9, adjourned from the preceding one:

1. ARTHUR THIBAUT, Fireman (2nd time);
2. EMERY PAQUETTE, Fireman;
3. ADELARD AUDETTE, Captain, Fire Dept.;
4. OVILA RAYMOND, Fireman;
5. GAUDIAS TREMBLAY, Fireman;
6. NAPOLEON BOUCHER, Fireman.

Meeting of August 10, adjourned from the preceding one:

1. ETIENNE TALBOT, Butcher, Alderman of Hull;
2. FELIX CHARRON, Alderman of Hull.

Meeting of August 13, adjourned from the preceding one:

1. J. W. STE-MARIE, Legal Adviser, City of Hull;
2. JOSEPH MARCOUX, Butcher, Hull;
3. WILLIE ROSSIGNOL, Lieutenant, Fire Department;
4. OVILA LATULIPPE, Agent of the Provincial Government.

Meeting of August 15, adjourned from the preceding one:

1. JOSEPH RAYMOND, City Treasurer of Hull (2nd time);
2. His Honour Mayor LOUIS COUSINEAU;
3. FELIX LEGAULT, Alderman of the City of Hull.

The Board thought and considered indispensable, under the circumstances, to retain the services of Mr. Honoré Boulay, 96 Hôtel-de-Ville Street, to act as clerk and stenographer and take the statements of the above-mentioned summoned witnesses.

FINDINGS.

While entirely sympathizing with the force of firemen of the City of Hull, we are of the opinion that they would be or might be entitled to an increase in wages, provided, however, the Corporation of the City of Hull is able to secure funds for that purpose, according to the provisions of the charter of the City of Hull contained in the Act of the Province of Quebec, 56 Vict. Chap. 52 and the amendments thereof. In the present case, not only is it necessary to consider the request for an increase for each man individually, but we must also take into account what has already been done, and more particularly Article 392 of said Act, which reads as follows:

392A. No resolution of the council authorizing the expenditure of any moneys shall be adopted, or have any effect until a certificate of the city treasurer is produced, establishing that there are funds available and at the disposal of the city for the service and purposes for which such expenditure is proposed, in accordance with the provisions of this charter.

No contract or agreement whatever shall be binding upon the city, unless it has been approved by the council.

The city shall not be liable for the price or value of work done, materials supplied, goods or effects furnished of

any kind whatever, nor for any fees for professional services, salary, wages or other remuneration, without the special authorization of the city council, nor unless, in every case, a certificate of the city treasurer is produced establishing that there are funds available appropriated for the particular object for which payment is sought; and no right of action shall exist against the city, unless the foregoing formalities are strictly observed, notwithstanding that the city may have benefited by any such contract, agreement, work, materials supplied or other services rendered.

That considering the financial condition of the city and the circumstances accompanying it, the latter would find it absolutely impossible to grant a request for an increase in wages this year, but the next council may, if the financial situation permits it, grant a fair and reasonable increase in each individual case.

That after finding it is not in evidence that the cost of living is higher to-day than it was last year, that the financial situation has not improved, and after an earnest consideration of all the facts mentioned at the investigation, we come to the conclusion that there is no reason to recommend an increase in wages at the present time.

Witness our hands, in the City of Hull, this twentieth day of the month of August, A. D., one thousand nine hundred and twenty-one.

(Sgd.) W. S. LAROSE,
Chairman.

(Sgd.) MOISE J. LAVERDURE,
Member of the Board.

NOTE.—This report having been presented to Mr. Eugène Reinhardt on the 20th inst., at a meeting of the Board of Conciliation, he refused to sign it, not wishing to accept it as worded, adding that he would submit his minority report.

(Sgd.) W. S. LAROSE,
Chairman.

(Sgd.) MOISE J. LAVERDURE,
Member of the Board.

Minority Report

Hull, August 25, 1921.

Mr. Acland,
Deputy Minister,
Department of Labour,
Ottawa.

Sir:—

I have the honour to submit to you the minority report in the dispute between the Municipality of the City of Hull and its Fire Fighters, members of International Association of Fire Fighters, Local No. 174.

In answer to the first objection on the part of the majority, paragraph 3, page 2, of the report as submitted:

“We are of the opinion that they would be or might be entitled to an increase in wages.”

Why this uncertainty? The evidence of His Honour the Mayor and of Aldermen Talbot, Charron and Legault, who form the Committee on Fire and Lighting as well as the majority of the Council leaves not a doubt as to the justice of their claim when they all express the same opinion.

They certainly deserve an increase, and the Mayor goes further when he says: “I do not know why we could not pay our fire fighters as well as any other city in the Dominion; their work is excellent and gives full satisfaction.” He also adds: “If I accepted arbitration, it was in order to reach a solution.”

According to the above-mentioned statements, the word ‘solution’ in my opinion means to grant them an increase, the evidence irrefutably establishing that they are entitled to what they ask.

As to the question of the cost of living, you will find enclosed herewith a memorandum prepared under the authority of the Department of Labour, establishing the weekly budget of a family for 1914-1918 and 1921. I could not get the

July budget; it may possibly show an appreciable decrease.

According to that report the decrease is not pronounced enough to be made the main argument in this case.

As to the financial position of the city, I will not discuss it. I still have in mind the spirited answer of our first magistrate to a certain high personage who, according to him, had dared show Hull in a bad light here and abroad.

Concerning the reduction of wages, I declare it is not justified.

Conclusion: The only and predominating question in this case is this: “Were they entitled to an increase?”

As the evidence shows, the employer itself, through its representatives, establishes it, and I expected a verdict in that direction.

This is why, Mr. Deputy Minister, it was impossible for me to be one of the parties signing a document so little consistent with the evidence.

Your most humble servant,

((Sgd.) EUGÈNE REINHARDT.

MEMORANDUM

COST PER WEEK OF A FAMILY BUDGET OF FOOD,
FUEL AND LIGHTING, AND RENT,
AT HULL, P. Q.

	1914	1918	1921
	June	June	June
Food	\$6.91	\$12.16	\$10.06
Fuel and lighting.....	1.55	2.80	3.79
Rent	4.25	4.38	5.63
Total*.....	12.73	19.37	19.50

*Laundry starch also included.

An estimate of clothing and sundry expenditures cannot be given for the particular months mentioned above. Below is an estimate of these expenditures for other months in the same year:

	1914	1918	1921
	Dec.	Dec.	Mar.
Clothing	\$3.29	\$5.94	\$5.85
Sundries	4.00	6.40	7.50

Report of Board in Dispute between Mr. F. W. Nicholas, Port McNicholl, Ont., and certain of his employees in the freight sheds

A REPORT was received from the Board established to deal with the dispute between Mr. F. W. Nicholas, of Port McNicholl, Ont., and certain of his employees, in the freight sheds at Port McNicholls, members of Local 1506, International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was composed as follows: Mr. J. M. Godfrey, K.C., Toronto, Chairman, appointed by the Minister in the absence of a recommendation from the other two members, Mr. Allan Purvis, Toronto, appointed by the Minister in the absence of a recommendation from the employer, and Mr. J. G. O'Donoghue, Toronto, nominee of the employees. The report was unanimous and contained recommendations as to settlement.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between Mr. F. W. Nicholas, of Port McNicoll, Ontario, (employer), and certain of his employees in the freight sheds at Port McNicoll, members of Lodge No. 1506, International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (employees).

Toronto, August 26th, 1921.

The Honourable G. D. Robertson,
Minister of Labour,
Ottawa, Ont.
Sir,—

The undersigned members of the Board herein held its first meeting in Toronto on the 10th of August, 1921, and appointed August 15th as the first meeting of the parties to the dispute.

On August 15th the Board met and was attended by the following:

A. C. Hay, Vice Grand President of the Brotherhood;

Frank H. Hall, member of the Board of Directors;

Messrs. Fenton, Scott and Smith, the local committee.

Mr. Nicholas was unable to be present at the first meeting. After the employees had presented their case, the Board adjourned until the 16th in order to hear Mr. Nicholas. On the 16th the Board again met and Mr. Nicholas made his statement.

The Board again met at Port McNicoll on the 18th and 19th of August and considered the complaints made by the men, that a number of permanent residents of Port McNicoll had been refused employment and discriminated against because they were members of the Union. At this session of the Board the evidence of seventeen employees was heard.

The Board is of the opinion that these men were not discriminated against by Mr. Nicholas owing to their membership in the union. Mr. Nicholas, however, agreed, with the exception of one man, to give employment to these men as soon as possible.

With regard to the other matters in dispute, the Board reports as follows:

The Brotherhood is one of the large transportation unions. In the fall of 1920 the C. P. R. promised to negotiate a schedule in 1921 for the employees governed by the Brotherhood membership. Had the C. P. R. continued to employ the kind of labour involved herein a schedule would, no doubt, have been arranged, and the employees would have come under the decision of the Canadian

Railway Association, reducing the wages of certain transportation employees six cents an hour, a reduction put into effect, and accepted by those affected, under protest pending the hearing of the matter by a Board of Conciliation.

When the C. P. R. contracted the work to Mr. Nicholas, the latter employed labour at current market rates, with the result that instead of a decrease in wages of six cents an hour, the reduction ran into much larger figures. Mr. Nicholas further refused to negotiate a schedule covering conditions of labour.

The Board is of the opinion that, whether so intended or not by the C.P.R., the contracting out above referred to is an evasion of the situation by the company. The Brotherhood is entitled to recognition with the other railway unions, so that the reduction in the rates

of wages should be only six cents an hour, pending the final determination of the whole matter by the Board of Conciliation applied for by the transportation unions. That reduction should apply herein as of the same date as in the case of the other unions.

So far as the arranging of a schedule is concerned, Mr. Nicholas agreed to discuss with a committee of his employees any proposition that they choose to bring forward.

The Board was very much assisted by the good-will and utmost frankness displayed by all parties to the dispute.

(Sgd.) JNO. M. GODFREY,
Chairman.

(Sgd.) J. G. O'DONOGHUE,

(Sgd.) ALLAN PURVIS,
Members.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1921

TWO strikes, involving 124 employees were reported as having commenced during August. There were in existence at some time or other during the month 24 strikes, involving approximately 3,221 employees and a total time loss estimated at 83,105 working days, as compared with 32 strikes, 7,662 workpeople and 103,554 working days in July, 1921; and 30 strikes, 4,840 workpeople and 74,366 working days in August, 1920. The time loss occasioned by the two strikes which began in August was 791 working days, while a loss of 82,314 working days is charged to the 22 strikes that commenced prior to August. Three strikes which commenced prior to August were reported to have terminated. The two

strikes commencing during August terminated during the month, leaving the following 19 strikes, involving 2,904 workpeople, on record on August 31: employees of steel and coal companies, Sydney; gauge men, Sydney; machinists, Orillia; sheet metal workers, Saskatoon; compositors, Montreal; compositors, etc., Vancouver; photo engravers, Montreal; photo engravers, Ottawa; printers, Montreal; printers, Ottawa; printers, Toronto; printers, Winnipeg; printers, bookbinders, pressmen, etc., Halifax; typesetters, pressmen and bookbinders, Hamilton; tailors, Winnipeg; cigar-makers, Vancouver; shoeworkers, Galt; street railway employees, St. John; and scowmen and lumber handlers, St. John.

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC. — This group was practically inactive as regards strikes. The strike of coal miners at Wayne, Alta., terminated on August 11. It commenced

STRIKES AND LOCKOUTS DURING AUGUST, 1921

Industry or Occupation	Particulars.	No. of employees affected.	Time loss in working days.
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—			
Strikes commencing prior to August, 1921			
Coal miners, South Minto, N.B.....	Alleged lockout April 1. Against a reduction in wages. Information received indicates this dispute terminated during July. Work was resumed at reduced wages.		
Coal miners, Wayne, Alta.....	Commenced March 2. In protest against the stoppage of extra pay to certain employees. Settled through mediation of the Department of Labour. Work resumed August 11.	37	333
BUILDING AND CONSTRUCTION—			
Carpenters, Welland, Ont.....	Alleged lockout May 2. Against reduction in wages. Information received indicates conditions no longer affected.		
Painters, Sault Ste. Marie, Ont.....	Commenced May 2. Against a reduction in wages. Information received indicates conditions ceased to be affected.		
Stonecutters, Toronto, Ont.....	Commenced May 4. Alleged lockout. Dispute regarding certain working conditions. Settled by negotiations; work resumed August 31.	85	2,295
METALS, MACHINERY AND CONVEYANCES—			
Employees of steel and coal companies, Sydney, N.S.	Commenced November 22, 1920. For increased wages and improved working conditions. Unterminated.	150	4,050
Gauge men, Sydney, N.S.	Commenced June 9. In sympathy with the employees of the steel and coal companies. Unterminated.	16	432
Machinists, Orillia, Ont.....	Commenced May 9. Employees objected to being taken off their own work and having to divide up other work. Unterminated.	21	567
Sheet metal workers, Saskatoon, Sask.....	Commenced June 4. Alleged violation of agreement by employers. Unterminated.	6	162
PRINTING AND PUBLISHING—			
Compositors, Montreal, Que.....	Commenced June 14. Objection of men to perform work that came from shop where strike existed. Unterminated.	25	675
Compositors, Vancouver, B.C.....	Commenced May 2. For increased wages and 44-hour week. Unterminated.	44	1 188
Photo engravers, Montreal, Que.....	Commenced May 2. For shorter hours. Unterminated.....	56	1,512
Photo engravers, Ottawa, Ont.....	Commenced June 1. For increased wages and 44-hour week. Unterminated.	12	324
Printers, Montreal, Que.....	Commenced July 1. For increased wages and 44-hour week. Unterminated.	450	12,150
Printers, Ottawa, Ont.....	Commenced June 1. For increased wages and 44-hour week. Unterminated.	160	4,320
Printers, Toronto, Ont.....	Commenced June 1. For increased wages and 44-hour week. Unterminated.	864	23,328

STRIKES AND LOCKOUTS DURING AUGUST, 1921—Continued.

Industry or Occupation.	Particulars.	No. of employees affected.	Time loss in working days.
PRINTING AND PUBLISHING—Continued.			
Printers, Winnipeg, Man.....	Commenced July 1. Alleged lockout when employees were refused a renewal of agreement. Unterminated.	135	3,645
Printers, bookbinders, pressmen, etc., Halifax, N.S.	Commenced May 2. For shorter hours. Unterminated.....	44	1,188
Typesetters, pressmen and bookbinders, Hamilton, Ont.	Commenced May 2. Alleged violation of agreement by employers. Unterminated.	250	6,750
CLOTHING—			
Tailors, Winnipeg, Man.....	Commenced July 15. Against a reduction in wages; employees allege a violation of agreement, followed by a lockout. Unterminated.	175	4,725
FOODS, LIQUORS AND TOBACCO.—			
Cigarmakers, Vancouver, B.C.....	Commenced May 31. Against the introduction of new machinery. Unterminated.	32	864
LEATHER—			
Shoeworkers, Galt, Ont.....	Commenced July 7. Against a reduction in wages. Unterminated...	14	378
Shoeworkers, Toronto, Ont.....	Commenced April 26. Against a reduction in wages. Information received indicates conditions no longer affected.		
TRANSPORTATION—			
Street railway employees, St. John, N.B.....	Commenced June 29. In protest against reduction in wages and certain working conditions. Unterminated.	250	6,750
Firemen and oilers, Vancouver, B.C.....	Commenced July 20. Against a reduction in wages. Strike declared off and work resumed August 22.	71	1,278
Longshoremen, St. John, N.B.....	Commenced June 22. Alleged violation of agreement. Information received indicates conditions no longer affected.		
Scowmen and lumber handlers, St. John, N.B.	Commenced June 22. Against reduction in wages. Unterminated...	200	5,400
Strikes commencing during August, 1921			
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—			
Quarrymen, millmen, warehousemen and general labourer, Iona, N.S.	Commenced August 15. Against a reduction in wages and also to secure wages over due. Settled by negotiations; work resumed August 22.	30	180
CLOTHING—			
Tailors, pressers and seamers, Hamilton, Ont.	Commenced August 11. Against reduction in wages and shop conditions. Settled by negotiations; work resumed August 19.	94	611

on March 2, when the employees claimed that, according to their interpretation of the agreement, an extra wage remuneration (which the company had ceased paying) to certain miners should continue during the life of the agreement. The company claimed that the extra wage was paid only for extra work and for the period during which the extra work was required. An official of the Department arbitrated successfully in the final settlement and work was resumed on August 11.

A strike of quarrymen, millmen and labourers at Iona, N.S., commenced on August 15 in protest against a proposed wage reduction of 25 per cent. The employees were willing to accept a 12½ per cent reduction for three months, but the firm refused. The matter of wages, alleged to be in arrears, was also a contributory cause of the strike. After being out a week, work was resumed on a reduced scale of 25 per cent, but the company agreed to pay any arrears of wages and to institute a weekly payday.

BUILDING AND CONSTRUCTION. — The month of July closed with three strikes in existence — carpenters at Welland, painters at Sault Ste. Marie, and stone-cutters at Toronto. At the end of August, in the case of the first two conditions had ceased to be affected, and the third terminated by negotiations on August 31.

METALS, MACHINERY AND CONVEYANCES. — There was no apparent change in this group since the record of July. At the end of August there were 4 strikes, involving 193 workpeople and resulting in an estimated time loss of 4,825 working days.

PRINTING AND PUBLISHING. — Several of the strikes in this group commencing during the past three months with the object of securing the general application of the 44-hour week were untermi-nated, there being in existence at the end of the month 10 strikes, involving 2,040 workpeople with an estimated time loss of 55,080 working days.

CLOTHING. — About 175 clothing workers in Winnipeg were out on what is alleged to be a lockout. The employees claim that an agreement (which renewed itself each year unless 15 days' notice was given prior to the expiration of the contract) was violated by the employers who sought a 10 per cent reduction in wages. This dispute was untermi-nated. Ninety garment workers in Hamilton struck on August 11, in protest against a wage reduction and certain shop conditions. The strike was terminated on August 19.

TRANSPORTATION. — The strike of street railway workers and the strike of scowmen and lumber handlers at St. John remained untermi-nated.

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING JULY, 1921

THE following details with regard to strikes and lockouts in the United Kingdom during July, 1921, based on returns from employers and workpeople, are taken from the August issue of the *British Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION. — The number of trade disputes involving a stoppage of work, reported to the Department as beginning in July,

was 40, as compared with 29 in the previous month, and 147 in July, 1920. In these new disputes about 41,000 workpeople were directly involved, and 4,000 indirectly involved (*i. e.*, thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes).

The national dispute in the coal mining industry, which began on April 1, remained unsettled until July 1, and,

in addition, about 15,000 workpeople were involved, either directly or indirectly, in 53 other disputes, which began before July, and were still in progress at the beginning of that month. The total number of new and old disputes in progress in July was thus 94, involving about 1,127,000* workpeople, and resulting in a loss during July of over 6,300,000† working days.

CAUSES.—Of the 40 new disputes, 20, directly involving nearly 20,000 workpeople, arose out of proposed reductions in wages; 11, directly involving nearly 6,000 workpeople, on questions respecting the employment of particular classes or persons; and 9, directly involving about 15,000 workpeople, on other questions.

RESULTS.—Apart from the settlement of the national coal mining dispute, which resulted in a compromise, settlements were effected during July in the case of 25 new disputes, directly involving about 23,000 workpeople, and 27 old disputes, directly involving about 9,000 workpeople. Of these disputes 14, directly involving nearly 9,000 workpeople, were settled in favour of the workpeople; 17, directly involving over

15,000 workpeople, in favour of the employers; and 21, directly involving about 8,000 workpeople, were compromised. In the case of 7 disputes, directly involving nearly 16,000 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups and trades:

Groups of Trades	Number of Disputes.			Number of working people involved in all disputes in progress in July	Aggregate duration in working days of all disputes in progress in July.
	Started before July 1.	Started in July.	Total		
Building.....	7	7	14	2,000	29,000
Mining and Quarrying.....	8	9	17	1,101,000	6,081,000
Metal, Engineering and Shipbuilding..	17	10	27	12,000	150,000
Other trades.....	22	14	36	12,000	67,000
Total, July, 1921....	54	40	94	1,127,000*	†6,327,000
Total, June, 1921....	62	29	91	1,535,000	29,603,000
Total, July, 1920....	118	147	265	90,000	954,000

* Workpeople involved in more than one dispute during the month (e. g. some coal miners) are counted once only in the total.

† Inclusive of days lost at collieries, subsequent to the date of settlement of the national dispute, in consequence of delays in re-starting.

STRIKES AND LOCKOUTS IN THE UNITED STATES

Record of Bureau of Labour Statistics for 5-year period, 1916-1920

THE United States Bureau of Labour Statistics recently issued a report on strikes and lockouts in that country during the five-year period 1916 to 1920. (See *Monthly Labour Review*, June, 1921 pp. 162-181). In the report it is pointed out that as the bureau has no authority to require reports relative to strikes and lockouts from any one, the information

obtained should not be regarded as exhaustive. In the case of a number of the strikes and lockouts that came to the attention of the Department, information respecting the numbers of workers involved and the time loss was unobtainable. The following table with respect to strikes and lockouts during the period under review is, therefore, admittedly incomplete:—

	1916	1917	1918	1919	1920
Strikes.....	3,681	4,324	3,248	3,444	3,109
Lockouts.....	108	126	105	125	58
*Workers involved in strikes.....	1,546,735	1,208,121	1,196,928	3,992,324	1,398,918
*Workers involved in lockouts.....	53,182	19,133	43,061	162,096	17,663
*Duration of strikes, days.....	46,305	25,077	28,779	60,715	47,504
*Duration of lockouts, days.....	3,375	1,904	1,116	2,215	1,376

* These figures do not cover all the strikes and lockouts listed.

The reduction in the number of strikes which occurred in 1920 is attributed to the slowing-down of the mills during summer, followed by shut-downs in the fall. In that year, apart from the so-called "outlaw" strikes of railroad switchmen and yardmen which involved

about 500,000 men, fewer large strikes occurred than in 1919, when over a million men were involved in three strikes alone.

The principal causes of strikes and lockouts are shown in the following table:—

Matter of dispute	Strikes.					Lockouts				
	1916	1917	1918	1919	1920	1916	1917	1918	1919	1920
Increase of wages.....	1,290	1,554	1,383	1,050	1,316	11	17	14	24	10
Decrease of wages.....	33	34	34	80	122	2	2	2	3	11
Nonpayment of wages.....	13	17	31	11	20		1			
Increase of hours.....	3	18	6	25	7	4				
Decrease of hours.....	111	127	79	109	62	2	5		8	
Increase of wages and decrease of hours.....	479	374	254	568	263	2	4	2	9	3
Recognition of the union.....	327	253	144	319	113	22	39	35	31	5
Recognition and wages.....	91	127	77	73	82	2	5	2	5	4
Recognition and hours.....	19	26	16	15	5	1	1		1	1
Recognition, wages, and hours.....	51	43	49	69	41	5			7	3
General conditions.....	59	100	59	70	74		4	2		
Conditions and wages.....	56	70	52	61	53	2	1	2	1	3
Conditions and hours.....	3	17	2	5	2		1			
Conditions, wages, and hours.....	25	26	8	37	43					
Conditions and recognition.....	4	13	7	14	6					
Discharge of foreman demanded.....	17	37	54	19	30		1			
Discharge of employees.....	122	205	138	144	139	5	3			
Employment of non-union men.....	69	78	60	12	37	4	1			
Objectionable persons hired.....	1	8	2	11	22					
Discrimination.....	9	12	32	52	29					2
Open or closed shop.....	13	22	45	42	108					2
Closed shop and other causes.....	42	19	17	128	70					2
Unfair products.....	7	9	1	5	22					
In regard to agreement.....	38	81	45	46	51	2	3	1	4	3
New agreement.....	37	22	4	36	11	3	2			
Sympathy.....	32	70	34	106	63	1	1	1		
Jurisdiction.....	19	21	16	15	20				1	
Unsatisfactory food.....	4	11	1	8	2					
Miscellaneous.....	109	163	172	83	72	7	5	9	15	
Not reported.....	598	782	426	231	224	33	30	35	16	9
Total.....	3,681	4,324	3,248	3,444	3,109	108	126	105	125	58

The industrial groups most affected by strikes and lockouts are shown as follows:—

Industry.	No. of Strikes and Lockouts.
Building trades.....	506
Clothing industry.....	285
Furniture industry.....	25
Iron and steel workers.....	25
Leather workers.....	32
Lumber workers.....	37
Metal trades.....	407
Mining.....	180
Paper manufacturing.....	39
Printing and publishing.....	78
Shipbuilding.....	44
Slughtering and meat cutting.....	42
Stonework.....	29
Textile industry.....	210
Tobacco.....	33
Transportation.....	238

The occupations most involved in strikes and lockouts in each year were as follows:—

Occupation.	Strikes and lockouts.				
	1916	1917	1918	1919	1920
Bakers.....	81	106	47	82	63
Boilermakers.....	23	44	28	31	20
Boot and shoe workers.....	45	38	50	54	62
Brewery workers.....	21	22	27	23	23
Brick and tile workers.....	23	9	5	16	18
Building labourers and hod carriers.....	54	74	27	49	88
Carpenters.....	75	101	91	94	71
Chaufeurs and teamsters.....	108	164	129	95	130
Freight handlers.....	41	61	26	55	60
Glass workers.....	41	23	13	9	11
Hat, cap, and fur workers.....	26	52	38	37	50
Inside wiremen.....	32	33	45	33	51
Longshoremen.....	117	133	63	55	60
Machinists.....	257	204	207	202	114
Metal polishers.....	43	25	29	61	73
Miners, coal.....	373	355	162	148	158
Moulders.....	145	165	113	180	124
Painters and paperhangers.....	46	45	61	79	46
Plumbers and steamfitters.....	53	53	72	55	81
Rubber workers.....	38	19	15	15	14
Sheet metal workers.....	23	33	45	18	14
Street railway employees.....	56	118	117	110	81
Structural iron workers.....	23	16	20	15	31
Tailors.....	38	59	51	68	40

The result of strikes and lockouts reported to have ended in each of the five years is shown as follows:—

Result.	Strikes and lockouts ending in				
	1916	1917	1918	1919	1920
In favour of employers.....	748	395	485	680	644
In favour of employees.....	759	631	627	581	37
Compromised.....	777	720	91	796	
Employees returned pending arbitration.....	73	137	204	48	81

TRADES AND LABOUR CONGRESS OF CANADA

Synopsis of the Proceedings of the Thirty-Seventh Annual Convention

THE 37th annual convention of the Trades and Labour Congress of Canada was held in Winnipeg from August 22 to 27, inclusive, the sessions being held in the Royal Alexandra Hotel. (The Congress previously met in Winnipeg in 1907.) The preliminary proceedings of the 1921 con-

vention were presided over by Mr. Geo. Wright, president of the Winnipeg Trades and Labour Council, who welcomed the delegates on behalf of the international organized labour movement of the city. Mayor Edward Parnell extended the welcome of the municipality, and the Premier, Hon. T. C.

Norris, spoke on behalf of the province of Manitoba. The Hon. G. D. Robertson, Minister of Labour, addressed the assembled delegates on behalf of the Dominion Government, referring particularly to the fraternal delegates from Great Britain and the United States, and expressed the regrets of the Prime Minister, Right Hon. Arthur Meighen, in being unable to attend owing to other important business. Continuing the Minister of Labour said:

Thirteen years ago—next month, in the city of Quebec, I attended your annual convention for the first time as a delegate and have watched with pleasure and pride the steady but continual progress made by organized labour in Canada. It has encountered and overcome many obstacles. It has, generally speaking, conducted its business with dignity and discretion. Its mistakes have been largely due to inexperience and a desire to effect rapid progress on the part of newly organized bodies of workmen, but certainly it has grown in public esteem, and to-day to a substantial degree enjoys the confidence and respect of the people and of governments. That confidence has been impaired only as efforts to substitute a dictatorship policy for a square deal policy have occurred from time to time, either by an individual organization or a group acting in concert. Each recurring incident of this nature has but strengthened the real stable and abiding labour movement in Canada as represented by this congress.

Your affiliated unions and trades councils have, during the past year, been confronted with new problems. The world-wide contraction in trade and industry, debased currency, of many countries, deflation of values and the fall in prices, have all contributed to make steady employment difficult to obtain, and until normal levels are reached, unsettled conditions, with consequent industrial unrest, will doubtless continue to be with us. In a recent publication issued by the United States Government, Canada was referred to as the most happily situated country in the world, it having suffered less as regards unemployment, and generally was passing through this trying period of deflation and readjustment better than other nations. Latest reports indicate approximately six million unemployed in the United States, which must represent about twenty per cent of the total workers. England's figures to date are 2,171,000 out of a total of twelve million workers, or 17.81 per cent, while Canada's unemployed represents only 11 per cent of the wage earning population. While this result is gratifying

by way of comparison, it is not by any means all that could be desired.

Hoping that it may be useful and helpful to you in your deliberations may I briefly refer to some of the subjects which have and are receiving attention by the Government of Canada, particularly the Department of Labour.

To meet the requests of the Trades Congress, in 1919 a nation-wide employment service was set up by the Dominion Government under the provisions of the Employment Offices Co-Ordination Act in co-operation with the Provincial Governments, the cost being borne jointly and equally. It was inaugurated March 1, 1918, and gives free service to workmen seeking employment and to employers who need workmen. Through a clearing house system, maintained solely at the expense of the federal government, distribution interprovincially is made. During the 29 months the service has been in operation, 1,132,000 applications for employment were received; employers reported 1,043,000 vacancies and 920,324 persons were provided with employment through the agency of the employment service, an average of 31,735 per month for the whole period. Special rates on railways were obtained for distances of over 116 miles on presentation of certificate from a government employment office, and 90,407 have been transported to distant employment located through our clearing house system at reduced cost. Undoubtedly this service has been useful and beneficial to all parties affected and has contributed toward minimizing unemployment. Special attention is being given to select carefully and place applicants in employment to which they are best adapted. Many expressions of satisfaction have been received from both employers and workers and labour turnover has been materially reduced. The employment service system very well met all requirements until toward the end of 1920, when a rapid contraction in industry and trade occurred. In December of that year it was apparent that some form of unemployment relief would have to be undertaken. Federal, Provincial and Municipal Governments all contributed substantially as need required and ability permitted to create and provide employment. Through employers' associations appeals were made with good results. Many adopted a policy of part-time employment which materially helped, with the result that the number of men actually employed increased in January, 1921, and held fairly well until March, since which time further declines have occurred. The Federal Government announced on December 14, 1920, a general policy to aid municipalities to meet the need where employment could not be found. It was, briefly, that wherever local authorities deemed relief merited and necessary and pro-

vision was made for such relief, the Federal Government through the Department of Labour would bear one-third of the cost, suggesting that Provincial Governments should contribute an equal share. This suggestion was adopted by some provinces, though not by all. The Federal Government's expenditure for this purpose since January 1 last has been \$434,000, representing one-third of a total cost of about \$1,200,000 disbursed for this purpose. In addition the Federal Government assumed full responsibility for aiding disabled or handicapped returned soldiers and their dependents. Twelve thousand one hundred and sixty-five such men, together with their dependents, received aid in addition to their pensions to the amount of \$1,192,200 between January 1 and August 1 this year. The net result is that for unemployment relief since January 1 a total of \$2,392,000 has been disbursed, of which amount the Federal Government provided \$1,626,000, or more than double the contribution of provinces and municipalities combined. Inasmuch as no previous government recognized any responsibility or contributed toward the relief of unemployed workers, it will, I think, be conceded that a very fair contribution to meet this emergency has been made. The expedients adopted last winter were not wholly satisfactory, but certainly materially aided many thousands of people, who in most part, through no fault of their own, were unable to find employment. To improve matters as far as is possible, a suggestion was made to all provincial governments over a month ago, that in co-operation with municipal governments, employers, workers, returned soldiers and other organizations, an early survey be made provincially as the problem varied in different provinces, and that the Federal Government would then be glad to confer with the provinces as to ways and means best calculated to meet any need that may arise during the coming winter. Most provinces have evidenced a lively interest and good results are hoped for.

Immigration policy also has an important bearing on the unemployment problem. The Government has been criticized in the public press and by political opponents for adopting a restricted immigration policy. Since October, 1920, only bona fide farmers and domestic help have been encouraged to come to Canada. Central European immigration has been stopped, except of those well provided with means to maintain themselves here, \$250 for each man, \$150 for his wife and \$50 for each child being the minimum requirements. Steamship companies have been advised that immigrants transported without approval of immigration authorities are liable to be returned at expense of the transportation company. The same money restrictions apply against the United States of America, except

as to farm settlers, and have enabled the immigration officers to prevent a large influx of unemployed from that country. The Government sees no advantage in admitting immigrants to Canada who are without means of self support and who come to seek employment in competition with our own unemployed citizens.

Our seasonal employment in the agricultural industry and the dismissing of farm labour in the fall until following spring materially adds to our difficulties; adds undeserved burdens to our urban municipalities, and keener competition for the limited amount of employment available during the winter season.

A workman who has acquired technical training and skill has an advantage in obtaining employment, his usefulness and earning power is greater; therefore technical education and vocational training is a subject of interest alike to the employer, the worker and the state. Education, broadly defined, falls within the jurisdiction of the provinces. The Federal Government has for a number of years substantially contributed towards aiding in instruction in agriculture. No good reason appeared for the Federal Government aiding in the development of good animals and refraining from aiding in the development and education of skilled men. The inauguration of the employment service in 1918 was followed the next year by the enactment of legislation providing for technical education. For this purpose an appropriation of ten million dollars, over a period of ten years, was made, the payments to be distributed among the provinces according to population and under restrictions requiring each province to contribute an equal amount to be entitled to the grant. Federal Government disbursements in 1919 were \$274,000; in 1920, \$664,000. We have in Canada a total of 139 technical day and evening schools, conducted by 1,810 teachers, and attended by 60,546 pupils. All provinces and many cities are actively and creditably promoting this excellent work. A directing officer with an assistant attached to the Department of Labour supervises the administration of the federal grant and also carries on research work, which is useful to, and is placed at the disposal of, the provinces.

In 1920 the Department of Labour gave special attention to the subject of industrial relations for the purpose of promoting peace and harmony between employers and employees by the establishment of industrial councils. If the scheme justifies itself it will be continued, if not, it will be discontinued.

In 1921 we are actively investigating existing forms of old age pensions and unemployment insurance prevailing in other countries. A volume of information accumulated on the

subject has been submitted to the Trades Congress executive and to the Canadian Manufacturers' Association, with the suggestion that both peruse it carefully and be prepared to discuss the subject with the Government when its investigation has been completed. The Assistant Deputy Minister of Labour is now in Europe on this very matter, and I expect all available information will be in our possession by the end of the present year. Reports to hand do not indicate that satisfactory results have been obtained in countries that have legislated on these subjects; hence the necessity of exercising the utmost care before any definite line of policy is recommended to the Government of Canada for consideration.

Thus during the past four years the Department has endeavoured to take a progressive step. During that period it has developed and extended its sphere of usefulness more than during all the preceding years of its existence. War and post-war conditions brought the opportunity and enhanced necessity for it.

May I refer briefly to one other subject, namely, wages versus cost of living. In four years, 1917 to 1920, inclusive, wages and cost of living both advanced at a rate and to heights formerly undreamed of. The rise in cost of living was properly and constantly advanced as justifying repeated wage increases. In July, 1920, prices and cost of living commenced to decline. In retail prices of household needs, including rents, the Department's calculations show that it cost exactly \$2.00 in July, 1920, to purchase the goods \$1.00 would buy in July, 1914, and that in July, 1921, \$1.62 was required to make the same purchase. These facts should be borne in mind in dealing with the re-adjustment of wages. This may not be popular at this time, but the logic of it would be better understood a year or two hence.

The Government of Canada has through the Department of Labour and otherwise kept closely in touch with your executive. Their unflinching courtesy, accompanied by admirable frankness on the part of both, has I think resulted in each understanding better the other's problems and limitations. Time will not admit my discussing all of the matters that might profitably be referred to. I trust that your deliberations will be characterized by the careful and good judgment that I know you to be capable of exercising and that your decisions will be in the interest of the nation as a whole.

Hon. Thos. Johnson, K.C., attorney-general, also took part in the opening proceedings, and in his address stated that the success of labour

legislation in Manitoba was brought about by co-operation. He was a believer in the co-operation which co-operates and operates, and asked for the advice of organized labour in solving the labour problems. At the conclusion of the addresses, Mr. Tom Moore, the president, assumed charge of the proceedings, thanking the various speakers for the welcome extended.

The first order of business was receiving the report of the Credential Committee, which had met one day earlier to examine the credentials forwarded. The report as finally adopted, showed credentials received for 642 delegates, forty of which represented a similar number of international organizations which have the whole of their Canadian membership in affiliation with the congress; two represented national organizations; 39 represented 21 trades and labour councils, one represented the Alberta Federation of Labour, and 558 local unions. The credentials received also included those of the two fraternal delegates representing, respectively, the British Trades Union Congress and the American Federation of Labour.

Mr. J. A. P. Haydon, of Ottawa, was chosen as associate secretary and Mr. Gus. Francq, of Montreal, translator, the various reports and resolutions being read in French as well as in English. The customary committees and a special committee to report on unemployment and immigration having been appointed, the printed reports of the executive council, provincial executives, federations of labour and fraternal delegates were presented.

Report of the Executive Council

The executive council, which is composed of the president, three vice-presidents and the secretary-treasurer, presented a review of the most important matters dealt with since the close of the previous convention, making certain recommendations and suggesting changes in the constitution. In opening, the executive council stated as follows:

In Canada, as in practically all other countries, the trades union movement has suffered from those who—"boring from within"—aim to bring about the disruption and destruction of the trades union movement, and throughout the Dominion these tactics are being carried on insidiously and persistently. There has been no let up in the campaign (dictated by the Third Internationale of Moscow), of "belittling," "slandering," and in every possible way undermining confidence and respect for all who hold office in our movement, whether local, national or international. This has brought about in many places a temporary weakening of the morale and self-discipline of our members, with the result that the efforts of greedy employers and entrenched interests to bring about a reduction in the standards of the wage earners and to destroy the growing power and influence of the trades union movement, have been far more successful than otherwise would have been the case.

In spite of this discouraging condition, it is more than pleasing to report that, though some affiliated organizations have suffered slight losses in their Canadian membership, yet this has been more than offset by the new affiliations secured during the year, which leaves our aggregate membership no less in number, and the Congress in as strong a position as a year ago.

The following is a synopsis of the report, the various sections being numbered as in the original:

(1) *Legislative Programme, 1921.*—This portion contained an outline of the legislative requests presented to the Dominion Government on February 19, 1921, and also the matters which had been referred to several of the Government departments for consideration. The report also contained the reply of the Prime Minister to the memorandum submitted by the congress in connection with the legislative programme. (2) *Legislation.*—In this section was given a list of the acts passed and legislation discussed, to which the executive council gave special attention, and among which were references to the amendments to the Dominion Election Act and the International Labour Conventions and Recommendations. Concerning the latter subject the executive council referred to the request made on the Dominion Government for a meeting of provincial government representatives in order to

facilitate action by the provinces in regard to the draft conventions of the International Labour Conferences held in Washington in 1919 and in Genoa in 1920. Reference was also made to the debates on the Canadian National Railways and the Canadian Government Merchant Marine, the statement being made that it was evident that the policy of Government ownership in competition with private ownership did not meet with the approval of a considerable number of members of Parliament. Attention was called to the attacks which had been made in the Commons and the Senate on international trade unions and also on the Minister of Labour. Regarding proportional representation, reference was made to the report of the special parliamentary committee into the system of voting, and the report which had been presented. (3) *Provincial Executives and Federations of Labour.*—The executive reported on the re-establishment of a provincial executive committee for British Columbia; also called attention to the non-activity of the Nova Scotia Federation of Labour, and recommended the cancellation of the charter. Correspondence had taken place with the various federations and provincial executive committees with the object of securing uniform action in regard to legislative requests. (4) *Matters submitted to Government Departments.*—The executive council had co-operated with the representatives of the affiliated organizations in bringing to the attention of the Government departments matters on which adjustments were desired. These included among others: (a) conditions of employment on the Welland Ship Canal, (b) the order of President Hanna prohibiting employees of the Canadian National Railways from becoming parliamentary candidates, and (c) the sending of mounted police to localities where strikes had occurred. (5) *Labour Representatives on Advisory Councils.*—The executive council reported that the congress was officially represented on the Fire Prevention Association, Advisory Council for Scientific and

Industrial Research, Employment Service Council of Canada, Dominion Council of Health, National Council of Education, Canadian Council on Immigration of Women, and the Canadian National Council of Child Welfare, brief reports of the representatives being presented.

(6) *Industrial Councils*.—On the question of the formation of these bodies it was stated that the Dominion Government had taken definite action in the encouragement of their establishment, and a letter of the president of the Congress was submitted outlining the attitude of organized labour in reference to such councils. (7) *Compensation and Industrial Rehabilitation*.—The successful work of the vocational training branch of the Department of Soldiers' Civil Re-Establishment was commended. This branch having been abolished, the executive council suggested that efforts be made to have the different provinces enact legislation providing for the extension of workmen's compensation acts in order to give instruction for the occupational re-training of injured workmen. (8) *Immigration*.—In reference

to protests entered against private employers bringing immigrants from Great Britain, the executive council stated that the Employment Service Branch of the Department of Labour had rendered valuable assistance in checking indiscriminate importation of industrial workers into Canada. In reference to the Orientals at present in Canada, and the number still arriving, the attention of the proper authorities had been called to the matter, but the protests so far had not been successful. Replying to a letter from the president of the Congress, the report contained a communication from the Minister of Immigration stating that the department had cancelled its advertising for immigrants, the policy being to so regulate immigration as not to depress industrial conditions in Canada. Correspondence was also submitted showing that complaints had been registered against the activities of Ontario Government representatives in regard to immigration to Canada. The

executive council suggested that the labour organizations in Canada should communicate with similar bodies in Great Britain furnishing them with full information as to the conditions of employment in this country. (9) *Unemployment*.—Under this heading the executive council said:

No subject is exercising the public mind more at the present time than unemployment, and there is nothing calculated to cause revolt in the minds of the workers more than being condemned to involuntary idleness and consequent poverty. This subject has been one of growing intensity during the entire year. The system of unemployment does is not a satisfactory one to the workers, yet there are times where no alternative lies before them but to accept temporary relief of this character, if actual starvation is to be avoided.

While recognizing the entirely unsatisfactory nature of such temporary relief, your executive have co-operated to the fullest extent in having the Dominion, provincial and civic authorities relieve actual want in the manner above referred to, but at the same time have never relinquished their efforts towards securing measures which would not only relieve the present acute results of unemployment but would lead to its future elimination.

A solution of this problem is a task to which the organized workers must set themselves, and in order that the best results may be achieved from the collective thought and consideration of this convention, your executive have prepared a special memorandum, in which they have attempted to deal concisely with the steps taken in Canada and other countries towards reaching a solution of the unemployment problem. It is our desire that this memorandum along with any resolutions that may be submitted dealing with this question should be considered by a special committee of this convention and declarations be forthcoming clearly enunciating the policies that the organized workers desire to be adopted.

(10). *International Relationships*.—Reference was made to the international character of labour organization on the North American continent, many of the labour bodies having this year held their conventions in Canada. In this connection it was pointed out that the American Federation of Labour had maintained four organizers in the Dominion and that several other international or-

ganizations had had organizers operating in the same territory. In addition many of the international unions have opened accounts with Canadian banks through which their financial transactions for Canada are conducted. Referring to the International Federation of Trade Unions, a brief report of the meeting held in November, 1920, was submitted by the representatives of the Congress. The executive council pointed out that while the delegate of the Congress was unable to support most of the resolutions presented, and although the executive council had found it impossible to concur in some of the declarations of the Federation, it was suggested that there should be a continuance of affiliation with the International Federation. It was mentioned that the Federation had rendered valuable assistance in exposing the policies of the Third Internationale of Moscow and in pointing out the danger to trade unions of accepting the policies of the Moscow body. Reference was also made to the International Labour Office, established under the Peace Treaty, and to the forthcoming conference to be held in Geneva. Confidence was expressed in the director and staff of the International Labour Office in their efforts to make the organization of real benefit to the wage-earners of all countries. (11). *Canadian Brotherhood of Railroad Employees*.—Under this heading the executive council recited the circumstances leading up to the revocation of the charter of the Canadian Brotherhood of Railroad Employees; and how the action of the executive council had been upset by the decision of the courts, to which the brotherhood had appealed. The judgment of the court was complied with by the executive council and per capita tax accepted from the brotherhood, thus restoring the organization to membership in the Congress. The matter of continued affiliation of the brotherhood with the Congress was referred to the convention for consideration. (12). *Platform of Principles and Amendments to Constitution*.—The executive council

recommended that the Platform of Principles should be amended in accordance with the later decisions of the Congress, the work to be performed by the newly-elected executive council. There was also submitted a draft constitution with the object of more correctly defining its intent. (13). *Printing of Proceedings*.—The executive council also made a recommendation regarding the distribution of copies of the report of the convention proceedings, limiting the number to be supplied gratis, and suggesting a small fee for additional copies, a directory of chartered trades and labour councils in Canada to be printed in the reports. (14). *Report* was made of the remodeling of the headquarters building in Ottawa, and the property transferred to a board of trustees in accordance with the constitution. (15). *Winnipeg Trials*.—The executive council reported on the efforts put forth to secure the release of the men convicted for sedition and seditious conspiracy in the Winnipeg strike, correspondence being submitted in connection therewith. (16). *Disarmament*.—Appreciation was expressed of the movement towards a reduction of military and naval armaments, and should the Dominion Government decide to have special representatives of any section of the community form part of the delegation to the proposed disarmament conference, it was urged that organized labour should be given representation. (17). *Publicity*.—While the executive council had no complaints regarding the general accuracy of press reports of addresses and statements made on behalf of organized labour, it was pointed out that with the persistent propaganda against trade union policies, it was necessary that the Trades Congress should have an official journal. It was therefore recommended that the executive be empowered to make the necessary arrangements for such publication. (18). *Subjects Referred to the Executive by the Windsor Convention*.—The action taken in regard to these matters was reported. Attention was also called to the National Catholic

Unions in Quebec, and the activity displayed by these bodies.

REPORT OF BUILDING TRUSTEES.—The executive council, as trustees of the Congress building in Ottawa, submitted a statement dealing with the receipts and disbursements, showing that the property was free from debt and that the revenue from rentals was sufficient to cover maintenance charges.

Reports from Provincial Executive Committees

Five of the provinces in which provincial executive committees have been operating during the past year presented reports of their activities, the following being a summary:

ONTARIO: The committee on December 17, 1920, met the Provincial Cabinet and presented the legislative demands. A statement was also submitted by Mr. Jas. Ralph, the chairman, who had been appointed legislative representative for the session of the Legislature, in which he outlined the new legislation and amendments to existing laws affecting labour which had been passed by the Legislature.

QUEBEC: The committee, in reporting on the number of strikes in the provinces, stated that the National Catholic Unions, which had carried on an active campaign, in spite of their small membership, were responsible for the larger number of strikes. It was also stated that the O.B.U. movement had disappeared from the province. In January, 1921, an interview had been held with the Provincial Cabinet and legislation requested. Of the demands presented, only two had been adopted. Mr. Gus. Franco, the chairman, who had been delegated as parliamentary representative for the session of the Legislature, presented a report of his activities and the legislation enacted, special reference being made to the passage of the Municipal Strike and Lockout Act and the law respecting the inspection of scaffolding.

MANITOBA: The committee referred to the disruption in labour organization in 1919 and the slow progress in 1920 in rebuilding the movement. Much progress, however, was made in the province during 1921. In regard to the legislation which had been sought, not much had been secured, the reason assigned being the mixed complexion of the Legislature. Reference was made to the Joint Council of Industry and what it had accomplished.

SASKATCHEWAN: The committee had met the Government and presented the programme of legislation desired, and reported on what demands had been granted.

BRITISH COLUMBIA: The committee had appeared before the Cabinet and submitted requests for legislation. The report stated that of the 87 bills presented in the Legislature only ten dealt with labour problems, and only three or four of these were of major importance.

Reports from Federations of Labour

Reports were submitted from two provincial federations of labour outlining the work which had engaged their attention, the following being a summary:

ALBERTA: The annual convention was held on January 10-12, 1921, at which resolutions dealing with desired legislation had been adopted and subsequently submitted to the Provincial Cabinet for consideration. The report also contained a statement showing what number of the requests had been adopted. The report closed by stating that there was a lack of employment and that a number of organizations had found difficulty in retaining their former wage rates, a number having accepted reductions varying from 5 to 12 per cent.

NEW BRUNSWICK: The eighth annual convention was held on January 11-13, 1921, and a number of resolutions on various matters had been adopted. Those seeking legislation were, on February 9, 1921, laid before the Provincial Govern-

ment. The amendments made to existing laws were reported. Mention was made of the organization of several new unions in the province and also of the unemployment prevailing.

Reports from Fraternal Delegates

Included in the reports were statements from Mr. W. F. Bush, of Toronto, fraternal delegate to the convention of the American Federation of Labour held in Denver, Col., June, 1921, and from Mr. E. W. A. O'Dell, of Hamilton, fraternal delegate to the meeting of the British Trades Union Congress held in Portsmouth in September, 1920. Each statement contained references to the more important matters which had been dealt with by the respective bodies.

These reports, together with certain resolutions bearing on the subject matter contained therein, were referred to the respective committees which had been appointed to consider their contents.

Report of Committee on Officers' Reports

The first section of the report of the executive council on which the Committee on Officers' Reports presented a report was No. 11 dealing with the Canadian Brotherhood of Railroad Employees. The chairman of the committee, Mr. J. W. Wilkinson, explained at length the circumstances leading up to the present position of the controversy between the congress and the brotherhood, and moved the following resolution:

Whereas, the executive council of the year 1917 of the Trades and Labour Congress of Canada did charter and admit to membership the Canadian Brotherhood of Railroad Employees, conditionally, and, with the distinct understanding that the chartering of the said Canadian Brotherhood of Railroad Employees organization was in no way to interfere with the jurisdiction or membership of the bona fide international organizations chartered by the American Federation of Labour and recognized by the Trades and Labour Congress of Canada; and, whereas, the then Executive Council of the Trades and Labour Congress of Canada believed that it would be a means of having the Canadian Brotherhood of Railroad Employees consolidate with the Inter-

national Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; and, whereas, delegates of the Canadian Brotherhood of Railroad Employees were seated at the Quebec Convention (1918) subject to instructions, by resolution, to the Executive Council to open up negotiations with the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the Canadian Brotherhood of Railroad Employees for the purpose of bringing about a consolidation of the membership of these two organizations, and at the Hamilton convention (1919) protests were again entered against the continued affiliation of the said Canadian Brotherhood of Railroad Employees and instructions again given to the executive council to bring about a consolidation as above referred to, and at the Windsor convention (1920) resolution to revoke the charter of the said Canadian Brotherhood of Railroad Employees was withdrawn on the distinct understanding that these prolonged negotiations would be brought to an immediate conclusion; and, whereas, the instructions above referred to were complied with by President Moore and Secretary-Treasurer Draper and the other members of the executive council of the Trades and Labour Congress of Canada by holding of conferences at Washington, Windsor and Chicago and attending the Cincinnati Convention (1919) of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and placing the entire case in a comprehensive manner at each conference; and, whereas, it became abundantly clear that a consolidation could not be effected, the executive council of the Trades and Labour Congress of Canada, by letter on December 17th, 1920, did notify the grand president of the Canadian Brotherhood of Railroad Employees that the charter of the said organization (the Canadian Brotherhood of Railroad Employees) would be cancelled as dating from September 1st, 1920, and whereas, the grand president and the executive Board of the said Canadian Brotherhood of Railroad Employees did apply to the Ontario Supreme Court and was successful in securing an injunction restraining the executive council of the Trades and Labour Congress of Canada from cancelling the charter of the Canadian Brotherhood of Railroad Employees, on the ground that the executive council of the Trades and Labour Congress of Canada had no power, under its constitution, as at present constituted; therefore, be it resolved that the 37th convention of the Trades and Labour Congress of Canada in convention assembled, in the city of Winnipeg, Manitoba, do hereby revoke the charter of the Canadian Brotherhood of Railroad Employees on the grounds that there is a bona

fide international organization affiliated to this Congress and covering this class of workers; and on the further ground that a continuance of the affiliation of the Canadian Brotherhood of Railroad Employees with the Trades and Labour Congress of Canada would be a recognition of a dual organization, which policy the Congress emphatically declared against at its annual convention in the city of Berlin, Ontario, in 1902, and which is embodied in Article 1, Section 2 of the present constitution of the Trades and Labour Congress of Canada; and, further, be it resolved that the revocation of the charter of the Canadian Brotherhood of Railroad Employees and the cancellation of all rights and privileges previously held by the said Canadian Brotherhood of Railroad Employees in this Congress shall and does hereby become effective forthwith.

Mr. A. R. Mosher, president of the brotherhood, presented the case for his organization, urging that the resolution presented was unfair and unjust. Mr. P. M. Draper, secretary-treasurer of the Congress, spoke on behalf of the executive council, after which a prolonged debate ensued, many delegates taking part. Before the vote was taken Mr. Mosher replied to the remarks of those who favoured the revocation of the charter of the brotherhood.

On a roll call vote the resolution asking for the revocation of the charter was carried by 394 to 151, a majority of 243. While the roll was being called Mr. M. M. McLean, secretary of the Canadian Brotherhood, was associated with the poll clerk. Immediately upon the adoption of the above resolution, the following motion was submitted and approved by the convention:

Whereas, owing to the present unsatisfactory condition existing as between the Canadian Brotherhood of Railroad Employees and the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and the immediate necessity of some action being taken in the best interests of our movement; therefore be it resolved, that this convention instruct its incoming executive council to immediately take this matter into consideration and endeavour to reopen negotiations between the organizations involved with the object of bringing about a satisfactory adjustment as far as their efforts may avail and give opportunity for them to do so, subject

to the matter being left in the hands of the trade union movement and not placed under decision of the courts.

The expulsion of the Canadian Brotherhood of Railroad Employees necessitated the withdrawal of the delegates from that organization who numbered 124, one representing the headquarters and 123 representing 103 local lodges located in various parts of the Dominion.

The Committee on Officers' Reports approved of the method adopted by the executive council in regard to the annual interview with the Dominion Government and recommended that the reference to the civil service be noted. Similar action was recommended in regard to the amendments to the Dominion Election Act and the proposed amendments to the Penitentiary Act. In regard to the conventions of the International Labour Conference, the executive council was instructed to press for a conference of provincial premiers with a view of giving effect to the labour provisions of the Peace Treaty, more especially in regard to the eight-hour day. The committee recommended reaffirmation of Government control of the railway system of Canada and also favoured the scheme of the Government merchant marine. Commendation of the Prime Minister and the Minister of Labour was expressed for their defence of the organized labour movement as represented by the Trades and Labour Congress. In recommending that the executive council press for the adoption of Proportional Representation in parliamentary elections, the committee called attention to the lack of labour representatives in the House of Commons. Reporting on section No. 3, it was recommended that the charter of the Nova Scotia Federation of Labour be cancelled, and the executive council was commended for its efforts in securing uniformity in the work of provincial federations and provincial executive committees. In reporting on the reference in the executive council report as to the conditions of employment on the Welland Ship Canal, the chairman

of the committee read a letter from the Minister of Labour to the president of the Congress in regard to certain statements concerning the conditions on the Welland Canal made at Monday afternoon's session in a discussion which took place on a resolution asking for the insertion of fair wage clauses in all Federal and Provincial Government contracts. The letter from the Minister of Labour was as follows:

Winnipeg, Man.,

August 23rd, 1921.

Mr. Tom Moore,

President,

Trades and Labour Congress of Canada,
Convention Hall,

Winnipeg, Man.

Dear Mr. Moore:

Yesterday afternoon I was much surprised to receive an enquiry from a representative of the press, asking for a statement in reply to charges made against the Federal Government on the floor of the Congress yesterday, respecting unfair treatment of workmen employed on the Welland Ship Canal construction.

My information is that it is stated the Government are calling for tenders and letting the work by contract without including in the contract any fair wage clause; that a ten-hour day is being enforced and without payment for overtime. In addition to this, that drastic cuts are being made in wage rates.

If any delegates at the Congress were in receipt of any such information, it is difficult to understand why they found it advisable or necessary to ventilate their grievance without at least enquiring of me, while in this city, as to whether or not there was any truth in the report.

Yesterday afternoon I sent word by messenger to the convention hall, stating that if the delegates there who have made this complaint would come to see me, I would be glad to inform them fully as to what was being done, and correct the entirely erroneous impression which their remarks must have given to the delegates of the Congress. Up to 9 o'clock this morning no one has appeared in response to that invitation. I therefore beg to submit to you, for the information of the delegates to the 37th Annual Convention of the Trades and Labour Congress a statement of the facts, as I do not believe that either the executive or delegates present at this convention desire to act on any question without being fully informed of the facts.

Work on the Welland Canal was of necessity entirely suspended during the war, and should have remained closed down for at least a period of two years after the Armistice, having regard to the financial obligations of the country at a time when material and wages were abnormally high. The Federal Government desired to do everything possible to employ and absorb as many of the men demobilized from military and other war service as possible, and it was decided to open up work on the Welland Canal, even though it temporarily entailed greater expense. A substantial number of men have ever since found employment on this work.

In 1919, strong representations were made in support of a request for the application of an eight-hour day, which request was respected and granted, but was followed by a strike of a substantial portion of the men employed as a protest against the action taken in establishing an eight-hour day on the work. This difficulty was overcome by permitting the unskilled labourers who desired to work ten hours per day to do so, and certain of the skilled trades, who unanimously wished to work only the eight-hour day, to continue to work on that basis.

I am quite aware that controversies have arisen from time to time as to prevailing rates, and were difficult to at all times satisfactorily adjust because of the great variation of rates in the same trades that were to be found in that district. The rates generally prevailing, however, have been the rates paid on the hydro power canal projects, which were, I think, recognized to be the highest rates anywhere in that territory. Recently the hydro people reduced the rates of all their skilled workers ten cents per hour and the rate for their unskilled labour being 35c. which is the general prevailing rate in that territory for unskilled labour. The Department of Railways and Canals have decided this year to now complete the Welland Canal by contract, and tenders on sections 1 and 2 have been called for, while tenders on section 3 will be called for in the not distant future. Meanwhile the Department feels that there is no justification to continue to pay rates substantially in excess of those prevailing throughout that whole district, and have decided, with the approval of the Department of Labour, to put into effect a reduction to the general prevailing level, except as to unskilled labour. The Department contends that there is no justification for imposing a larger cut in the rate of unskilled labourers than is imposed on other men employed, and insisted on a minimum rate of 40c. per hour for unskilled labour employed on the Welland Ship Canal, notwithstanding the fact that a 35c. per hour rate generally prevails throughout that district and has recently been made applicable on the hydro

work. It has been furthermore definitely decided that there shall be no changes in the hours of labour or rates of pay for overtime, and that all working conditions now existing shall continue in effect. When the contracts are let the usual general fair wage clause will be incorporated in them.

Notwithstanding any information that the convention, or any of its delegates, may have received to the contrary, the above is a true statement of the facts surrounding the Welland Ship Canal matter, and I hope that whenever any labour organization feels it has any complaints against the Department of Labour that before ventilating that complaint, and taking up the time of your Congress, it will have the courtesy to bring the matter to the attention of the Department of Labour.

(Sgd.) G. D. ROBERTSON,
Minister of Labour.

Discussion on the subject was continued, many delegates taking part. Delegate Bruce, of Toronto, introduced a telegram which had been received by Delegate J. A. McClelland from Mr. R. Riley, business agent of the International Association of Machinists, regarding wage rates being paid on the canal works. The telegram was as follows:—

Aug. 25.—All employees cut 20 per cent on Sec. 3. Machinists' rate now 65 cents; carpenters forced to work last Sunday straight time. Labourers receive 30 cents; on Sec. 1, subcontract Sec 5, working 12 hours, labourers 25 cents, brakemen, 30 cents, engineers, 50 cents.

NOTE.—It should be pointed out that the reduction mentioned in the forepart of the above message on Sec. 3, work on which is being done by the Department of Railway and Canals, is that mentioned in the letter of the Minister of Labour and as affecting the skilled tradesmen. It might be further explained that the carpenters who worked on Sunday did so at their own will rather than remain idle on the following Monday when the engineer in charge proposed to make some necessary repairs which would not permit of all the men being employed on that day. As regards the wages on Sec. 1, sub-contract 5, this work is not being done by the Department of Railways and Canals.

The report of the committee on officers' reports on this subject recommended that the executive council be instructed to request the Dominion Gov-

ernment to establish permanently the supreme right of the Department of Labour in investigating and determining the rates of wages and general working conditions to be observed in all government contracts, sub-contracts and undertakings financially assisted by the Government, whether of the character of public works or the furnishing of supplies for the various Government departments. It was further recommended that the executive council prevail upon the Government to forthwith establish the eight-hour day, not interfering with a shorter work day upon one day of the first six days of the week where such already exists upon the Welland Canal, notwithstanding the action of any section of workmen engaged thereon, and in conformity with the Government's commitment in the labour clauses of the Versailles Peace Treaty. The committee approved of representatives of the Congress on public bodies, and recommended that more money be granted by the Government for the Advisory Council for Scientific and Industrial Research. The committee also recommended the continuance of the National Council of Health and the National Council of Education, and approved of the Canadian National Council of Child Welfare. In reference to Section 6 — Industrial Councils — the committee commended the letter of President Moore outlining the attitude of organized labour on this subject and urged that industrial councils be opposed where they would interfere with the work of, or be used as a substitute for, trade unions. Dealing with section 10, the committee recommended continued affiliation with the International Federation of Trade Unions. Full co-operation with the International Labour Office was also recommended and approval expressed at the growth and the financial arrangements of international unions in Canada. The balance of the report of the executive council, together with the various recommendations were concurred in by the committee. The re-

ports of the Provincial federations of labour and the provincial executive committees, along with the reports from the fraternal delegates, were approved by the committee, and the convention adopted their report as a whole.

Report of Secretary-Treasurer

Mr. P. M. Draper, the secretary-treasurer, in submitting his report for the year, stated that the paid up membership of the congress was 173,778, a slight increase over last year. Owing to the prevailing unemployment many members of affiliated organizations were behind in their dues, which correspondingly decreased the membership of the Congress, which, if all members of its affiliates were included, would be approximately 225,000. He also reported re the accommodation of the headquarters building. Six trades and labour councils and two federal unions had been chartered. International organizations which had affiliated their Canadian membership during the year were the International Brotherhood of Stationary Firemen and Oilers, International Brotherhood of Teamsters, and Order of Railroad Telegraphers, and the International Union of Laundry Workers had recently applied for affiliation. The total receipts for the year, including the balance from last year, the sale of Victory Bonds and the transfer of \$10,000 from reserve to the general account, amount to \$49,446.88; expenditures, which included cost of remodelling office building, totalled \$47,881.64, leaving a balance of \$1,565.24. The report, which was referred to the Audit Committee was adopted without any discussion, the secretary being complimented on the work of his office.

Report of Committee on Constitution and Law

To the Committee on Constitution and Law were referred certain sections of the report of the executive council, including a re-draft of the constitution, as well as six resolutions seeking to have

changes made in the laws. On Section 12 of the executive council's report on redrafting of platform of principles, the committee concurred, and recommended that the executive council be instructed to make the necessary changes. The various articles of the re-drafted constitution were considered seriatim, and in the main were adopted with little or no change. The new constitution sets forth clearly the objects of the congress; what organizations are eligible for affiliation, and clarifies the position of the executive council in regard to its powers in suspending from membership any affiliated or chartered body.

The remuneration of members of the credential and resolutions committees was set at \$7 per day and hotel expenses for the days worked prior to the opening of the convention.

All resolutions are hereafter to be printed in French as well as English and must be forwarded at least twenty days previous to the opening of the convention.

The date of holding the annual convention is left in the hands of the executive council.

Per capita tax of provincial federations and trades and labour councils is, as formerly, to be paid in two annual instalments, but the periods of payment are now December 30 and June 30, and the tax from international and national organizations is to be paid monthly.

The constitution as reported by the committee having been adopted, no action was taken on the six resolutions mentioned above.

Report of Union Label Committee

One of the regular committees of the Congress is that on union labels, to which all resolutions on this subject are referred. The committee recommended concurrence in a resolution seeking to have the Government and building trades unions use union-labelled shovels on all work where such implements are required.

The committee also reported favourably on the following resolution:

That the executive of the Trades and Labour Congress of Canada be requested to communicate with all Trades and Labour Councils also building trades councils in Canada urging upon them the necessity of forming union label leagues for the purpose of promoting the use of the union label on articles manufactured, and that all label leagues and committees keep the executive council informed of manufacturers using various labels, and also to encourage women's label leagues.

Support to the striking cigarmakers in Hamilton, London, Montreal, Vancouver and Stettler was urged, the committee recommending reaffirmation of the resolutions adopted by the Congress in 1920, which urged the members of organized labour to purchase only those cigars which have the cigarmakers' blue union label on the box.

The committee reported on the examination of the credentials of the delegates, which showed that the articles of union made clothing worn by those present were as follows: Hats, 228; caps, 57; underwear, 163; socks, 98; suspenders, 105; belts, 23; neckties, 105; suits, 149; overcoats, 63; collars, 85; shoes, 298; gloves, 53; cuff links, 16; arm bands, 21; garters, 45, and 131 did not specify wearing any union labelled articles of clothing. In this connection the committee stated that the procedure adopted at the Hamilton and Windsor conventions re marking of labels on credentials is not a true reflex of the use of the label as there are many delegates who purchase articles bearing union labels whenever possible, but their credentials are not marked indicating the union articles they wear. The committee was therefore of the opinion that this form should be discontinued and the following in large type on the front of the official credential substituted: "Delegates and members are requested to demand and purchase at all times union label goods and do all in their power to promote the use of the union label wherever possible."

The committee recommended that the executive council should continue its efforts to secure legislation legalizing and assuring protection to registered trade union labels.

Attention was drawn to union-labelled paper, and it was requested that the delegates have their local unions use this paper for their printed matter, also that the executive council endeavor to have union labelled paper made in Canada.

It was also reported that all articles sold by the co-operative stores in Great Britain bear the union label or are union-made. The committee therefore urged the membership of the Congress to do all in their power to promote the co-operative movement in Canada along similar lines.

Referring to the open shop campaign the committee stated that the union-label trades such as the printers, cigarmakers, boot and shoe workers, and the hotel and restaurant employees were suffering most from this agitation, and urged that the members use their purchasing power in the interests of these bodies.

The committee recommended that more loyal support be given to the authorized labour press, having regard for the fact that the necessity of more accurate information regarding the activities in the trade union movement is one of the most urgent needs at the present time to combat the publicity campaigns being carried on in some of the privately-owned newspapers by the enemies of organized labour. It was further recommended that all trades unionists be urged to subscribe for the authorized labour papers in their respective localities and give their sympathetic support in securing legitimate advertising to meet the financial requirements of labour papers.

A very interesting discussion took place on this report, it being vigorously urged that a more insistent demand should be made for union-labelled goods and a greater propaganda carried on. The report was adopted.

Appropriations

The Committee on Ways and Means recommended the following appropriations, which were approved: Allowance to the fraternal delegate to the British Trades Union Congress, \$1,000; to the fraternal delegate to the American Federation of Labour, \$600; to the messenger, sergeant-at-arms and caretaker, \$50 each; associate secretary, \$100; translator, \$80; also payment of hotel expenses of the two fraternal delegates.

Unemployment and Immigration

The executive council submitted a special 16-page pamphlet entitled "Memorandum on Unemployment, etc." This publication, together with a section of the regular report of the executive council dealing with unemployment and six resolutions on unemployment and three on immigration, was referred to a special committee on Unemployment and Immigration. The report and recommendations of the committee in connection with unemployment as finally adopted were as follows:—

1. UNEMPLOYMENT.

While presenting its suggestion for immediate aid to the unemployed organized labour feels that it should offer some large scale plan that, when carried out, will do much to lessen the number of unemployed, even though its adoption will not be a complete solution of the problem itself.

Under the present system of production for profit, instead of for service, it is recognized that there will always be unemployment. But much can be done to make the problem less acute, the problem is world wide and has been the subject of investigations and many conferences, but yet remains unsolved, though considerable amelioration has been achieved by legislation creating unemployment insurance in most European countries.

Unemployed labour is both a loss and a danger to the community. Unemployment means

(1). Suffering. (2). Lowering of the standard of living. (3). Impaired vitality and efficiency. (4). A tendency to become unemployable, dependent, degraded. (5) Waste to society.

2. ITS EXTENT.

In the Dominion of Canada periods of unemployment are becoming, at more frequently recurring periods a more serious problem, and during the past year unemployment has existed to an acute degree with no relief yet in sight. Authentic statistics as to its actual volume are

not available for this country, the most reliable, undoubtedly, being those compiled by the Employment Service of Canada, based upon three sources of information, namely, returns from employers, returns from trade unions and statistics compiled of those registering in the public employment bureaus throughout the Dominion.

It was estimated, in July 1920, that one million people were employed in industrial pursuits in the Dominion of Canada, and in July 1921, this number had already shrunk by twenty per cent, or roughly two hundred thousand employees. Some of these may be now engaged in agricultural work, whilst on the other hand the natural growth of population and the additions of numbers of immigrants who have entered the country during the period must be taken into account, and a conservative estimate would place the number of unemployed at this time at approximately one hundred and seventy-five thousand people. With the curtailment of many activities, owing to the climatic conditions and its resultant additions to the ranks of the unemployed, the magnitude of the problem may be gauged.

3. THE UNEMPLOYED.

The unemployed consist of:

(a) Those who have latterly been in definite situations of presumed permanency such as civil servants, factory and clerical workers.

(b) Those who, normally, in their own trades shift from job to job and from one employer to another, such as workers in seasonal occupations.

(c) Those who normally earn a bare subsistence by casual jobs such as dock workers and lumber jacks.

4. SOME CAUSES OF UNEMPLOYMENT.

Many opinions have been expressed as to the cause of the present deplorable situation. With the very close inter-relationship of trade between civilized countries, worldwide conditions undoubtedly play an important part, and unemployment, with its resultant loss of purchasing power of the masses in any country, quickly reflects itself on the employment situation in another country. In Canada, the Labour Department has published the statement that the wages of the workers have already been reduced on an average of over ten per cent during the past few months, whilst the retail prices of commodities have not shown the same proportionate decrease. This of itself means a decreased purchasing power in the home market and has caused further unemployment. The control of capital by a comparatively small number of people and the restriction of credits, except at high rates of interest, has hindered the development and continuation of industry. The increased purchasing power of the fixed monetary interest on war loans and their consequent enhancement of value has created a diversion of investment to this kind of security in preference to investments in building and industrial enterprises. Profiteering in the necessities of life, also specul-

ation in the natural resources, not only of this Dominion of Canada but of every country in the world. Many other causes have contributed their share towards the present situation, but these, in our estimation, are of paramount importance.

Therefore, after a prolonged and searching survey of this most important question, your special Committee on Unemployment and Immigration respectfully submit the following resolution for your consideration and action:

"Whereas, the problem of unemployment throughout the Dominion of Canada is acute, and with the approach of winter threatens to become still more serious, and whereas the presence in our midst of great numbers of men forced out of employment and into involuntary poverty constitutes a grave menace to our national well being; and, whereas, the methods hitherto used to meet these conditions having been hasty, temporary, localized and totally inadequate to effect any permanent improvement, therefore, be it resolved that this Trades and Labour Congress of Canada, in convention assembled, lays down the principle that the first charge upon industry is of right and ought to be the adequate maintenance of the workers engaged in it; and whereas the Federal Government was a signatory to the principle of unemployment insurance at the Washington conference, we therefore call upon the Federal Government to fulfil the promise made to the Congress executive that the conference would be called to deal with this question, and that they immediately call a conference of representatives of the Provincial Governments, Municipal Councils, of Organized Labour, as represented in the Trades and Labour Congress of Canada, and employers in the larger industries, to prepare a plan of unemployment insurance.

Be it further resolved, that in the interim period between now and the time that permanent machinery is set up by the Federal and Provincial Governments to cope with the unemployment situation this congress request that the Federal Government:

1. Restrict and guard against unwarranted immigration.
2. Enact an eight-hour day, at least, for their own employees.
3. Construct necessary public works such as Custom houses, post offices and other public buildings which are badly needed in many cities and towns throughout the Dominion.
4. Renew and repair all public buildings.
5. Continue money grants for immediate needs.
6. Make housing loans to the extent of \$50, 000,000 to aid the various cities and towns to construct working class houses.
7. Overhaul all rolling stock, etc., on the Government railroads, also all other equipment belonging to the various spending Departments of the Federal Government.

Be it further resolved, that this Trades and Labour Congress of Canada through its Provincial Executives request the several Provincial Governments to:

1. Engage in road building on a large scale.
2. Repair and renew old public buildings and construct necessary new ones.
3. Afforestation.
4. Develop agricultural lands.
5. Make a money grant for immediate needs.

Be it further resolved, that this Trades and Labour Congress of Canada request the Central Labour Councils throughout Canada to help in relieving the present unemployment situation by getting their Municipal Councils to undertake at the earliest moment the construction of sewers, water mains, roads, schools, fire halls and other necessary public buildings, and also to make a money grant for immediate relief.

Your Committee further recommend that all of these resolutions should emphasize the fact that all of these works and undertakings should recognize the prevailing rates of wages and should not be classed as a charity.

Your Committee further recommend that in the event of any of the Provincial Governments or Municipalities refusing to co-operate in the measures set forth in the resolution, or refusing to assume their fair share of the responsibility in relieving these conditions, then the Federal Government shall itself use all its constitutional powers to obtain their co-operation, and failing in that, should itself institute measures of relief adequate to meet this local situation.

Your Committee further suggest that in view of the fact that in some instances large industries have been closed down, thereby extending unemployment, we are of the opinion that the Congress Executive should use every effort to secure legislation exercising control over these conditions.

We further recommend that the Trades and Labour Congress again place itself on record as in favour of the abolition of all employment bureaus other than those under the jurisdiction of the Dominion and Provincial Governments and strongly urge the organized workers of Canada to use to the fullest extent the Provincial Employment Bureaus.

We further suggest that the various Governments reserve all construction and public works, as far as practicable, for periods of unemployment and for districts most affected by it.

We further recommend that the Congress Executive do all in their power to obtain legislation which will debar private employers from recruiting workers outside of Canada.

In conclusion your special committee on unemployment desires to commend the various Provincial Governments who have set up Advisory Councils on Unemployment in their respective Provinces and sincerely hope that all other Provincial Governments will do likewise to meet this serious crisis.

Your Committee further recommend that the Executive of the Congress, Provincial Executives and Federations of Labour should continue to fully co-operate with the Employment Service Council of Canada.

IMMIGRATION.

On this subject the special committee made the following report and recommendations, all of which were approved:—

For the past twelve months throughout the Dominion of Canada, there has existed a serious unemployment situation, a solution for which is not in sight in the immediate future. Efforts are now being made in various quarters to induce immigrants to come to Canada from European and other countries, whose advent will mean additional hardship to citizens of Canada by reason of proportionate extension of unemployment. Some of the immediate results of the present immigration policy can readily be seen by the large numbers of newly arrived immigrants who are continually applying for charity, through no fault of their own, and in many cases due to direct misrepresentation in reference to the employment situation and the rates of pay prevailing in Canada, evidence of which submitted to your Committee fully sustains the foregoing. Therefore be it resolved, by the Trades and Labour Congress of Canada in convention assembled, that realizing the serious unemployment prevalent in Canada at this time, we hereby recommend to this 37th Annual Convention that we call upon the Federal Government to institute a new policy of immigration including the following provisions.

(a) Absolute prohibition of all immigration from European countries for a period of two years at least, with the exception only of exempted classes.

(b) Total permanent exclusion of all Orientals, and that the Executive be instructed to press for the necessary notice of cancellation of that clause covering Japanese immigration in the Dominion of Canada, in the Anglo-Japanese Treaty expiring in 1923.

(c) Federal statutory legislation making it beyond the right of private individuals or corporations to distribute literature, or information of any kind by way of lecturers, agents, etc., calculated to induce non-agricultural workers to emigrate to Canada.

(d) Federal statutory legislation making it legal for the Government of Canada to deport any individual who has entered Canada under the exempt classes regulations, and who within a period of twelve months from the date of entry into Canada, is found working at some other occupation than that designated as their avocation when applying for entry into Canada.

(e) Federal statutory legislation which will legalize the appointment of a Commission to thoroughly investigate the question of Oriental immigration into Canada.

Your Committee desires to bring to the attention of the Congress the action of the Canadian Senate with reference to the deportation of British subjects without trial, in spite of the fact that the said legislation received the unanimous

approval of the House of Commons, and we recommend that the incoming executive of the Congress press for the removal of this most pernicious legislation.

Your Committee notes with satisfaction the efforts of the executive council in obtaining legislation which now places accredited representatives of the international trade unions in the non-immigrant class and they are now allowed free entry into the Dominion. To appreciate the value of this legislation it is only necessary to draw your attention to the case of Organizer Hickman, in connection with the strike at the Beaver Board Plant, Thorold, Ontario.

Your special committee further recommend that the Congress continue its representation on all boards dealing with immigration and urge that they do not relax their vigilance.

We further recommend that the various international unions communicate with their sister unions in the British Isles, and advise them from time to time of the trade conditions prevailing in their respective crafts in Canada.

Your committee further recommends that the executive of the Congress continue to press for the setting up of a Central Immigration Empire Board with labour representation on same, nominated by the Trades and Labour Congress of Canada.

Your committee is pleased to note that the officers of the Congress have communicated with C. W. Bowerman, Secretary of the Parliamentary Committee of the British Trades Union Congress, relative to the misrepresentations indulged in by Canadian employers of labour when inducing workers to leave the British Isles. This was further supplemented by the work of Fraternal Delegate O'Dell, who took up the subject matter with the officials of the British Trade Union Congress and the Government immigration officials.

Report of Committee on Resolutions

Besides the resolutions which were referred to other committees, approximately 65 dealing with a variety of subjects were submitted to the Committee on Resolutions for consideration and report. The first resolution on which the committee reported at the afternoon session of the first day was No. 54, presented by Sydney Lodge No. 1 of the Amalgamated Association of Iron, Steel and Tin Workers and Glace Bay Lodge No. 4520 of the United Mine Workers. The full text of the resolution was as follows:—

Whereas, J. C. Watters was elected by the Ottawa and Quebec conventions of the Trades and Labour Congress of Canada as first choice to attend the Labour Peace Conference; and

whereas a credential was refused him by President Moore as a delegate to such conference; and, whereas, in order to give effect to the mandate of the Congress as the supreme power in the case as against the usurpation of power by President Moore, he sailed without credentials to the conference, but took with him the reports of the proceedings of the Ottawa and Quebec conventions of the Congress, together with all correspondence dealing with the matter, and wired Vice-Presidents Baxter and Rees to sign credentials and send same on to conference to establish his right to sit as a delegate; and, whereas he was delayed a week in sailing by waiting for credentials only to find on arrival in London that the delay of a week had caused him to be five days too late to attend the conference, which had opened a week earlier than his information led him to expect; and, whereas his report and his expense account were placed in the hands of the secretary for submission to the Hamilton convention of the Congress, but same were never presented, hence the convention had no opportunity to take action on either his report or expense account; therefore be it resolved by the Trades and Labour Congress of Canada, in regular convention assembled, that the expense account, amounting to \$1,217.45, together with interest at 3 per cent, of J. C. Watters, in an effort to carry out the mandate of the Congress by attending the Labour Peace Conference, be paid forthwith.

The committee recommended non-concurrence in the resolution. Before the question was put a delegate moved the previous question (the adoption of which would have precluded any debate). It was decided, however, to recommit the resolution to the committee with instructions to report and produce all possible correspondence on the subject of the resolution, the question to be a special order of business for the session of the following morning. At this session the committee again recommended non-concurrence. Mr. J. C. Watters, who is an ex-president of the Congress, was given all the time he desired to present his case to the convention. In his statement he read the correspondence which had passed between himself and President Moore in reference to attending the Labour Peace Conference, and accused the president of thwarting the will of the Congress in not giving him the necessary credentials as a delegate; and also made accusations against the executive council for not presenting his expense account and report of his work overseas to the Hamilton convention in 1919. Mr.

Moore, the president, in reply to Mr. Watters' charges went fully into the question, and pointed out that this matter was brought before the 1919 convention in the report of the executive council wherein it was stated that Mr. P.M. Draper, who was then in England, and who was the second choice as the Congress representative, had been named to attend the Labour Peace Conference. This was done on account of Mr. Watters, who was notified of the date of the conference, signifying his inability to leave on such short notice. The 1919 convention confirmed the action of the executive council, thus refusing to receive Mr. Watters' report or allow any sum for expenses incurred. At the Windsor convention in 1920 the delegates refused to hear Mr. Watters in regard to his complaint against President Moore in connection with the same matter, the vote being 101 in favour of allowing Mr. Watters to speak and 235 against. After a discussion in which several delegates took part, Mr. Watters was given ten minutes in which to conclude the debate. The report of the committee disapproving of the resolution was adopted by a large majority.

FAVOUR AN EIGHT-HOUR DAY.

There were four resolutions presented asking for legislation to establish the eight-hour day. The Committee on Resolutions recommended approval of the following, which covered the remaining three:—

Whereas as unemployment is ever increasing there is a tendency to increase the hours of labour which make unemployment worse; be it resolved, that this convention go on record calling upon the Government to establish an eight-hour day and forty-four hour week.

The report was adopted without discussion.

A resolution was adopted pledging support to the printers in their strike for the 44-hour week and urging the delegates in their various localities to divert all printing possible to the fair shops.

FAIR WAGE REGULATIONS.

Four resolutions asking that fair wage clauses be inserted in all Government contracts were presented. The committee offered the following as a substitute, which was adopted:—

Resolved that the Trades and Labour Congress of Canada, in convention assembled at Winnipeg, be requested to do all in its power to ensure the insertion of the fair wage clause recognized by the labour unions in the various localities in all contracts and sub-contracts for work given out by the Federal or Provincial Governments; whether they be direct, by subsidies, or financially assisted in any way whatsoever.

A resolution having reference to the conditions of employment on the Chip-pawa Power Canal was submitted, the preamble to the resolution reciting a list of grievances said to exist. The demands included the appointment of a representative of labour on the Ontario Hydro Commission and the adoption of a fair wage clause for all Provincial Government work. The committee recommended adoption of the resolution minus the preamble. Strong objection being made to this proposal, the resolution and preamble were on motion adopted as presented.

OPPOSED TO MEMBERS OF PERMANENT FORCES COMPETING WITH CIVILIANS.

By the adoption of the following resolution the Congress went on record as being opposed to members of the permanent forces accepting engagements in competition with civilians:—

Resolved, that hereafter no enlisted man in the active service of the Canadian army, navy and marine corps, respectively, whether a non-commissioned officer, musician, or private, shall be permitted, detailed or ordered to leave his post to engage in any pursuit, business or performance in civil life, for emolument, hire or otherwise, when the same shall interfere with the customary employment and regular engagement of local civilians in the respective arts, trades or professions. Insuring compliance with the spirit of this prohibition in so far as it applies to army bands, neither the mere assertion that it is not intended to employ other musicians, nor the fact that the army bands are to furnish music without emolument, should be accepted.

Another resolution asking for legislation prohibiting bands of the regular army, navy or marine corps from competing with civilian bands was also submitted, but no action was taken, the subject being covered by the adoption of the above resolution.

FAVOUR ONE VOTE ONLY ON MONEY BY-LAWS.

The following resolution seeking to abolish plural voting in money by-laws submitted in Ontario municipalities was adopted without discussion.

Whereas, under the Municipal Act of the Province of Ontario a ratepayer voting on money by-laws is entitled to one vote in every ward of the municipality in which he is assessed as the owner of property; and, whereas, this system of plural voting is unfair, in that it gives to the man who owns property in several wards an advantage over the man whose property is all in one ward, though it may be greater in value than that of the first; therefore be it resolved that this Trades and Labour Congress of Canada respectfully ask the Legislature of Ontario to amend the provision of the Municipal Act so as to place the voting power of ratepayers on money by-laws on the same basis as that of electors at municipal and Parliamentary elections—that is, one man, one vote.

WANT ELECTION ACT AMENDED.

While approving of the following resolution, the Committee on Resolutions recommended that the Congress re-affirm the previous demand that election day be declared a general holiday.

Resolved, that the Trades and Labour Council of Toronto respectfully urge the executive of the Trades and Labour Congress of Canada to do all in their power to have the Dominion Elections Act amended so that Section 15 of the Act will make it compulsory on all employers of labour to post in a conspicuous place or places through their plant or works at least fourteen days prior to every general election, by-election or referendum, copies of section 15 of said Act which stipulates that every employer shall on polling day allow to every elector in his employ at least two additional hours other than the noon hour, for voting, and no employer shall make a deduction from the pay of any such elector, nor impose upon or exact from him a penalty by reason of his absence during such hours; and be it further resolved that this Act be amended exempting this clause from the modifying powers of the chief electoral officer,

as outlined in section 101 (1) of the Dominion Elections Act.

REQUESTS FOR PUBLICITY DEPARTMENT.

Three resolutions requesting the establishment of a publicity department and two asking for the organization of a bureau of research and statistics by the Congress were on recommendation of the Committee on Resolutions referred to the executive council with power to carry out the demands of the resolutions in such manner as the members deem advisable. While the matter was under consideration several delegates pointed out the urgency of the executive council doing all possible to establish the departments named, the opinion being expressed that the local unions would supply sufficient funds to meet the necessary expenses.

APPROVE OF HEALTH INSURANCE.

The Congress by the adoption of the following resolution endorsed the establishment of health insurance by the Government:—

Whereas, the worker's wages are based on the bare necessities of life, making no allowances for medical attention and loss of time through sickness, often leaving the worker and his family in a destitute condition and prolonging his incapacity, often causing death or unnecessary suffering to him and his family; be it therefore resolved, that this convention go on record calling upon the Government to establish health insurance.

A resolution presented recited that a system of physical examination of workers had been instituted by a Hamilton company, whereby men were graded into classes, similar to those in the army; that several members of the International Association of Machinists had been refused employment on account of trivial physical defects, and that these same men had worked long hours during the four years of war, making no complaint, in order that the supply of munitions should be expedited. Fearing that other firms might adopt similar examinations, the convention instructed the executive council to take up this

question with the Federal and Provincial Governments with a view of affording protection to all workers, whether physically perfect or not, by unemployment or disability insurance.

OLD AGE PENSIONS.

Four resolutions asking for the establishment of old age pensions by the Government were received and referred to the Committee on Resolutions. The resolution which was recommended and adopted was as follows:—

Whereas there is no margin between the wages of the workers and the cost of living, making it impossible to provide for old age and infirmity; and, whereas from time to time the old and destitute are being sent to our jails for shelter; be it therefore resolved, that this convention go on record calling upon the Government to pass an Old Age Pension Act such as is in force in other parts of the Empire.

WORKMEN'S COMPENSATION.

The convention adopted a resolution requesting that the Manitoba Compensation Act be amended to cover all classes of workers, industrial or otherwise.

The executive council and the provincial executive committee were by resolution instructed to approach the Provincial Governments with a view of having uniform compensation laws enacted in all the provinces of Canada.

CIVIL SERVICE AFFAIRS.

Favourable action was taken on a demand for establishment by the Dominion Government of a national industrial council in the civil service together with departmental councils for the various departments, similar to the Whitley Councils as adopted in the Government service of the United Kingdom. Another proposal adopted was to the effect that immediate steps be taken properly to grade the service and to define the duties of each position or class of positions and to raise salary scales to an adequate standard, (2) that this work be done with a view to the abolition

of the bonus system upon its completion, and (3) that the new classification be carried out by a national council as mentioned above.

The convention also approved of the following resolution in regard to re-organization of the Dominion civil service:

Whereas, organization of the civil service of Canada is both desirable and necessary; and, whereas this undertaking could best be carried out co-operatively by the Government and its employees, in consultation with duly qualified advisers; be it resolved, that the arrangements entered into between the Government of Canada and the former members of the firm of Griffenhagen and associates, or any other foreign self-styled experts, by which they are to reorganize the Federal civil service be terminated forthwith, and that for the purposes of reorganization of the civil service there be established in each Department boards composed equally of representatives of the Government, including the Civil Service Commission, and the employees, assisted in an advisory capacity for each class of employment by representatives of the same profession or calling in private employment, and not by so-called efficiency experts.

By resolution it was decided that, it being essential that all government employees should be organized, the Congress should assist in forming a national organization of such employees. A resolution was also adopted endorsing the policies and efforts of Federal Union No. 66 in its attempt to better civil service conditions, and instructing the executive council to ask for recognition of this union by the Government. It was further decided to ask that in examinations for positions in the civil service of a mechanical nature applicants should only be examined in the subjects necessary for the said positions.

ONCE MORE OPPOSE INDUSTRIAL UNIONISM.

The Committee on Resolutions recommended non-concurrence in the following resolution which sought to commit the Congress to the industrial form of organization:—

That in order to fully and efficiently protect our economic status, and to more easily conform to modern conditions in industry, this Trades and Labour Congress of Canada, in convention

assembled, go on record as being in favour of organization by industry; and further, that this Congress use its influence to have this matter considered at all the international union conventions and the American Federation of Labour with a view to having the expression of the rank and file by referendum.

The promoters of the resolution, who hailed from Sault Ste. Marie, spoke strongly in favour of its adoption, but the delegates voted it down by an overwhelming majority.

OBJECT TO MILITARY TRAINING IN SCHOOLS.

The resolution following, submitted by the Edmonton Branch No. 120 of the United Garment Workers was adopted without discussion:—

Resolved, that we the United Garment Workers of Edmonton do hereby protest in the voice of unionism through the Trades and Labour Congress of Canada against any and all preparations for war, or any military training whatsoever for our boys in schools, boys' societies or otherwise, under the age of eighteen years; and, further be it resolved, that we ask the Trades and Labour Congress of Canada to take steps to protect the mothers and boys of Canada by all means in their power from another war that can bring nothing but misery and suffering to humanity, especially the working class; and, be it further resolved, that the delegates of the aforesaid Congress be asked to give as much publicity to this resolution as possible as well as lend their united support to this motion.

AGAIN FAVOUR LIGHT BEER.

At each convention of the Congress since 1918 the delegates have gone on record as in favour of a beverage containing not more than 2½ per cent alcohol by weight. The Congress reaffirmed its former decisions by adopting the following resolution:—

Whereas, the Trades and Labour Congress of Canada has, from year to year, gone on record in favour of a better beer for the working man and have asked the Federal and Provincial Governments to enact legislation declaring that beverages containing not more than 2½ per cent alcohol, by weight, being non-intoxicating, could be sold anywhere by anyone without a license; and, whereas, in the recent referendum in Ontario the vote in the workmen's centres was strongly registered against prohibition, and whereas under the existing Ontario Temperance

Act native wines containing from 25 per cent to 35 per cent proof spirits are being legally manufactured and sold in large quantities in Ontario, with few restrictions, whilst the sale of beers of one-tenth their strength is prohibited; therefore, be it resolved, that the Dominion and Provincial Governments be again petitioned to enact legislation whereby it may be legal to manufacture and sell, anywhere in Canada, any beverage not exceeding $2\frac{1}{2}$ per cent of alcohol by weight, and that in addition, in the cities and towns of Ontario light beer and wine licenses be issued so that the working man may be able to secure a healthful, refreshing and harmless beverage.

DESIRE TO KNOW LOSSES CAUSED THROUGH IDLENESS.

The following resolution, which was adopted, seeks to have the Department of Labour furnish figures showing the time and monetary losses occasioned through the closing down of industry:—

Whereas, a detailed report of the losses entailed to the country and production through strikes and lockouts is contained monthly in the *Labour Gazette*; be it therefore resolved, that this Trades and Labour Congress of Canada in convention assembled, do hereby request the Department of Labour to also include in the *Labour Gazette* a report of the losses entailed to the worker in money and unemployment, not of his own creation, but brought about through over production and a wish to lower the wages of the producers.

OTHER RESOLUTIONS ADOPTED.

Resolutions bearing on subjects mentioned below were reported upon favourably by the Resolutions Committee and adopted, no account being taken of those which were non-concurred in by the convention.

Asking for an audit of the cost of ships recently completed in the yards of the Dominion Shipbuilding Company.

In favour of the double-platoon system for paid fire fighters, twelve hours per day and the week's work not to exceed 72 hours.

Objection to employees of the Canadian National Railways being debarred as candidates for Provincial and Federal Parliaments.

Opposition to the use of spraying machines in applying paint, their use being

detrimental to the health of the workers.

In favour of all kitchen help and those employed in the preparation of food being periodically medically examined.

In favour of legislation for compulsory inspection of meat and the complete destruction of all animals affected with any disease.

In favour of the employees of the National Railways having representation on the board of directors.

In favour of the executive council asking the various railway companies of Canada to give reduced rates for all delegates to any convention.

Requesting the executive council to inquire if the Government at Ottawa intends to allow the departments to continue to use the multigraph printing machines; and if so, to request that a multigraph department be established at the printing bureau.

In favour of asking the Railway Commission to require that not less than four men and foreman be continuously employed on section work.

In favour of prohibiting the employment of white girls and Asiatics in the same establishment; and also prohibiting the employment of white girls by Orientals.

In favour of permitting municipalities by a vote of the electors, to issue debentures for insurance purposes.

Opposition to any conscription law being enforced in Canada without referendum vote.

In favour of it being indicated on cigar boxes whether the contents were hand, mould or machine made.

In favour of the manufacturers' cost being stamped on all commodities.

In favour of the establishment of a commission to inquire into and give the actual capitalization of the different industries of the country.

In favour of proper protection for earmen when working during inclement weather.

In favour of having track sections for maintenance-of-way employees shortened, the sections not to exceed four miles.

In favour of making it illegal for any person or persons to publish or distribute any printed, mimeographed or written matter not bearing a sign manual indicating the source where such matter originated.

The question of the seniority rights of employees of railways coming under control of the Government roads was referred to the executive council to take up with the Federal Government.

FRATERNAL MESSAGES.

At Thursday morning's session (August 25), the addresses of the fraternal delegates were delivered. Mr. John O'Hara, of Danbury, Conn., fraternal delegate from the American Federation of Labour, spoke of the cordial relations existing between the organized workers in the United States and Canada, and stated that no effort had ever been made by the officers of the international organizations in the United States to interfere with the internal affairs of Canadian unions. Commenting on the 'open shop' fight in the United States, Mr. O'Hara said the public press of that country was hostile towards organized labour, and that the press, together with the chambers of commerce and the manufacturers' associations were endeavoring to break the ranks of organized labour.

Mr. Neil MacLean, M. P., of Govan, Scotland, fraternal delegate from the British Trades Union Congress, in presenting fraternal greetings said that he found Canada had the unemployment problem the same as in Great Britain. He was amazed when he beheld the dimensions of the Dominion and the small population that it had, to find closed up in the cities more than one-third of the people of the country. In the Old Country the people were told that the reason for not going on the land was be-

cause they could not make a living off it. In the central and southern portions of Canada there should be sufficient land and opportunity for every man and woman who was eligible for admittance to Canada to make a living. Mr. MacLean further stated that he found the same conditions existing in Canada as in the old country. The land was held in the control of big interests, and combines control the necessary machinery of production. The claim in Great Britain was that wages must be reduced in order to bring down the cost of living. The result has been strikes and disputes. The speaker informed the delegates that figures collected showed in the case of 334 companies of all kinds in Great Britain the profits had been 30,000,000 pounds more in 1919 than during the profiteering periods of the war. Referring to the miners' strike, Mr. MacLean declared it was an unfortunate one, the result of which had so depleted the treasuries of all the other unions by the payment of unemployed benefits that they had been forced to accept reductions in wages. Referring to the Anglo-Japanese alliance, he stated that the workers on this side were more affected than those in England. To any renewal of this alliance the Labour Party of Great Britain was opposed unless the consent of the British dominions was secured, and for this reason he was desirous of securing the point of view of the Canadian workers as to a continuance of the treaty. Among other matters referred to was the co-operative movement in Great Britain, and Mr. MacLean urged the establishment of co-operative trading companies in Canada as being a strong factor in the development of the labour movement.

A telegram was received from the executive council of the American Federation of Labour, signed by the president, Mr. Samuel Gompers, conveying the fraternal greetings of that body.

Mr. Timothy Healey, president of the International Union of Stationary Firemen and Oilers, addressed the conven-

tion on Friday morning, 'making an appeal for assistance in organizing his craft in Canada, more especially in the railway shops.

Towards the close of the convention presentations were made to the fraternal delegates and local entertainment committee. Mr. Neil MacLean was given a gold watch and Mr. John O'Hara a diamond stick pin. To Mrs. O'Hara, wife of the fraternal delegate from the American Federation of Labour, was presented a diamond ring. Mrs. W. McCormick, of the local ladies' entertainment committee, received a gold brooch, and each of the six members of the general entertainment committee was given a pair of gold cuff links.

On behalf of Tom Mooney

At the session of Thursday afternoon Mr. John B. Mooney addressed the convention on behalf of his brother, Tom Mooney, who was convicted of participation in the bomb outrage which occurred at the time of the preparedness parade in San Francisco on July 22, 1916, and who is now serving a life sentence. The speaker told of the efforts being made to secure the relief of Tom Mooney, who it is alleged was convicted on perjured evidence. He related the latest developments in the case and solicited the delegates to subscribe for Tom Mooney's paper with the object of raising funds to assist in the publicity campaign now being carried on in an endeavour to secure the release of his brother.

OFFICERS OF THE CONGRESS.

The election resulted in the return to office of the members of the executive council by acclamation. The full list of officers and fraternal delegates for 1921-22 is as follows:—

President — Tom Moore, member, United Brotherhood of Carpenters and Joiners, Ottawa, Ont.

Vice-Presidents — Arthur Martel, member of Executive Board, United Brotherhood of Carpenters and Joiners, Montreal, Que.; H. J. Halford, 4th vice-president, Journeymen Barbers' International Union, Hamilton, Ont.; Alexander McAndrew, member of the United Brotherhood of Maintenance-of-Way Employees and Railway Shop Labourers, Moose Jaw, Sask.

Secretary-Treasurer — P. M. Draper, member, International Typographical Union, Ottawa, Ont.

Provincial Executives — *Quebec*: chairman, Gus. Francq, Montreal; committee, A. Beaulieu, Montreal; Omer Fleury, Quebec; and A. Hebert, Hull; *Ontario*: chairman, Joseph Gibbons, Toronto; committee, R. Hessel, London; A. Donald Dear, Ottawa; A. E. Whytall, Sault Ste. Marie. *Manitoba*: chairman, Chas. Dickie, Winnipeg; committee, D. S. Logan, Winnipeg; J. H. Palmer, M. L. A., Dauphin; A. J. Williams, Brandon. *Saskatchewan*: chairman, James Somerville, Moose Jaw; committee, H. Perry and G. H. Merlin, Regina; Gerald Dealtry, Saskatoon. *British Columbia*: chairman, F. W. Welsh, Vancouver; committee, M. Davidson, New Westminster; Wm. Trotter, Penticton; J. Wright, Smithers.

The provinces of New Brunswick and Alberta having organized provincial federations of labour which are chartered by the Congress, no executive committees are elected for these provinces.

Fraternal delegate to the American Federation of Labour:—John W. Bruce, Toronto, Ont.

Fraternal delegate to the British Trades Union Congress:—Ernest A. Robinson, Winnipeg, Man.

Montreal was chosen as the convention city for 1922.

ANNUAL MEETING OF CANADIAN TEACHERS' FEDERATION

THE first annual convention of the Canadian Teachers' Federation was held at Toronto on August 6-9. The Federation was organized in Calgary in 1920, with the primary object of securing adequate recognition of the high status of the profession, with suitable remuneration for teachers. Delegates were present from every Province in Canada, each province being entitled to three representatives. Mr. H. Charlesworth, of British Columbia, **presided**. Addresses of welcome were delivered by Mr. John McClelland, chairman of the Toronto Board of Education, and Mrs. W. E. Groves, chairwoman of the management committee of the same Board. Mr. McClelland congratulated the teachers on the formation of a national organization. Teachers, he said, should have more than a living wage, and their remuneration for directing education should be similar to that of other successful directors of business organizations.

The following resolution submitted by the Alberta Teachers' Federation, was approved by the convention:

"Resolved that the executive of the Canadian Teachers' Federation be requested to take such steps as may be necessary to secure greater equality of teachers' qualifications throughout the jurisdiction of all the affiliated organizations comprising the Canadian Teachers' Federation."

Dean Sinclair Laird, of Quebec, stated that a pension scheme for teachers, with a maximum pension of \$1,800 had been established in that province. Miss Helen S. Arbuthnot, of Ontario, secretary-treasurer of the Federation, stated that salaries of teachers in Ontario were as follows: Public school male teachers, \$1,348; lady teachers, \$817; high school teachers, \$1,820. These figures, she said, fell short of the standard set by the Federation, which for high school teachers was a minimum of at least \$2,000.

Reports were presented on conditions in Alberta, where the teachers recently went on strike, one of their demands being for representation on the local school boards. A British Columbia delegate claimed that all the disputes that had arisen in that province between the teachers and the educational authorities had resulted in victories for the teachers. The convention resolved to create a reserve fund for contingencies by assessing each member of affiliated organizations at one dollar. It was further decided to reimburse the teachers of the western provinces who had suffered financial loss during the recent strikes.

The convention passed resolutions calling for the restriction of "undesirable immigration," and asking the Federal Government to extend grants to the provincial authorities for the education of foreign immigrants.

Mr. T. U. Wells, of Auckland, New Zealand, a visitor to the convention, described the school system of the sister Dominion, in which education is nationally organized, and the teachers are not "at the mercy of the municipal boards."

Mr. Harry Charlesworth was re-elected president for the ensuing year; Mr. H. W. Huntley, of Manitoba, vice-president; and Miss R. H. Anderson, of Vancouver, secretary-treasurer, in succession to Miss Arbuthnot.

The Constitution of the Canadian Teachers' Federation is printed in full below.

Constitution

Article 1. Name.—The name of this organization shall be The Canadian Teachers' Federation.

Article 2. Objects.—The objects of the Canadian Teachers' Federation shall be:—(a) To obtain co-operation and co-ordination of all Provincial Teachers' Organizations upon policies and activities of common interest;

(b) To provide machinery by which the various provincial organizations could be kept in touch with one another and through which mutual assistance could be quickly and readily given;

(c) The Dominion organization shall in no way interfere with the full liberties of the Provincial organizations in dealing with matters concerning their own province.

Article 3. Membership.—Membership shall consist of the following Provincial Organizations of teachers, namely, The British Columbia Teachers' Federation, The Alberta Teachers' Alliance, The Saskatchewan Teachers' Alliance, The Manitoba Teachers' Federation, The Federation of Women Teachers' Associations of Ontario, The Ontario Public School Men Teachers' Federation, The Ontario Secondary School Teachers' Federation; and such other provincial organizations of teachers as may be from time to time admitted.

An organization shall become, or be affiliated with the Canadian Teachers' Federation only so long as its active membership is restricted to those actively engaged in teaching; always provided, however, that every provincial organization shall have the right to admit associate or honorary members.

Article 4. Method of Affiliation.—Any provincial organization of teachers desiring affiliation with the Canadian Teachers' Federation shall apply in writing to the Executive of the Canadian Teachers' Federation and shall accompany such application with a copy of its constitution.

Article 5. Referendum.—The Executive of the Canadian Teachers' Federation may submit questions to the several affiliated organizations and when the unanimous ratification of such recommendation is obtained, such recommendation shall be considered as a resolution of the Canadian Teachers' Federation.

Article 6. Origin of Legislation.—(a) The Executive of the Canadian Teachers' Federation shall have power to deal with all matters affecting the interests of the provinces in common.

(b) Such matters must first be forwarded by a resolution from one or more provincial organizations to the Executive of the Canadian Teachers' Federation, which shall in turn submit said resolution to each and every affiliated provincial federation or alliance.

(c) Every affiliated organization, or all, shall upon receipt of same, instruct their delegates how to deal with such resolution at the next meeting of the Executive of the Canadian Teachers' Federation.

(d) In order that action may be taken by the Canadian Teachers' Federation, there must be a unanimous vote of the Executive of the Canadian Teachers' Federation.

Article 7. Vote.—(a) In all matters of policy and legislation, the method of voting shall be as in Article 6, section "d".

(b) In all other matters, the majority vote shall prevail.

(c) In case of doubt as to which method of voting shall be adopted, the decision shall be made by a unanimous vote of the Executive.

Article 8. Representation.—The Executive of the Canadian Teachers' Federation shall consist of not more than three delegates from each Province, but the delegates from each province shall cast one vote only.

Article 9. Officers.—The officers of the Canadian Teachers' Federation shall be, President, Vice-President and Secretary-Treasurer.

A chartered accountant shall be appointed by the annual convention to act as auditor of the Treasurer's books.

Article 10. Election of Officers.—The officers of the Canadian Teachers' Federation shall be elected by ballot at the Annual Conference, nominations being made in open meeting.

Article 11. Duties of Officers.—(a) The President shall be the Presiding Officer of the Federation, and shall, ex officio, be the Chairman of the Executive Committee, and shall also be a member, ex officio, of all committees appointed by the Executive. He shall have general supervision of all matters and affairs of the Federation.

In the absence or disability of the President, his duties shall be performed by the Vice-President.

(b) The Secretary-Treasurer shall have charge of the seal and of all the archives of the Canadian Teachers' Federation, shall prepare and preserve a record of all meetings, general or otherwise, of the Federation and its Executive, and shall sign and execute all instruments in the name of the Federation when authorized to do so by the Executive, affixing thereto the seal of the Federation in the presence of the President or Vice President. He shall be the legal custodian of all the property of the Federation. He shall submit to the Executive Committee at least fifteen days before the Annual General Meeting, a written report of the business of the Federation for the preceding year.

He shall have the care and custody of all the moneys of the Federation, whether as membership fees or otherwise; shall deposit same in such bank as shall be designated by the Executive and shall disburse and dispose of same at the order of Executive.

He shall keep a proper set of books of account of the Federation, and shall exhibit the same to the Executive Committee when required. He shall submit a special report of the accounts and financial condition of the Federation and of all moneys received and expended by him at each Annual Meeting of the Federation. He shall be required by the Executive Committee to execute a bond for the faithful discharge of his duties in the sum as the Executive may require, the premiums of such bonds to be paid from the funds of the Federation.

(c) The Executive shall exercise all the powers of the Federation, the direction and supervision of its business, and the conduct of the affairs of the Canadian Teachers' Federation. It may appoint committees to carry on the activities of the Canadian Teachers' Federation, but the powers and duties of the such committee or committees shall be defined or approved by the Executive.

(d) In case of vacancies on the Executive, such vacancy shall be filled by the Executive until the next Annual Meeting.

Article 12. Quorum.—The representatives from a majority of the provincial organizations shall constitute a quorum.

Article 13. Meetings.—The Annual Meeting of the Canadian Teachers' Federation shall be held during the summer vacation of each year as the Executive may order, and due notice shall be given each organization on or before May 15th.

Article 14. Business.—The business of the Annual Meeting shall be:—

1. Receipt of Reports.
2. Receipt of Financial Statements.

3. Nomination and election of officers.
4. Appointment of Auditor.
5. General Business.

Article 15. Rules.—Bourinot's Rules of Parliamentary Procedure shall govern all meetings.

Article 16. Amendments.—The Constitution and By-Laws of the Canadian Teachers' Federation shall only be altered, amended, or added to by a unanimous resolution of the Federation submitted to the Annual Meeting. Notice of such amendment or amendments shall be given on or before May 1st, to the various provincial secretaries.

Article 1. Fees.—The annual fee to be paid to the Canadian Teachers' Federation by the Provincial Organizations shall be fixed by the Annual Convention.

TWENTIETH ANNUAL CONVENTION OF THE INTERNATIONAL STEREOTYPERS' AND ELECTROTYPERS' UNION OF NORTH AMERICA

SIXTY-EIGHT delegates, representing a membership of 6,109, attended the twentieth annual convention of the International Stereotypers' and Electrotypers' Union of North America held at Toronto, Ontario, on July 18-23. Seven of the 11 local unions in Canada were represented.

President Freel, in his report to the convention, presented a list which showed that 65 per cent of the electrotypers have obtained the 44-hour week. He stated that the action of a number of printing trade employers who repudiated the agreement made in April, 1919, to establish internationally in the printing industry the 44-hour week on May 1, 1921, had since April 4, last, been responsible for strikes and lockouts which had occurred in a number of localities.

Secretary-treasurer, Mr. Charles A. Sumner, 3110 Olive Street, Kansas City, Mo., reported that during the year ended April 30, 1921, there had been a slight increase in membership. There were 65 deaths during the year and the total funeral benefits paid amounted to \$6,400. The total receipts for the year credited to the general fund was \$43,056; the total expenditure amounted to \$50,638 of which \$7,297 was for strike and lockout benefits; the balance in the general fund was \$13,697,

as against \$21,279 in 1920, a loss of \$7,582. There was \$43,726 in the pension fund at the close of the fiscal year, which amount, the secretary-treasurer stated, had since been transferred to the general fund to pay strike benefits, something over \$2,000 per week being used since April 4, for that purpose. "Even without strikes and lockouts", he said, "our revenues have not been sufficient to safeguard the interests of the organization. The strikes and lockouts forced upon us and which we are unable to avoid cannot be financed after the pension fund is spent."

A number of resolutions on various matters were submitted to the convention. A resolution to provide a fund to take care of tubercular members was withdrawn indefinitely as it was thought inadvisable to take action on the matter at the present time. Two resolutions with regard to death benefits were deferred until the next convention. A resolution to amend the constitution in such a way as to provide for a Second Vice-President, who shall be a member of a Canadian local, was approved by the Committee on Laws, but was defeated by the convention by a vote of 20-24. A resolution to place the age for journeymen within the jurisdiction of the Union at twenty-one years was also defeated. A resolution to amend

the constitution by striking out the entire article entitled "Pensions" under the head of "Defence Fund, Strikes and Lockouts" was adopted by the convention, as was also a resolution to amend Article XII, Section 8 of the constitution with regard to members enlisted or called to the government military or naval service. With respect to a resolution regarding the 44-hour week, the convention decided to refer this to a referendum vote. This resolution called for an assessment of 2 per cent to be levied on the weekly earnings of 1 members beginning September 5, 1921, to be used to support and finance the lockout of members involved in the 44-hour week campaign, this assessment to be continued until such time as the expenditure for defensive purposes shall be less than \$200 a week and the

amount in the general fund shall be \$10,000 after the payment of all indebtedness.

It was recommended by the Union Label Committee appointed to deal with the complaint from Canadian local unions relative to the character of the label design, that the maple leaf should be incorporated with the present design of the eagle and that the new design should be submitted to a referendum. They also recommended that the local unions affiliate themselves to Union Label Leagues or councils in cities where such bodies exist and make every effort to organize such bodies where they do not exist.

It was decided to hold the 1922 convention at Cincinnati, Ohio, and the 1923 convention at Omaha, Nebraska.

FURTHER ACTION TOWARDS THE ALLEVIATION OF UNEMPLOYMENT

THE present article relating to action taken by federal and provincial authorities toward the alleviation of unemployment is a continuation of an article on the same subject which appeared in the August issue of the LABOUR GAZETTE.

With a view to securing more definite information as to the situation with regard to unemployment, the Minister of Labour on August 31, addressed the following letter to the mayors of about 70 municipalities in the Dominion:

You are doubtless deeply concerned in the unemployment situation with which we will probably be confronted this coming winter. I assume you are fully aware of the Federal Government's policy, put into effect last December, to aid the municipalities in bearing the cost of necessary relief disbursed for this purpose. While that policy has materially aided municipalities and contributed substantially to relieving suffering among the unemployed, it is by no means regarded as an entirely satisfactory method of meeting the situation.

A conference between the Federal and Provincial Governments may be held in the near

future, in which case I am anxious to obtain all the suggestions and information possible from the Chief Magistrates of our industrial centres, to the end that the whole Canadian situation may be summarized and that we may be able to judge, as accurately as possible, the probable requirements.

Will you be good enough to write me fully your views — so far as your municipality is concerned — as to the present situation, what you anticipate will be the conditions during the coming winter, in what particular industries unemployment exists, the approximate number of men and women you think will find themselves unemployed, and whether there is likely to be an increase or decrease as compared with the present situation. I would particularly like to have any suggestions you have in mind as to what action might be taken that would best tend to relieve the situation in your City, in which the Federal Government could consistently participate.

The question of unemployment was brought before the New Brunswick Union of Municipalities which met in convention at St. John on August 24. The subject was introduced in an address by the Honourable W. E. Foster,

premier of the province, who is quoted in part as follows:—

Fortunately in this province the same unemployment difficulties that prevail in larger cities and manufacturing centres in Canada are not met with, but in certain localities it is feared that the unemployment situation may become acute and render it necessary for steps to be taken to meet the conditions. With this end in view and with the object of ascertaining if such conditions are likely to exist I have had drafted and sent to the warden and the secretary of each county a letter asking that a general survey be taken of the conditions prevailing, or likely to prevail during the coming winter, and asking for such other information as would in the event of aid or assistance being required, make it possible for it to be taken in a practical way in ample time. This is a matter which I think should be discussed by this body and with the suggestion of the best means that might be taken to meet any emergency that might arise, I would suggest the appointment of a committee from your body to confer with the Government.

The following day a general discussion took place on this subject from which it appeared that in some parts of the province there was little or no unemployment, while in others conditions were severe owing to the depression in the lumbering industry. The premier suggested that local municipal councils appoint unemployment committees and that a provincial committee might be formed composed of members of the legislature, representatives of the Trades and Labour Council, the G.W.V.A., the Union of New Brunswick Municipalities, and others.

An advisory committee of unemployment was appointed by the Ontario government, the members being nominated by the principal industrial and commercial organizations and others. The personnel of the committee and interests represented are as follows: Agriculture, W. C. Good, Paris; finance, D. A. Cameron, president of the Bankers' Association; returned soldiers, Col. Dougal Carmichael; labour, John Doggett, business agent of the Building Trades Council; mercantile, Charles E. Mar-

riott, Toronto Board of Trade; Toronto Builders' Exchange, George Gander; Retail Merchants' Association, R. F. Fitzpatrick, president Retail Clothiers' Association; manufacturers, J. E. Walsh, general manager, Canadian Manufacturers' Association. The chief functions of the committee are to gather information from the various interests represented and to make recommendations to the government. The first conference with the Ontario cabinet took place on August 17, when organization was effected and a general programme of work was outlined.

A preliminary conference on unemployment was held in the office of the Attorney General of Manitoba on August 8. There were present the provincial ministers of agriculture and public works, the deputy minister of agriculture and representatives of the Dominion and provincial employment services. It was decided to call a general conference for September 15, to which would be invited representatives from each city in the province and the municipalities around Winnipeg, from organizations of employers and employees, from the United Farmers of Manitoba and from the Union of Municipalities.

Steps were taken by the Saskatchewan Bureau of Labour to secure information from employers regarding prospects in each line of industry for the coming winter. A record was also being kept of men who refused to work at fair wages during the summer.

In accordance with a recommendation adopted at the unemployment conference which was held at Edmonton, Alberta, on July 20, a further meeting of the conference took place on August 23. At this meeting the following resolutions were adopted:—

1. That the provincial government, federal government and municipalities jointly undertake to provide as much work as possible.

2. That the mayors of the six cities of the province investigate the housing scheme of the federal government with a view to making suggestions as to how it can be better applied in the cities.

3. That the provincial government investigate the practicability of advancing loans to farmers on a similar basis to that of the cow bill, for the purpose of clearing land.

4. That no married woman be employed where the husband already has a position sufficient to support the family.

5. That an industrial survey be made in the province with a view to encouraging the development of industry.

6. That the U. F. A. circularize its locals, suggesting that farmers employ as much help as possible during the coming winter.

7. That either the Dominion government or the provincial government call a conference of employers of labour, with a view to discussing their responsibility regarding unemployment.

8. That the Dominion government be asked to postpone the date of payment on soldiers' farms from October 1 to December 31, in order to give them a chance to market their crops before payments become due.

9. That we ask the Dominion government to call a national conference to discuss the question of unemployment at as early a date as possible.

10. That we recommend to this national conference that preference be given to those who have registered for employment.

Arrangements were also made for an organization for distribution of relief, as follows:

(1) That civic relief committees be formed in cities to consist of representatives from Board of Public Welfare, Red Cross, Great War Veterans' Association, Department of Soldiers' Civil Re-establishment, and Patriotic Fund. (2) That local representative committees be formed. (3) That a central distributing and registration agency be established in order to prevent overlapping in the distribution of relief.

A conference on unemployment called by the Attorney-General and Minister of Labour of British Columbia took place at Vancouver on August 10. The persons invited included fifty large employers of labour, financial men, and mayors and reeves of the chief municipalities on the southern part of the coast. In addressing the conference the minister stated that between eleven and twelve thousand were unemployed in British Columbia during July, and surveys made by the provincial Department of Labour indicated that the number might increase to 20,000 in the winter. On August 16, another conference was held composed of representatives of labour, returned soldiers and municipalities.

INTERNATIONAL EMIGRATION COMMISSION

Resolutions adopted at first session held at Geneva, August 2-11, 1921

THE International Emigration Commission, which it will be recalled was appointed in 1920 by the Governing Body of the International Labour Office in accordance with a resolution adopted at the International Labour Conference at Washington, held its first session at Geneva during August 2-11 last. Fifteen nations were represented on the Commission.

A number of resolutions were adopted, the most important of which recommended the institution of a thorough examination of emigrants at the port of embarkation. Among other resolutions adopted were (1) supervision over all kinds of agents interested in promoting emigration and the abolition of all emigration propaganda based on false information; (2) supervision and control,

by competent authorities, of the recruiting of workmen in foreign countries, confining such recruiting to agencies authorized by the State; (3) safeguarding the state of the labour market of countries of emigration and immigration; (4) contracts containing clauses for the deduction of travelling expenses from the wages of the immigrant, shall be declared null and void by competent authorities of countries of emigration, where such clauses are not in accord with existing legislation.

The Commission (acting on a resolution adopted at the International Conference on Traffic in Women and Children, which conference was held at Geneva from June 30 to July 5, 1921) decided to propose the insertion of the question of protection of emigrant women and children in the agenda of the International Labour Conference of 1922.

It also declared itself in favour of studying the question of supervision of hygiene on board ship.

The members present were: Viscount Ullswater (Great Britain) Chairman; Mr. Giuseppe de Michelis (Italy), Vice-Chairman; *Government Representatives*: Mr. Raoul Regis de Oliveira (Brazil), Colonel Obed Smith (Canada), Mr. Li Tehuin (China), Mr. W. Onalid (France), Sir Ernest Low (India), Mr. N. Nagai (Japan). *Employers' Representatives*: Mr. W. Gemmill (South Africa), Count de Montornes (Spain), Mr. Clithines Philaretos (Greece), Dr. Vaclay Verunac (Czecho-Slovakia), Mr. De J. Gaganut (Switzerland). *Workers' Representatives*: Mr. A. Knoll (Germany), Mr. Lino Burlini (Italy), Mr. Karl Viktor Holmstrom (Sweden). The Workers' representative for Poland was absent.

MINIMUM WAGES FOR WOMEN IN ONTARIO

THE first Order of the Ontario Minimum Wage Board governing laundries, dye-works and dry-cleaning establishments in the city of Toronto which is given in the accompanying table as (1) (a), and which was reviewed in the April issue of the LABOUR GAZETTE has been followed recently by four more. Orders Nos. 2 and 3 which went into force on August 1, 1921, also apply to the city of Toronto only, the former dealing with certain classes of factories and the latter with retail stores. Orders Nos. 4 and 5 which for convenience are given in the table as (1) (b) and (1) (c) became effective on September 1, 1921, and govern the same class of establishments

as Order No. 1 in territory not formerly covered.

All the orders direct each establishment to keep a copy of the regulations contained therein posted in a conspicuous place and request employees who are being paid less than minimum wage to report to the Minimum Wage Board. Violations of the orders are punishable by fine or imprisonment as provided by Section 22 of the Minimum Wage Act, which authorizes a fine of not more than \$500 and not less than \$50, and, in default of payment, a term of imprisonment ranging from 2 to 6 months.

The following table summarizes all the Orders issued for the Province up to date:

TABLE OF MINIMUM WAGES FOR FEMALE EMPLOYEES IN ONTARIO.

Industry.	Minimum Weekly Wage.							Maximum number of learners allowed.		Remarks.
	Skilled Adults	Adult Learners.		Minors.				Adults.	Minors.	
		First Period.	Second Period.	First Period.	Second Period.	Third Period.	Fourth Period.			
(1) Laundries, dye-works and dry-cleaning establishments (a) City of Toronto.	\$12	\$10 First 3 mos.	\$11 Second 3 mos.	\$9 First 6 mos.	\$10 Second 6 mos.	\$11* Third 6 mos.	25%	25%	Maximum charged for lodging, \$2.00 per week, for board \$5 per week, and for single meals 25c. per meal.
(b) Cities of over 50,000 population, except Toronto.	\$12	\$10 First 3 mos.	\$11 Second 3 mos.	\$7 First 6 mos.	\$8.50 Second 6 mos.	\$10* Third 6 mos.	25%	25%	Maximum charged for lodging, \$2.00 per week, for board \$5 per week, and for single meals 25c. per meal.
(c) Province of Ontario, except in cities of over 50,000 population.	\$11	\$9 First 3 mos.	\$10 Second 3 mos.	\$7 First 6 mos.	\$8.50 Second 6 mos.	\$10* Third 6 mos.		25%	25%	Part-time less than 40 hours per week to be paid on an hourly basis at rates not less than 1-48 of the established wage rate. Maximum charged for lodging \$1.50 per week, for board \$4.50 per week and for single meals, 25c. per meal.
(2) Confectionery, biscuits, chocolate, jam, gum, grocery, specialties, crushed fruit, syrup, pickles and all allied industries; paper box, corrugated paper box, paper bag, manufacturing stationery, envelope, tag and cheque book and allied industries in the City of Toronto.	\$12.50	\$10 First 6 mos.	\$11 Second 6 mos.	\$8 First 6 mos.	\$9 Second 6 mos.	\$10† Third 6 mos.	1-3	1-3	Piece-work to be paid at the same rate. Part-time less than 36 hours per week to be paid in proportion reckoned on an hourly basis. Deductions for absence below minimum wage line not to exceed value of time lost reckoned on normal working hours
(3) Retail stores in the City of Toronto.	\$12.50	\$10 First 6 mos.	\$11 Second 6 mos.	(Girl commencing at 16 years) \$8 First 6 mos.	\$9 Second 6 mos.	\$10 Third 6 mos.	\$11 Fourth 6 mos.	25%	25%	Part-time less than 36 hours per week to be paid at same rate reckoned on an hourly basis.
(This order governs the selling force and includes cashiers, parcelers, messengers and other employees, working with the saleswomen and not on the office or operative staffs).				(Girl commencing at 16½ years) \$8.50 First 6 mos.	\$9.50 Second 6 mos.	\$10.50 Third 6 mos.	\$11 Fourth 6 mos.	Where total female working force exceeds four.		An employee reaching the age of 18 years without experience in selling goods may be paid \$11 per week, during her first 6 months as a saleswoman.
				(Girl commencing at 17 years) \$9 First 6 mos.	\$10 Second 6 mos.	\$11 Third 6 mos.				
				(Girl commencing at 17½ years) \$9.50 First 1st 6 mos	\$10.00 Second 2nd 6 mos					
				A girl 14 or 15 years of age at the time of commencing in the industry is to receive \$7 per week until she reaches the age of 16 years when she is considered as commencing work.						

*A girl who has been employed in the industry for a year or more before reaching the age of 18 years is considered an experienced adult employee upon reaching that age.

†A girl who has been working less than a year in the industry upon reaching the age of 18 years becomes an experienced adult employee upon completing a year of work in the industry. In no case may any employee of 18 years or over be paid less than the rate fixed for inexperienced adults.

LABOUR AND WAGES STATISTICS OF VARIOUS INDUSTRIES
IN CANADA

Reports of the Dominion Bureau of Statistics on (a) the clothing industry (women's wear); (b) the furniture and upholstery industry; (c) repair work

CONTINUING the series of statistical reports on various manufacturing industries in Canada, of which previous issues have been outlined in various issues of the LABOUR GAZETTE, the Dominion Bureau of Statistics recently published reports on the industries mentioned above.

Clothing Industry (women's wear) in 1919

As in the report on the men's clothing section of the industry,* this report is presented under two heads, first, whole-sale or factory-made clothing, and second, custom-made clothing, which includes millinery and dress and mantle-making. The principal statistics of the industry by provinces are shown in the following table:—

FACTORY-MADE CLOTHING.				
Province.	Plants.	Capital.	Employees	
			No.	Salaries and Wages.
Alberta and British Columbia.....	10	\$189,596	162	\$139,684
Manitoba.....	5	129,383	94	76,432
New Brunswick.....	4	128,213	72	41,340
Ontario.....	106	15,337,903	7,872	7,925,504
Quebec.....	106	7,538,576	4,145	3,694,335
Totals.....	231	23,343,671	12,345	11,877,795

CUSTOM-MADE CLOTHING				
Alberta.....	57	\$188,236	98	\$65,830
British Columbia.....	74	229,612	202	152,733
Manitoba.....	62	209,674	202	156,801
New Brunswick.....	56	535,763	536	376,039
Nova Scotia.....	77	366,423	220	123,673
Ontario.....	659	2,474,858	2,048	1,498,563
Prince Edward Island..	3	1,200	4	1,300
Quebec.....	507	2,311,910	1,760	1,127,834
Saskatchewan.....	50	98,069	79	42,394
Totals.....	1,545	6,415,745	5,149	3,544,967

The number of persons employed in each section of the industry is given by classes of employment and sex, with wages, etc., as follows:—

Classes of Employment.	Factory-made clothing.			Custom-made clothing.		
	No. of employees.		Salaries and wages.	No. of employees.		Salaries and wages.
	Male.	Female.		Male.	Female.	
Officers, superintendents, managers.....	397	67	\$1,419,000	144	126	\$492,087
Clerks, stenographers, etc.....	519	471	1,301,346	92	202	239,638
Wage earners, average number.....	2,207	8,444	9,062,555	547	3,967	2,791,223
Outside piece workers.....	4	236	94,894	10	61	22,019
Totals.....	3,127	9,218	11,877,795	793	4,356	3,544,967

*see Labour Gazette, May, 1921, page 684

Classified according to specified wage groups, by age and sex, the numbers of employees are shown as follows:—

Specified wage group.	Factory-made Clothing.				Custom-made Clothing.			
	Over 16 years.		Under 16 years.		Over 16 years.		Under 16 years.	
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
Under \$5 per week.....	10	168	2	11	10	181	37	47
\$ 5 to under \$10 per week.....	88	1,458	21	45	47	1,403	20	73
\$10 to under \$15 per week.....	180	3,008	4	9	72	1,572	8	25
\$15 to under \$20 per week.....	240	1,841	6	88	766	7
\$20 to under \$24 per week.....	194	518	3	88	210	2	1
\$24 to under \$28 per week.....	244	309	1	57	116	1
\$28 to under \$30 per week.....	140	74	16	9
\$30 per week and over.....	1,084	158	203	65
Totals.....	2,180	7,534	27	75	581	4,322	68	153

In factory-made clothing the cost of materials used during the year was \$24,358,795, and the value of the products was \$44,381,417; in custom clothing materials cost \$7,206,605, and the products were valued at \$15,279,448.

Furniture and Upholstering Industry in 1919

This report covers the operations of 270 individual plants of which 180 were situated in Ontario, 49 in Quebec, 13 in British Columbia, 11 in Nova Scotia, 7 in Manitoba, 4 in New Brunswick and Prince Edward Island, and 3 each in Alberta and Saskatchewan. The total amount of capital invested in these plants was \$24,400,099, of which amount \$21,030,165 was invested in plants in Ontario, and \$2,808,919 was invested in Quebec. The persons engaged in the industry are classified in the following table by employment and sex, with the amount of salaries or wages paid in each class:—

Class of employment.	No. of employees.		Salaries and wages.
	Male.	Female.	
Officers, superintendents and managers.....	329	10	\$824,111
Clerks, stenographers, etc.....	344	259	623,183
Wage earners, average number.....	7,620	490	6,418,753
Outside piece workers.....	19	9	7,111
Totals.....	8,312	768	7,873,158

Classified according to weekly wage payments within specified groups the numbers employed were as follows:—

Specified groups of weekly wages.	Over 16 years.		Under 16 years.	
	Male.	Female.	Male.	Female.
Under \$5 per week.....	24	5	27
\$ 5 and under \$10 per week.....	405	166	212	25
\$10 and under \$15 per week.....	1,422	245	35	4
\$15 and under \$20 per week.....	2,797	47
\$20 and under \$24 per week.....	1,688	4
\$24 and under \$28 per week.....	1,149	1
\$28 and under \$30 per week.....	318
\$30 per week and over.....	549	1
Totals.....	8,362	469	274	29

The cost value of materials used during the year at the factory was \$9,666,-073; fuel cost \$381,440, and miscellaneous expenses amounted to \$2,823,-171. The selling value at the factory of products during the year was \$25,-166,305.

Repair Work

The report on repair work in Canada, in 1919 covers plants engaged only on repairs, and excludes those which also produce new goods. Such shops, it is stated, are an important factor in the productive industry of the country, "the repairing process being essentially indistinguishable from production in that it permits the extended use of articles which would otherwise pass out of economic service." The principal repair

shops referred to are those for automobiles, bicycles, boots and shoes, elevators and jewelry. The number of wage earners (not including salaried workers) in these plants, with amounts of wages paid, by classes of work, is shown in the following table:—

	Number of repair shops.	Wage earners Average number.	Amount of wages.
Automobiles.....	1,239	3,629	3,728,414
Bicycles.....	136	205	174,181
Boots and shoes.....	1,125	1,470	1,249,397
Elevators.....	14*	252	306,420
Jewelry.....		3,463	3,319,761

* Most repair work is done in the elevators themselves.

ACCIDENT PREVENTION WORK OF THE DOMINION COAL COMPANY

THE safety organization of the Dominion Coal Company at Cape Breton, N.S., is described by Mr. W. L. Fraser, field officer of the Nova Scotia Accident Prevention Association, in a recent issue of the *Canadian Mining Journal*. Twelve safety committees are in charge of the work of accident prevention. Of these committees eight belong to the Company's various mines; two take care of the two shipping piers, one of the mechanical, electrical and railway departments, while the twelfth is the general executive committee. All committees meet regularly once in every two weeks. The general executive committee is composed of 21 of the company's officials, the assistant general manager being chairman, and the superintendent of industrial relations being secretary. At its fortnightly meetings all recommendations from other committees are dealt with as well as other matters relating to safety and first aid. A safety engineer and safety inspector act in conjunction with all committees.

The duties of the eleven district and department committees are: (1) to make a general inspection of the whole plant at least twice a month, and to report on safety and sanitary conditions on forms furnished for that purpose; (2) to make a record of all safety problems arising in their respective departments from day to day and to submit reports for discussion at the regular meeting of the committee; (3) to investigate all accidents and consider methods of preventing a repetition, the result of the investigation to be made in writing to the Safety Department; (4) to warn workmen against unsafe practices, and to report to the foreman any cases where a workman does not heed the warning given; (5) to help to enforce all safety rules and regulations.

Although the safety organization has functioned for only a few months considerable good, it is claimed, has already resulted from its ef-

forts. In four months, \$26,000.00 has been expended in the purchase of safety and first-aid equipment; guards have been placed over dangerous machinery parts, safety railings built where required, safety switches installed on high voltage currents, dangerous practices on the Company's railway stopped, and many other measures taken for safer conditions.

The "Safety First" campaign began with a general clean-up of scrap material and rubbish around the collieries, and the bankheads, yards and machine shops now present a neat appearance, and offer fewer hazards than formerly.

At every bankhead there is a First Aid station in charge of one of the recent First Aid graduates. These stations are equipped with approved ap-

pliances, beds and medicines, and are always kept clean and neat; stations far removed from a regular hospital are also provided with standard hospital operating tables. Numerous stretchers are kept at convenient places on the surface and underground, the latter being protected by galvanized containers from damp and dirt.

Diplomas from the St. John Ambulance Association were recently awarded to 217 employees of the Company who had passed examinations on "First Aid to the Injured." Sixteen classes were carried on during last winter, the total number enrolled being 450. "This," says Mr. Fraser, "is a most commendable performance worthy of being emulated by the other large industrial concerns of the Province."

THE ECONOMIC LABOUR COUNCIL IN FRANCE

THE present article having reference to the formation of a council for the study of economic questions in France is based on an article by Mr. Léon Jouhaux which appeared in a recent issue of the *International Labour Review* published by the International Labour Office, League of Nations.

After an unsuccessful attempt to induce the French Government to constitute a National Economic Council composed of representatives of employers and workers' organizations, technical advisers, government delegates, and persons versed in law and economics, the National Congress of the General Confederation of Labour which met at Lyons in September, 1919, took steps to form an Economic Labour Council. This body, which held its inaugural meeting in Paris on January 8, 1920, under the presidency of Professor Gide, is composed of representatives of the General Confederation of Labour; the Trade Union of Technical Workers in Industry, Commerce and Agriculture; the National Federation of Civil Servants; and the

Federation of Co-operative Societies. The business of the Council is to engage in the study of industrial and economic problems, and at the time of its constitution it was stated that it was to apply itself without delay both to the immediate and to the general problems of production and exchange.

In order to carry on this work, the members of the council are divided into nine sections to each of which one of the following subjects has been assigned:

National equipment, power, transport and communication.

Economic organization (control and management of national and international economy).

Industrial production and raw material.

Agricultural production and agrarian organization.

Finance and banking.

Social life, health, town-planning, recreation, education, social insurance.

General and technical education.

Commerce and the distribution of wealth.

Devastated regions.

Each section is composed of at least three delegates of each of the constituent organizations, and each one has two secretaries. The secretaries together constitute the Committee for the Distribution of Work and they act as a liaison between the Sections and the Managing Committee which is at the head of the organization. The Managing Committee is composed of three representatives of the four bodies which constitute the Economic Labour Council; the secretary of the Committee is the secretary of the General Confederation of Labour. The Managing Committee decides that an inquiry shall be made into a certain question, and general instructions regarding it are sent to the sections through the Committee for the Distribution of Work, each section studying an aspect of the problem within the limits laid down for it. Finally the Committee collects and co-ordinates the work of the sections. Up to the present the Economic Labour Council has made an inquiry into the re-organization of the French railways and has recommended the nationalization of the railways along the lines laid down by the labour congress at Lyons. It was stated

by the congress: "We do not wish to increase the functions of the Government — and above all we do not wish to have recourse to any system which would submit essential industries to bureaucracy with its irresponsibility and its constitutional faults, and would reduce the forces of democracy to a kind of fiscal monopoly. — By nationalization we understand the entrusting of national property to the persons concerned, associated producers and consumers." The Council advocates the return to the community of the great industries or services (in the first place the railways, mines, power-stations, etc.), the main sources of energy and the main means of transport, and the independent working of these industries or services by bodies representing three parties in equal numbers—producers (manual and technical) consumers and users, and the community. The various sections of the Council are also studying questions relating to their special lines such as the agrarian problem, the banking system, housing, education, etc. As a result of these inquiries, the Council at its second session recommended the setting up of a general directorate of national economy in order to overcome the dissipation of the initiative, the prevalence of competition and speculation and the waste of effort and materials under the present economic system.

THE 60-DAY SETTLEMENT PLAN OF WAGE PAYMENT IN STEEL INDUSTRY

Adjustment of Wages to Selling Price of Product

SINCE the publication of an article on typical methods of wage payment in the last issue of the LABOUR GAZETTE, information has come to hand of a method of wage payment which, it is reported, has been in operation to some extent in the steel industry of the United States. The principle of the method, which has become known as the "60-day

settlement plan," is the adjustment of wages to the selling price of the output. The plan was approved by the Amalgamated Association of Iron, Steel and Tin Workers of North America at their annual convention which took place recently at Hamilton, Ont.; where it was stated that the plan received the endorsement also of the Secretary of Labour

in the United States cabinet, the Hon. James J. Davis, who is himself a member of the Association.

The plan provides for a basic wage, and above this minimum or base fixes a scale graduated according to the selling price of the product. For example, in the steel industry the wages are adjusted every sixty days on the basis of the prices received during the previous two months. Thus, the base rate for puddlers is \$5.50 per ton; when steel prices go up, the puddlers' wages go up, and *vice versa*. Last year, it was stated, the wage rate went up to \$18.76, or \$13.26 above the base rate, or 241 per cent above the pre-war rate, this advance resulting from the high price of steel. As prices drop wages are lowered, but they cannot fall below the base rate agreed upon. As an example of the working of this plan, the

report of the Committee of the Association on the 60-Day Settlement Plan, giving the result of their bi-monthly examination of the sale sheets of the Western Sheet and Tin Plate Manufacturers' Association for the 60-day period ending April 30, 1921, stated that the average invoiced selling price of 26, 27 and 28 gauge plain sheet steel, f.o.b. mill, was \$3.95, which gave to the sheet mill workers for the months of May and June a 36-point rise over the base price of \$2.15. This is 54 per cent above base of \$2.15 on prices contained in scale book of 1920-21. The same committee reported that for the same period the average invoiced selling price of a box of 100-pound coke tin plate prime sheets, f.o.b. mill, was \$6.50, or a 60-point rise above the base of \$3.50. This is 67.5 per cent above base prices contained in scale book of 1920-21.

COMPANY STORES IN THE UNITED STATES

Methods of reducing cost of living for employees

NEW types of "company stores," designed to provide food at minimum prices to employees, are described by Mr. John T. Barlett in *Industrial Management* (New York, August 1, 1921). Hitherto these stores, the writer points out, have often developed into institutions which bred ill-will rather than confidence. "Enjoying a virtual monopoly they could charge what they pleased, and often did. They gave credit, and collected out of the employee's pay. Certainly they were anything but a morale-builder." The new type of store, on the other hand, is co-operative in management, and directly aims at cutting the cost of living for employees. Perhaps the best example is the co-operative store of the Ludlow Manufacturing Associates at Ludlow, Mass. This store was organized by the management in June, 1920, in response to a request from the employees at a joint conference held in the previous

month. It is run by the employees, subject to some oversight by a management committee. Commodities are sold at cost price, the company paying for help, lighting, and upkeep, and aiming to get back only the capital invested, without interest. The company furnishes the money as a bill of goods is purchased, and receives the money back when they are sold. The store caters to employees and their dependents only. It is operated on the "cash and carry" principle. The store is conducted by means of a system of committees. The general committee is elected by the workers every three months, and serves without remuneration. This committee consists of 19 representatives, the outside departments, machine shop and office, having one representative each, and each of the four groups of mills having four representatives. It is divided into sub-committees of eight members each, namely, a purchasing committee, an aud-

iting committee and a store committee. The company is represented by a standing advisory committee of five members, who are responsible to the company for the successful management of the store, passing on policy proposals and expenditures involving company funds. The store has served as many as 1000 customers in a day. Sugar sales average 2,500 lbs. a week; egg sales, 1000 dozen a week, and the record of sales in one day is over \$1,200. So-called "co-operative stores" are also run by the American Woollen Company at Lawrence, N. H., and elsewhere.

Another plan under which employers lend the power of their organization towards reducing the cost of living for their workers is a development of the farmers' market. Many attempts on the part of farmers to sell their produce directly to the consumers have failed, owing partly to irregular demand on the side of the consumers, and partly to irregular supply on the part of the farmers. These two defects are remedied, it is claimed, in such enterprises as the Endicott-Johnson Company's city mar-

ket for the benefit of their employees. This market is in charge of a market master employed by the company. To protect the consumers and ensure their custom, this official sets the maximum prices each market day; while to steady the supply of produce he pays a cash bonus daily to every farmer who comes on the market and sells a load of produce. The result of these two devices has been to stimulate the farmers to produce for the local market, and to attract buyers by the plentiful supply of local produce. Commenting on the success of this plan Mr. Bartlett says it is bound to succeed provided the market master is competent. "It involves a cash outlay of regular and substantial amount, but brings returns in better contentment, goodwill, and a high level of morale, that justify it many times over."

Another form of "company food enterprise" is the purchase of produce in ear lots directly from the producers, orders being taken in advance by an employee committee, and the order being given by an agent of the company. Large savings in the cost of certain articles are said to be effected by this plan.

JOINT APPRENTICESHIP COMMITTEE IN PRINTING TRADES IN GREAT BRITAIN

A SYSTEM of joint control of apprentices, dating from January 1 of the present year, is described by Mr. W. Warren, general secretary of the National Society of Electrotypers and Stereotypers of Great Britain, in an article written in connection with the conference of the International Union of these trades which was held in Toronto in July. In all trades covered by the Trade Employers' Federation every apprentice is now bound by his indenture not only to his particular firm, but also to a Joint Apprenticeship Committee composed of three representatives of the Employers' Federation and three union representatives. Every indenture must

be signed by the representatives of the employers' and workers' organizations, as well as by the firm, the apprentice and his guardian. The duty of the Joint Apprenticeship Committee is to see that each boy receives an adequate training in all details of the trade; and further, that during the first two to four years of his term of apprenticeship he attends at least two sessions every week at the Technical Training Institute, such attendance being compulsory and not optional, part of the time of such attendance being in the employer's time and paid for, and part in his own time at an evening session. The Joint Committee

has also power to summon before them any apprentice who does not conform to the terms of his indenture, and to cancel the indenture of a candidate proving unworthy of the craft. Mr. Warren anticipates that the plan will benefit the trade in general, and will also result in higher wages being paid to the apprentices. These wages vary according

to the apprentice's age on commencing his seven-year term and form a percentage of the journeyman's wage. The period of attendance at the technical school also varies according to the age of starting. An effort is being made to extend the plan to all the trades covered by the various employers' associations in the printing industry.

APPRENTICE TRAINING BY MEANS OF SHOP PRACTICE

Development of Apprentice System in a United States Plant

A PLEA for the revival of apprenticeship on the old lines of shop training was made in an address before a recent convention of the National Metal Trades Association by Mr. J. E. Goss, supervisor of apprentices in the plant of the Brown and Sharpe Manufacturing Company, of Providence, Rhode Island. (Systems in practice by other corporations in the United States were described in the last issue of the *LABOUR GAZETTE*). Mr. Goss strongly dissented from the common opinion that "apprenticeship is dead," and claimed that the old apprenticeship system, provided it is modernized like other departments of industry, offers a more thorough training for young learners than modern substitutes such as trade schools and "intensive training," which are concerned only or mainly with "instruction technique."

The four following reasons are suggested by Mr. Goss to explain the decline of belief in apprenticeship which has been evident during the past ten or fifteen years:

(1) The failure of the trade itself to keep pace with the progress of general education which makes boys more independent in their choice of a trade. If shop owners are to attract and retain apprentices they must provide special facilities for training. Proper apprenticeship training often appears to employers

to be too remote from profits, and employers are tempted to rely on technical schools, vestibule training and upgrading, rather than take a direct interest in the progress of their younger employees. "Such technique as public educators are able to supply, are of minor importance to the things which the shop itself must do."

(2) The erroneous notion that learning can be accomplished intensively, or by quick and easy ways. Mr. Goss disagrees with an instructor in a well-known technical school who claimed that a mechanic could be turned out at that institution, out of raw material, in 150 shop hours. He maintains, on the contrary, that experience is the largest part of a sound and thorough craftsmanship. Vestibule schools and upgrading, though necessary for some purposes, must not be misconstrued as substitutes for apprenticeship.

(3) The belief on the part of educators, parents and prospective mechanics that vocational training in the public schools is sufficient to confer craftsmanship. Considerable effort, he thinks, is being dissipated on various advanced shop practices which should be concentrated on a better understanding of fundamentals.

(4) The tendency of the modern boy to avoid the manual work, resulting from the spread of secondary education. It

is wrongly supposed that such education carries a prestige sufficient to start a boy upon the path of leadership with the help only of part-time study, and without actual shop training. Such studies should only supplement actual experience.

To remove the mistaken idea that "apprenticeship is dead" Mr. Goss recommends systematic advertising by owners of the advantages offered in their plants for industrial training. Thus the Brown and Sharpe Company publish books and folders which are distributed in high schools, trade schools, and among persons interested in the future of boys; illustrated "talks" are given at schools and before organizations concerned with vocational education, and other measures are taken to prove the direct and active interest taken at the Company's plant in the advancement of learners. The apprentice department selects districts in which the best class of boys is believed to exist and sets itself to attract them to begin a career as apprentices. Among the advantages offered, a good dormitory is provided to attract boys accustomed to good homes; new boys are taken through the factory and are shown the various lines by which they may advance to responsible positions; they see with what care records are kept, and are given to understand that their advancement will follow consistently upon their own efforts and does not depend upon the whim of an individual instructor. Every boy comes on a three months' trial, after careful selection, trial tests being made by foremen experienced in judging beginners. About one-fourth of the boys thus selected are rejected at the end of the trial term, a careful report on a printed form being made by the foreman, shop instructor, class instructor, timekeeper, works superintendent and supervisor of apprentices. Good reason is thus proved and very few boys have been found to disagree as to their unfitness to continue the course.

Mr. Goss has little faith in the plan of segregating the apprentices, and all the learners' time with this firm is spent

in the production departments under instructors who are not only competent in their trade but are men of proven tact, patience and ability in handling of men as well as boys. A regular schedule of operations is followed by every boy. "From the lather to the drilling machines and the milling machines, and so on throughout the course each machinist's apprentice is routed by the Apprentice Department. From helping to floor work, to bench work and so on throughout his course each moulder's apprentice is likewise routed. With the boy there goes to the foreman a job analysis card, to be checked off as the steps of the work are taught, and to be returned to the Apprentice Department when the boy leaves, for comparison with a duplicate card checked by a shop instructor. With this is returned a printed form bearing the foreman's estimate of the boy's industry, deportment, workmanship and mechanical judgment, marks which are transferred to the boy's history card for a permanent record."

The first and most important step in organizing apprenticeship work, in Mr. Goss's opinion, is the complete centralizing of authority and responsibility for results. The Brown and Sharpe plant, for example, is one of the few places in which the foreman is subordinated to the Apprentice Department in the matter of apprentice training. This rule is made because a foreman is primarily commissioned with the work of production, and he is therefore tempted to regard boys under his charge as aids in production, or else consider special instruction as apart from his main duties. In practice some difficulty may be found in curtailing the foreman's authority, but a similar curtailment has already been effected in taking out of the foreman's hands the power of employing new workers, and the new change he believes, can also be effected by careful management.

Shop schools which many managements look upon as fulfilling their entire obligation to apprentices fail,

according to Mr. Goss, to produce good results because they are generally divorced from actual shop practice. In the Brown and Sharpe plant only shop mathematics and drawing are included in the regular program, but every provision is made to enable boys to study subjects arising out of their actual jobs from day to day. Moreover a general library is maintained to encourage apprentices in the habit of reading. The Education Committee of the Metal Trades Association on a recent visit to this plant found a very low percentage of the apprentices breaking their agreements. This fact is attributed to the scope offered to the boys for the exercise of their intelligence in acquiring a grasp of the industry. At intervals during his term the apprentice is called to interview the executive, the interviewers making a typewritten report on each case to the Apprentice Department.

On the conclusion of the term and before the apprentice is placed as a journeyman, the history card, containing records as to industry, deportment, workmanship, mechanical judgment, attendance, class-work, piece-work, use of

books and outside study, is analyzed. It is then passed over to the foreman of the department in which the new journeyman is to be placed. If a senior apprentice shows a preference for certain work he is given a three months' trial. A shop should not, it is suggested, take more boys than it can properly absorb upon graduation, adding of course a certain percentage which will go elsewhere.

The system of shop training described above may need to be adjusted in some particulars before it can be applied successfully to smaller shops. For these it would be better, in Mr. Goss's judgment, to give up apprentice training entirely than to conduct it in such a manner as to bring little result to the shop itself or lessen the confidence of the boys and their advisers in the system of training offered. On the other hand the smaller shop may have special advantages in regard to training, particularly in the matter of personal contact. As a general rule it will be found that "the basic principles of the old-fashioned system are still sound and worthy of modernizing."

ANNUAL MEETING OF PUBLIC EMPLOYMENT SERVICES

THE ninth annual meeting of the International Association of Public Employment Services was held in Buffalo, N. Y., on Wednesday, Thursday and Friday, September 7-9, 1921. The Conference was attended by delegates from the United States and Canada, and also by a representative of the British Ministry of Labour, Mr. T. W. Phillips, C. B. E., head of the Employment and Insurance Department of the Ministry. The presence of Mr. Phillips was one of the outstanding features of the conference and his address on the work of his Department which was delivered at the dinner session on September 7 is printed in full elsewhere in this issue.

The following morning there was a round table discussion on the employment exchange system and the scheme of unemployment insurance in Great Britain at which the delegates were given an opportunity of discussing with Mr. Phillips the many details of the work which it was impossible for him to touch upon in his more formal address.

The rest of the meetings were devoted to the consideration of Employment Service problems and procedure and means for the prevention of unemployment in United States and Canada. A number of interesting addresses on these topics were given and in each case the

ensuing discussion brought out many valuable points and helpful suggestions. At the business meeting which was held on the last day of the conference resolutions were adopted supporting a system of public employment offices on a national basis and recommending a policy of reserving public work as far as practicable for periods of unemployment in order to offset the slackening in private industry.

The election of officers resulted in the following persons being chosen for the coming year:—

President: Bryce M. Stewart, (re-elected) Director, Employment Service of Canada, Ottawa, Canada.

Past President: John B. Densmore, formerly Director General, U. S. Employment Service.

1st Vice-President: Harry Dunderheld at Washington, D.C.

dale, Superintendent, Public Employment Office, Boston, Mass.

2nd Vice-President: J. M. Sullivan, Field representative, U. S. Employment Service, St. Paul, Minn.

3rd Vice-President: Marion C. Findlay, Women's Clerical and Industrial Department, Toronto Employment Office, Employment Service of Canada.

Secretary-Treasurer: R. A. Flinn, formerly Supt. New York State Employment Office, New York City.

Executive members at large: R. J. Peters, Director, Bureau of Employment, Department of Labour and Industry, Harrisburg, Pa.; Thomas M. Molloy, Commissioner of Labour and Industries, Regina, Sask.; C. J. Boyd, General Superintendent, Illinois Free Employment Offices, Chicago, Ill.

The next annual conference will be

WORK OF THE EMPLOYMENT AND INSURANCE DEPARTMENT OF THE BRITISH MINISTRY OF LABOUR

By T. W. Phillips, C.B.E.

[The British Ministry of Labour was invited to send a representative to the Ninth Annual Meeting of the International Association of Public Employment Services to speak on the work of their Employment Department. This invitation was accepted and Mr. T. W. Phillips, C. B. E., Principal Assistant Secretary in charge of the Employment and Insurance Department attended the meeting of the Association which took place in the Hotel Statler, Buffalo, N. Y., September 7-9. Mr. Phillips was the principal speaker at the dinner session on September 7. A stenographic report of his address is here printed in full.]

THE subject on which I have to speak is the Employment and Insurance Department of the British Ministry of Labour. I propose to describe briefly our organization of the Department and give some account of its work on the employment agency side, including what has been done for ex-service men, and also the unemployment insurance side, and I think I also ought to mention the work that has been done, not entirely or even mainly by the Minister of Lab-

our, in connection with the provisions for meeting unemployment. With the short experience which I have had over here I gather that many of the terms used by the employment offices are different from those we use in the United Kingdom. But probably it will be better for me to keep to the terms with which I am familiar and you will be able to translate them yourselves; otherwise it may easily happen that I will make grave mistakes.

ESTABLISHMENT OF THE EMPLOYMENT EXCHANGES.

The employment exchanges were established by the Labour Exchange Act of 1909. The person who more than any other individual was responsible for their establishment was Sir William

Beveridge, who is now Director of the London School of Economics. A great deal of the effort was of course due to the departmental chiefs of the Board of Trade at that time, but generally the institution of the exchanges was due to the big heart, experience and brain power of Sir William Beveridge. The effect of the Act was briefly to authorize the Board of Trade, whose powers in that respect have now been taken over by the Ministry of Labour, to maintain offices for bringing together employers and work people seeking engagement or employment. It has been alleged in some quarters that a year or two later unemployment insurance was started in order to provide something for the exchanges to do, but we thought it unnecessary to refute that in detail. The fact is that at the time when the exchanges were established the scheme for Unemployment Insurance, introduced in 1911, had already been sketched out. The exchanges were recognized to be an essential part of insurance and were therefore being established before the institution of insurance itself in order to provide a basis for it, and that fact was, as you will see by reference to Parliamentary debates, announced at the time, in 1909.

ORGANIZATION OF THE EMPLOYMENT EXCHANGE SYSTEM.

The Exchanges, as no doubt you know, conduct their operations entirely without charge either to the employers or to the work people using them. The first exchanges were opened on the 1st of February, 1910, on which date 61 offices were opened, 19 of which were taken over from the Central Unemployed Body for London, the body established under the Unemployed Workmen Act of 1905. By the end of 1910, 148 offices were opened; by the end of 1911, 261 were opened; by the end of 1912, 414 were opened, the considerable increase in that year being due to the introduction of unemployment insurance. The number has since remained about

this figure; at the present time, 406. In addition to the exchanges proper we have a considerable number of offices which we now call branch employment offices. These offices run on a part-time basis, the total at present being about 1,000, and in addition there are 84 offices which in normal times would be branch employment offices, but owing to the pressure of work are now running full time. This number, 1,000, is larger than the number which we should probably require in ordinary times and we hope very shortly to reduce it considerably. The whole country is divided into areas, Employment Exchange Areas, and each exchange has the oversight of those branch employment offices within its area. The immediate control of the exchanges is in the hands of Divisional Controllers, each in charge of a Division. There are nine divisions in Great Britain, Scotland being one, Wales another, the remaining seven in England. Ireland is at present in charge of the Irish Department of the Ministry and strictly speaking is not a Division. In charge of the whole administrative work of the Department is the Central Office in London.

Other branches of the work are to some extent controlled by the other departments of the Ministry. For instance, finance, which is extremely difficult,—finance is controlled by the Finance Department under the auditor general. Statistics are under the supervision of the Statistical Department of the Ministry, but that department works in very close co-operation with the Employment Department. For the general day-to-day working of the exchanges, we look mainly to the Divisional Controller who is assisted by a certain staff, including a certain number of inspectors. At headquarters we have the Chief Inspector whose duty it is to exercise a general watch over the working — particularly with a view to seeing that all operations are conducted as economically and efficiently as possible. The Chief Inspector has a small force of inspectors under him who travel through the country as

occasion requires. In order to complete this sketch of the organization I ought to mention the various committees, some of which I will describe in some detail later.

First.—The Local Employment Committee consisting in the main of representatives of employers and work people in the district; the Juvenile Employment Committee dealing with juveniles, and finally the Port Labour Committee established at the principal ports to look after the work people. As regards the general layout of the exchanges, one of our fundamental principles is — as no doubt it is in other places — to have separate waiting rooms, entrances, etc., for men, women and juveniles. In some places in the larger exchanges there is a further distinction between skilled men and unskilled men, or between various classes of women, but the possibility of arranging such sub-divisions depends on the nature of the premises available.

We also try in most cases to have in the exchanges rooms available for use by trade unions or by employers' associations for holding their meetings. We make a small charge to cover the cost of lighting and cleaning, and the permission to make use of these accommodations is granted through local employment committees. One of the points which we have to be careful about in that connection is that the rooms should not be used by bodies of a political character, or for other organizations which would infringe the neutrality of the exchanges, as between one political party and another.

Speaking of premises generally, it is an unfortunate but well established fact that the premises of the exchanges are in general quite unsuitable. One of the main reasons for that is that since the exchanges were instituted their work has expanded very largely, and it has not been possible for that reason to keep the exchanges in line with the expansion of the work. We have had to do the best we could with such premises as we

have been able to get, and we have to realize that for the time being, whether due to shortage of building labour, financial stress or other reasons, we cannot do better. The interviews and all dealings with women at the exchanges are conducted entirely by the women staff. Juveniles — that is boys and girls to the age of 18 — are dealt with in most cases under the supervision of the Juvenile Employment Committee and in close co-operation with the educational authorities. The Juvenile Committee can be appointed by the Minister of Labour with representatives nominated by the local educational authority, or it may be the committee is appointed direct by the local educational authority. Certain of the local educational authorities take the view very strongly that the work of finding employment for juveniles is strictly an educational one and that it is one which ought to be undertaken solely and exclusively by the educational authorities. There has been in the past few years a rather unfortunate division of opinion on that point, but recently it has been the subject of special investigation, and we are not without hope that before long a satisfactory solution will be found.

With regard to applicants of professional standing, if I may so describe them, the position is that they are not excluded from the exchange. I think it was one of the earliest enterprises of the exchange to find an opening for an unemployed curate. In practice, however, applicants of professional standing are dealt with by the Appointments Department of the Ministry, a department set up with the principal object of dealing with the employment and training of ex-officers and men of similar educational standing.

EMPLOYMENT EXCHANGE PROCEDURE.

The ordinary procedure at the exchange is no doubt very similar to that adopted by your own employment agencies and one which must be adopted in any case. The applicant is registered,

his qualifications are taken down as fully as possible, and the requirements of the employers are registered on cards. When a workman is directed to a position he is given a card of introduction, the green card, which he takes to the employer, and the employer is asked to sign engaged or not engaged. When dealing with unemployment insurance that becomes very important because the return of the card is evidence that the workman has really gone in an endeavor to obtain that employment. Where the job is at a distance the usual practice is to send by post to the prospective employer through the vacancy exchange, particulars of the applicant, and the applicant is not sent forward until word is received that he has been accepted. In cases of urgency, of course, the work may be done by telegram, and in certain cases, a labouring job particularly, where it is possible to send men in groups without previously securing word that they have been individually accepted by the employer, that is done. Since the beginning of the war we have developed a pretty elaborate system for clearing the vacancies in the various areas, seeing that men are not unemployed in one area while required in another area. We have tried a good many experiments since the scheme was started, and altered the system in various ways. At present it is, roughly, as follows: if there is not a man available for a vacancy at a particular exchange the first step is for the Divisional Office to clear the division; that is, to see that there is no man or woman suitable on the registers in the Division. If that is not successful the vacancy is sent up to London where it is printed in the *National Clearing House Gazette*, which is sent to all exchanges in the country. The *Gazette* is rather a formidable document consisting of a large number of pages with I don't know how many thousand vacancies, arranged according to occupations and districts, with various abbreviations and technical terms in order to make it concise and brief. The *Gazette* is printed in full once a week and every day

amending slips are sent out — whether new vacancies or cancellations of existing vacancies. I may say that the system of printing in the form of a *Gazette* was deliberately adopted after a trial of a system which I think is used in some cases here — that of sending out the vacancies on separate slips. Originally each vacancy was sent out on a separate slip but cancellations came in, and we found during the war that system simply broke down by its own weight. There were so many slips that it would have taken an exchange several hours' work each day to keep the slips in order. The natural result was that they were not kept in order and consequently the system was comparatively valueless.

As regards the railway fares for work people sent out, there is no actual reduction in the fare charged by the railways, but the exchange may under proper conditions advance the fare to the workman; they require as a rule some sort of a guarantee from the prospective employer, either that he will refund the fare himself or that he will deduct it from the workman's wages. In cases coming under the Unemployment Insurance Act, which now of course include a very large proportion of those on the registers, a portion of the fare may be paid out of the unemployment funds. The exact rule at the present time is that one-half of so much of the fare as exceeds 4 shillings is paid out of the unemployment fund. For instance, if the fare is 12 shillings, 4 shillings is paid out of the unemployment fund and the remaining 8s. is charged either to the workman or his employer. In order to illustrate the extent to which these advances are made I have a few figures here. The highest point was reached during the year following the Armistice when 126,427 advances were made. Since that time for various reasons the number has fallen. The depression in trade has had most to do with it but in addition owing to the very great shortage of housing accommodation we have, it has been almost impossible for workmen

to move from one part of the country to another, particularly men with families. To illustrate, during the year ending March 31, 1921, the number of advances made was only 15,230.

The exchanges occasionally receive notification of vacancies in the Dominions or in foreign countries; the rule with regard to them is that no action may be taken by the exchange until express authority has been received in each individual case from Headquarters and we have during recent months been elaborating a system of co-operation with the Dominions, particularly Canada, with a view to dealing appropriately with these vacancies. In doing so we naturally work in very close co-operation with the representatives of the Dominions or other appropriate authorities in London, and it remains to be seen whether in practice it will be possible for the exchange satisfactorily to fill an individual vacancy at such a distance as even Canada is from England, because naturally after all the operations have been gone through with, a considerable number of weeks must elapse, but I am told by the officer in charge of this particular branch of the work that he is very well satisfied with what he has succeeded in doing up to the present time in that direction.

We occasionally see stories, particularly in the newspapers — possibly you have seen them over here—of ludicrous mistakes supposed to have been made by the exchanges in submitting applicants for a vacancy. Most of the alleged mistakes, I am firmly convinced, are mere products of the imagination of the person who mentions them. At any rate, we have never yet come across a single case that can be given, and this problem of picking the right man for the job is really the key to the whole of the success of the work on the Employment Exchange side; I should say that in theory under the Labour Exchanges Act the exchange does not take any responsibility for the suitability of the applicants. In theory all it does is to bring together a workman or work-

woman, who states that his or her qualifications are so and so, and an employer who notifies us that he has a vacancy of that particular kind. It is the business of the employer to satisfy himself whether or not that workman has the appropriate qualifications, and on the other hand for the workman to satisfy himself that the job is suitable. But in practice we have to do more than that—we have to endeavor to do the best we can to secure the most suitable applicant for the time being on the register put forward for the job available, and for that reason we lay great stress on the importance of having a properly qualified staff to interview the applicants and to submit them to the vacancy. Incidentally that raises a point of very considerable difficulty and one which we have not yet solved, and that is whether or not it is essential that the officer should himself be a person with industrial experience in the occupation with which he is dealing. There are certain obvious reasons why that might be desirable. On the other hand, in a large service such as an employment exchange service dealing with practically every occupation, it is impossible clearly to have an expert for every occupation, and another difficulty arises, as for instance when a man who is to be promoted, has to be transferred to some other part where probably the occupations are not those with which he is familiar. Those are some of the arguments on both sides, and we as I say have not yet made up our minds as to which is the best system.

EMPLOYMENT EXCHANGE STATISTICS.

If the Conference will allow me I will give a few figures to illustrate the volume of the work which the exchanges have done. Taking first of all the year 1910, which was the opening year: the number of registrations was 1,400,000. Two years later that became 2,415,000. In 1916, the middle of the war, it became 3,659,000. In 1919, the year following demobilization, when very large numbers of munition workers and sold-

iers were returning usually to their pre-war jobs, the figure became 6,198,000. In 1920, it was 3,185,000. The vacancies notified during those years were in 1910, 459,000; in 1912, 1,063,000; in 1916, 2,049,000; in 1919, 1,951,000 and in 1920, 1,312,000. The vacancies filled, and these figures exclude the casual vacancies, were, in 1910, 374,000; in 1912, 828,000; in 1916, 1,557,000; in 1919, 1,290,000 and in 1920, 942,000. Those last figures, particularly for 1920, illustrate the effect of the great depression which began in 1920.

DECASUALIZATION OF DOCK LABOUR.

One other point I should like to mention in connection with the placing side is the various efforts that have been made toward the decasualization of dock labour. Before the war a good many attempts were made but without much outward appearance of success except in two places, Liverpool and South Wales, and even there, the schemes put in operation were not directly toward decasualization. During the war schemes of registration of dock labourers were set up as most important and a good many, in fact most of these schemes, have remained in operation since the end of the war. Usually these schemes take the form of an arrangement under which every recognized dock labourer is given a tally, the selection of the men for this purpose being usually done under the supervision of the trade union, and men who do not possess tallies are not allowed to work on the docks at all. In some ports they have gone a step further and have arranged that the dockers shall only be taken on at one spot, thereby getting rid of the great difficulty and waste which takes place owing to more men attending at one place than required. But that has not so far been possible in any except some of the small ports because in the larger ports, and most of all London, it would be quite impossible to have one or even a few taking on places. It would require a large number. Owing to the

nature of the employment the effect of these schemes so far has not been that men holding tallies receive a full week's work. In all cases I think a great many more men have received tallies than there is work for at the present time, but I think the schemes have all had the effect of preventing what otherwise would be a great influx of unemployed men to the docks. In former times a man who had not a job went down to the docks to pick up one; now he can't do that unless he has a tally.

THE KING'S NATIONAL ROLL.

With regard to ex-Service men I should like to say a few words. The ex-Service man who is not disabled receives certain privileges and advantages. First of all, he received out of work donation for a considerable period, and now under unemployment insurance, he has a rather more favourable position than the man who is not an ex-Service man. It is also the rule at the exchanges that in all cases, other things being equal, preference should be given to the ex-Service men. In the case of disabled men we have at most employment exchanges a member of the staff who is usually himself a disabled man, whose special job is to look after disabled applicants. A special part of the exchange is set aside for that purpose. One other thing is the National Scheme for the employment of disabled men. That is the scheme under which all employers are invited to put their names down on the King's National Roll, thereby undertaking to keep in their employment a certain minimum percentage of disabled men. The ordinary percentage is 5 per cent, but in particular cases where good cause is shown they may be allowed to go on the roll for less than 5 per cent. For instance in the cotton industry which employs a larger proportion of women than other industries, an arrangement has been made under which, I think, 3 per cent is accepted. Under this scheme there are at present 27,500 firms on the

roll employing a total of 4,625,000 work people, who include 293,000 disabled men. That is in itself a fairly large total, but of course there are a good many more firms who have not yet come on and whom we hope to get. During the great amount of unemployment since last August one of the striking facts has been the comparatively very small increase in unemployment among disabled men. We have, for instance, at the exchanges a special registry of disabled men, men who, owing to their disablement, are definitely handicapped in their search for employment. At the end of September there were 15,000 men on this register; at the end of last July that number had only increased to 17,000 and that in spite of the fact that during the intervening period a very considerable number of disabled men had been discharged from the hospitals. That is a fact which is to be attributed to the King's Roll, but in general employers in the United Kingdom are doing their utmost to keep on their disabled men even when they have to discharge others. The training of disabled men is not a matter for the Employment Department; it is administered by the Training Department of the Ministry, although working in close co-operation with the Employment Department.

UNEMPLOYMENT INSURANCE.

To come now to Unemployment Insurance. The first legislative enactment was Part II of the National Insurance Act of 1911. That Act also dealt with Health Insurance. As a matter of convenience, the two were put together in the same statute, but otherwise the two are quite distinct. They are administered by separate departments and subsequent legislation which has been frequent on both sides has been in two separate sets of acts. The Act of 1911 selected for insurance certain trades which had more than the average amount of unemployment and which in other ways were regarded as suitable for what was at the time a very considerable experiment.

Those trades were building, engineering and shipbuilding. The weekly rate of contribution from employer and employee was 5 pence; that is to say a 5 penny stamp had to be affixed to the unemployment book by the employer each week, and when the employer had put the stamp on he was entitled to deduct half of it from the workman's wages. The State added one-third making a total of 6 $\frac{2}{3}$ pence a week. I should say at the time no distinction was drawn between men and women because in the trades covered there were practically no women employed at that time. The rate of benefit weekly was 7 shillings payable at so much a day, 1s. 14d. a day, and no benefit was payable for the first six days of unemployment. The benefit might be drawn either from the employment exchange or from the trade union in cases where the trade unions had made an arrangement for this purpose with the Department, and one of the conditions of such an arrangement was that the union should add to the 7s. out of their own funds at least one-third—that is at least 2s. 4d. The cost of administration was borne in the first instance by the State, by the Treasury, but in addition to that cost a sum equal to one-tenth of the annual income of the fund was paid to the Treasurer, that is to say nine-tenths of the contribution was in any event applied to the payment of benefit.

One of the big problems that we had in connection with that act was that of demarcation. Certain trades were selected for insurance and we very soon found that the boundaries between one trade and another were very vague and indefinite. I don't propose to weary you with many examples of that. I will say that the umpire whose unfortunate job it was to give decisions on the point—fortunately they were final and conclusive—gave many thousands of decisions. To illustrate the sort of thing we had to decide: Those were the early days of aeroplanes and one of the type of trades insured under the act was the construction of aeroplanes, but a manu-

facturer said "I have been trying to build aeroplanes for a long time but none of them have ever flown." Another point the Umpire had to decide was this—The construction of a building was insured and one man was very anxious to know whether or not hen coops were buildings.

THE EFFECT OF THE WAR.

When the insurance had been in operation for a comparatively short time the war broke out and resulted as you may imagine in a very great increase and change in the work of the exchanges. The exchanges were used very largely for diverting the man power of the country from peace work to war work. Then various employment schemes were invented for bringing men out, for enrolling women particularly in the War Service Corps and recruiting women for the munitions work. One of the rules laid down was that women for munitions work must in all cases be recruited through the exchanges. Another item added during the war was an amending act in 1916 bringing under insurance certain trades which were very largely employed in war work, principally the metal trades, rubber, chemical and one or two others. That brought in about a million and a half additional work people, many of them being women, making the total increase accordingly. When the Armistice was signed in November, 1918, further very heavy burdens were thrown on the exchanges. On the one hand an elaborate demobilization scheme was worked out, based on the principle that the men were to be demobilized strictly in accordance with industrial needs. In practice that was not carried out to anything like its full extent, but even so the exchanges had a very great volume of work thrown upon them and had to deal with a good many million forms, etc. in carrying that out. The second item was the out-of-work donations. As I have explained, the insurance scheme covered only $3\frac{3}{4}$ million work people. It had all along been

intended that the ex-Service men should receive something in the nature of donations when demobilization took place. Owing to the increase of registrants the decision ultimately taken was to pay out-of-work donation which was free to all civilian workers and to all ex-Service men, and it was paid at a comparatively high rate. At the outset it was 39 shillings a week for men with allowance for children, and 24 shillings for women. The rate was reduced in certain cases to 24 shillings with allowance, or 20 shillings without allowance. That scheme for civilians continued for a year to the end of November, 1919, when it was stopped; for ex-Service men it went on with various modifications until the end of last March, after which it practically came to an end. During that period the amount of pay to ex-Service men up to March 31, 1921, was £39,500,000. To civilians up to the year 1919 was paid £11,750,000 making a total of rather more than £51,000,000. The number drawing donations increased until May, 1919, when it reached its highest point. Owing to this large increase and the general state of public feeling in the matter, an inquiry was made in 1919 by a Committee presided over by Lord Abercrombie, and that committee made a report in June, 1919, and another in July, 1919, and the general effect of the report was that there was no substantial reduction under the scheme.

LOCAL EMPLOYMENT COMMITTEES.

At this point I ought to mention again the Local Employment Committees which form a very important and indeed essential part of our existing organization. In the early days of the exchanges a certain number of advisory committees consisting of employers and work people were set up. Their terms of reference were strictly limited. They were only allowed to consider matters put before them by the Department. For this reason and others, they were not in touch with the situation on the one hand and not in touch with any

particular locality on the other and could not initiate a subject of their own accord. In 1917, as preparation for demobilization, it was decided to set up a different kind of committee in every area and these committees are now called Local Employment Committees. They consist in the main of numbers of employers and employed nominated by the more important associations on both sides in particular areas.- The number of members varies according to the size and importance of the town. In addition to these members we generally have a few others who are not specifically employers or employed,—for instance, a representative of the ex-Service men's organization, of the Territorial force or of the local educational authority, and one or two people of that kind, although we keep the number down to quite low limits. The chairman is not nominated by the committee but appointed as an impartial person by the Ministry. We select some local gentleman who carries weight in the locality, and I am glad to say that in all cases so far we have been able to secure the services free of charge of very influential men in every locality. At the present time there are about 250 of these committees altogether with perhaps 5,000 or 6,000 members, not including a very large number of others who act on the various sub-committees which are appointed. During the donation scheme one of the items of work performed by these committees was to determine whether or not a particular individual was to receive donations. They had to be satisfied in each case that the applicant was genuinely seeking employment and unable to obtain it. That was the form of it. The general procedure was that applicants whose cases were not absolutely straightforward would come up and be granted an interview. Then after a time they would be reviewed again and so on. This system of using the committees to review the claims to donations has since been applied to unemployment benefits as I shall describe presently.

EXTENSION OF UNEMPLOYMENT INSURANCE IN 1920.

During the closing years of the war there was a great deal of discussion with regard to the possibility of extending unemployment insurance to all industries, but for various reasons it was not possible to bring it to any measure of fruition, and for that reason, as I have mentioned, out of work donation was adopted. The discussion was continued after the Armistice and finally resulted in the Unemployment Insurance Act passed in November, 1920, which extended unemployment insurance to practically the whole working population with the exception of agriculture and private domestic service. There are certain other exceptions, and in particular certain groups of permanent employment such as permanent railway service or the permanent employees of the local authority. They are excepted under certificate of the Ministry of Labour.

The questions of demarcation to which I referred a short time ago have largely disappeared owing to the wide extensions of the act, but to some extent they still remain with us and are now determined by the Minister himself, acting of course through the Legal Department. Pertaining to private domestic service, a question arises, whether the servants employed in clubs are insurable or not. The rule laid down by the Act is that a domestic servant employed for purposes of gain is insurable, for instance a servant employed in a lodging house is insurable but not in a private residence, and the question arises, of course, whether those in clubs are insurable or not. As regards the persons included, except for those I have mentioned, all men who are manual workers are brought in and also non-manual workers whose annual pay does not exceed £250 per annum.

In order to be entitled to benefit, the ordinary rule as laid down by the Act is that first of all at least 10 contributions should have been paid; that the

applicant is available for work and capable of work and unable to obtain employment; that he does not refuse suitable work when offered to him. Then, again, that he has not lost his last job under circumstances which disqualify him. For instance, if he has been discharged for misconduct, or if he left his last employment voluntarily without just cause; or again, if he lost his last employment owing to a trade dispute at the works at which he was employed, that is to say not merely that he himself was in a trade dispute—if there was a dispute at the works he was employed, no matter between whom, and for that reason he lost employment then he also is disqualified. That has been subject to a good deal of criticism recently by trade unions, and may become subject to alteration, provided that some sort of agreement can be made between employers and work people. This rule of course applies to women too. Then, again, one of the ordinary rules is that not more than 26 weeks' benefit may be drawn in any one year, and that not more than one week's benefit may be drawn for every 6 contributions paid. For instance, when a workman has paid 60 contributions for 60 weeks then he or she becomes entitled to 10 weeks' benefit, no more.

If any question is raised as to eligibility—if the employer says, "This man left voluntarily" and the man says, "No, I was discharged," the first person to determine the point is the Insurance officer of the Ministry of Labour. If he decides against the workman then the workman or his trade union if he belongs to one, has the right to appeal to the Court of Referees sitting in the District. The Court of Referees consists of two industrial members—one taken from a panel of employers' representatives and another taken from a panel of work people's representatives—and an independent member nominated by the Ministry of Labour. That you will observe is a Court which is not under the control of the Ministry of Labour. Then finally there is an appeal from the Court

of Referees to the Umpire who is a judicial person appointed, not by the Ministry of Labour, but direct by the Crown. Still less is he under the control of the Ministry of Labour. The Umpire's decisions are final and conclusive. There is no appeal to any other Court. Appeal may be made to the Umpire either by the Ministry or by the trade union, or with the leave of the Court by the individual applicant—that is to say an individual applicant cannot appeal unless he gets special leave of the Court.

The system I have mentioned has been continued under the new Act. The one alteration made was this, that previously no payment was made to the unions for administration, but now payment is made not exceeding one shilling for every week's benefit they pay out. The number of trade unions and other associations participating is at present 193 (other associations, I should say, included associations of work people other than unions). The number of members in these 193 associations is 2,110,000. Out of these, 22 are Friendly Societies or bodies of a similar nature and it is estimated that perhaps one-seventh of the benefits paid weekly is paid through trade unions. The contributions under the act of 1920 were 8d. a week for men—6½d. for women, and to this the State added one-quarter. The benefit was 15 shillings a week for men or 12 shillings a week for women. The cost of administration was borne in the first place by the State, but 10 per cent of the revenue was applied to this item. Owing to the fact that of the twelve millions now under the act eight millions came under it in November at a time when unemployment was pretty severe already, it was obviously necessary at the outset to modify the strict rules with regard to eligibility; that is, new entrants could not begin to benefit under the Act for one year owing to the rule pertaining to paying ten contributions, etc. In the first Act it was arranged that any person who had paid four contributions should during the first year of the Act be entitled

to eight weeks of benefit. This was in November. Then it was pointed out that owing to the large amount of unemployment a great many people normally employed could not pay contributions because they could only pay while employed. Accordingly, an amending act was passed in December, 1920, to the effect that those who could show they were employed for a certain period in an insured trade could get eight weeks' benefit even though they paid no contributions at all. That was the state of affairs until March of 1921.

EFFECT OF INDUSTRIAL DEPRESSION ON INSURANCE SCHEME.

By this time unemployment instead of getting better was continually getting worse and the eight weeks' benefit allowed in November had practically become exhausted in a great many cases and therefore something else had to be done. The arrangement made was this—the period from the beginning of March, 1921, to the beginning of July, 1922, a period of about 15 or 16 months, was divided into two roughly equal parts, and it was arranged that any person who could show that he had been employed in any insured trade for at least 20 weeks since the beginning of 1920 should get in each of these periods 16 weeks benefit. Moreover, at that time the rate of benefit was increased to 20 shillings for men and 16 shillings for women. The contributions were not altered at that time because it was not the end of an insured year. It was arranged that they should be increased as from July of this year. These changes were financed in this way; owing to the small amount of unemployment during the war and to the relief given to the unemployment fund by the out-of-work donation scheme, a very large balance had accumulated in the Unemployment Fund amounting to more than 20 million pounds. In the

original Act this 20 million pounds had been treated as capital and the income on it—roughly one million pounds a year—was regarded as so much annual revenue for the Fund. In March, 1921, that 20 million was no longer treated as capital, but was made available to be spent in the period up to July, 1921. That practically meant that during that period 20 million was added to what otherwise would have been the revenue. That meant also that the annual income which would otherwise accrue would be reduced by one million pounds, and to make up for that the contributions were increased by something like a penny a week. That was the financial scheme in March, 1921. It was hoped that under that system we should be able to carry through, and might probably spend the 20 million by July of next year, but we felt fairly happy about that because contributions were on draft to cover it. But unfortunately employment instead of getting better was getting worse. The coal strike took place at the end of March with the result that 100,000 or 150,000 people were added to the members drawing benefits every week. By the end of June we were paying at the rate of two million pounds a week in benefits, and our income was in the neighborhood of £330,000. Obviously therefore we had practically exhausted the fund, there being only a few million pounds in the till at the end of June. The arrangement that exists under the Act passed in July was this—on the one hand the benefit was reduced to 15 shillings for men and 12 shillings for women; on the other hand the contributions as from the beginning of July were very suddenly increased, increased beyond what they would otherwise have been at that date under the provisions of the amending Act of March.

The contributions are now 15d. for men—8d. from the employer and 7d. from the employee, and 13d. for women, 7d. from employers and 6d. from employees. This reduction in benefit and increase of contributions was, however,

deliberately and definitely made temporary, that is to say, it was to continue only until the unemployment fund again became solvent. It was realized that owing to the very large number unemployed, even with the cessation of the coal dispute at the end of June, we should be running into debt. Under the Act of 1920 as amended in March 1921, we had power to borrow from the Treasury £10,000,000, but that was not enough and under the new act we took power to borrow £20,000,000, and the estimate made was that upon a reasonable assumption we shall be by July of next year about 16 million pounds in debt and the following year we shall just about pay that back. That is to say by July, 1922, on the assumption that unemployment is better we shall get straight. One other thing that was done in that Act was to add another six weeks to the amount of benefit allowed. As I mentioned, 16 weeks could be drawn between the beginning of March and beginning of November. Owing to the continuous amount of unemployment a large number of persons had drawn their 16 weeks and had nothing to look forward to.

SPECIAL SCHEMES FOR PARTICULAR INDUSTRIES.

One of the important provisions in the Act of 1920 was that providing for special schemes for industries. When proposals for the Act were being discussed the position of certain industries which claimed that they were not liable to unemployment was discussed and they were not in general compelled to come in on the general scheme to pay the same contributions and get the same benefits as everybody else. In order to meet them a clause was put in the Act that if any industry was prepared to set up a scheme giving benefits at least as good as under the Act then it could set up such a scheme subject to the approval of the Ministry. Once such a scheme was approved it became in effect a little Act of Parliament for its own industry.

It was compulsory on all individuals in that industry. It applied to everybody in that industry. It was not considered practical to allow an association to be formed of persons who wished to hold their own risk. Something of that sort can be done under Health Insurance but that was not practical under Unemployment Insurance. That was the provision of the Act, and the possibility of setting up special schemes has been very much discussed, particularly by the joint industrial council. For various reasons up to the present very little has been effected, largely due to the unemployment and great depression which has hit a good many of the trades which in ordinary times regard themselves as very little subject to unemployment, particularly the textile industry. Another reason was, when they came to look into the matter thoroughly, they found it extremely difficult to say where an industry began and where it ended — all sorts of complications arose both as regards the actual processes and among organizations concerned. It is a very difficult problem to define a large industry and say "This is the industry—everything inside comes under and everything outside does not come in." When the new Act was passed in July, 1921, it was necessary to provide that until the fund was solvent again no special schemes should be set up because all industries had had their share of benefit and it was right that they should stay to make it good again when employment became better. There was one exception to that. In order to keep faith with the industries which had gone a considerable way in setting up schemes, it was provided that those which had submitted a completed scheme to the Ministry before a certain date in July should be allowed to go on with it. One of the industries in that position is the Insurance industry itself — that is the staffs of the insurance companies—and also the assistants and trade union staffs engaged in Health Insurance. They have had their scheme actually approved and it is now in operation. One other

industry has a scheme under consideration and that is the Banking industry. Neither of these is large and both consist of people who in any event would be among the most permanent.

PROVISION OF WORK FOR THE UNEMPLOYED.

With regard to the provisions for work for the unemployed, I might say the only statutory provision is the Unemployed Workmen Act of 1905, which provides for the setting up of committees which may under certain conditions provide work. The operation of this Act was not found satisfactory and it has not been applied since the end of the war. What has been done falls under various heads. The largest undertaking perhaps is that for the making of arterial roads under a scheme which had been drawn up before the war. Under that head the Government had available a sum of £10,400,000 to cover the cost of the scheme. One half of this sum was available as a grant to the local authorities; the other half could be issued as a loan repayable over a certain number of years. There were certain other grants made by the Government in connection with roads which were not arterial roads, but which were important for public reasons.

In connection with the housing schemes of the Ministry there was a good deal of work in connection with clearing sites, making roads, draining, etc., which it was possible to accelerate in advance of the actual building of the houses, a very short process, and the sites could be prepared and in a number of cases with certain assistance it was possible to accelerate that. Then again, in order to assist the municipalities in developing various kinds of work, the Unemployment Grants Committee was set up having available funds of £3,000,000. They were prepared to make a grant out of this fund to any local authority starting work, to the extent of 60 per cent of the wage cost, which amounted to perhaps 30 or 40 or 50 per cent of the total

cost. Then again the various Government establishments introduced a system under which short time was deliberately worked. For instance all the employees in a particular department were laid off one week in six thereby enabling one-sixth of the total number to be added to the staff. That sort of arrangement was made in a good many places. And a great deal of miscellaneous work has been started by the municipalities in particular. The Ministry of Labour as such has no funds whatever for this purpose. Their function is limited to determining which areas should receive assistance. Either on application or possibly on their own initiative they forward a certificate to the appropriation department to the effect that a certain amount of unemployment exists in so and so area and therefore that area is eligible for a grant. One piece of legislation which developed that principle was the Unemployment Relief Work Act which provided that if land was necessary, was required urgently for road work in relief of unemployment and if the Ministry of Labour certified that serious unemployment existed, then entry could be had on that land within seven days, irrespective of any other legal difficulties that might come up.

VALUE OF THE EMPLOYMENT EXCHANGES.

This is a sketch of the main items of work that we do in the Employment Department. But, you will probably ask, what does it all amount to? What is the value of the work to the community? In assessing the work of the exchanges it ought, I think, to be recognized that almost since the date when they were instituted they have suffered from what I may describe as a continual series of earthquakes. First of all there was the war which began two years after the date when Unemployment Insurance was started, and which changed in very many ways the nature of their work, reduced their staff and altered their outlook in many directions. Then demobilization came along and threw on the

shoulders of the exchanges, with their depleted staff a great deal of work—demobilization itself and then the administration of the out-of-work contributions. We hardly got clear of that when the Unemployment Insurance Act coupled with an unprecedented depression in employment came upon us. To illustrate this let me mention that the number insured jumped from $3\frac{3}{4}$ million to 12 million. On the other hand the number on the local registers of the exchanges at the end of last June or last August was 300,000, and at the end of June this year it was 2,000,000. In addition there were 1,000,000 on short time and drawing unemployment benefit on that account.

The exchanges, apart from the earthquakes as I describe them, have met with a good many obstacles in the course of their career. Perhaps the main one has been the refusal on the part, particularly, of employers, to assist the exchanges. They have not been accustomed to use public employment agencies and therefore they do not use them. That can only be overcome by time and effort. Then again, there was the fear of trade unions that the exchanges were going to supply a non-union shop with men or to supply strike breakers. On the other side, the employers thought that the exchanges were places run by and in the interests of trade unions. In that connection, there have been two points on which we have had to lay down a line of policy which so far has been effective. First, trade disputes. What is to happen if a strike takes place at a factory and the employer says to the exchange: "I want some men to take the place of men on strike." The rule we have laid down is that the exchange accepts notification of the vacancies but at the same time it accepts from any authorized person whether from one side or the other, a statement that there is a trade dispute and that the reasons of the dispute are so and so, and in notifying any such vacancy to an applicant the exchange at the same time notifies the applicant that a dispute exists and also furnishes

a statement, without accepting responsibility for it, as to the cause and nature of it. That is the system on which we work. I do not pretend it is entirely satisfactory, but as far as we have been able to see it is less unsatisfactory than any other system. We are in a very difficult position. The second point is as to the payment of standard rates of wages. It has often been complained that the exchanges should not deal with vacancies unless either the trade union rate of wages or a recognized wage is offered. We have held hitherto that it would be a breach of neutrality as between employer and workman to do anything of that kind. In certain cases wages are determined by law, where trade boards exist or in certain other cases. To pay less than the minimum is illegal and in those cases the exchanges will not receive notification contrary to law. But apart from that the exchanges do not take cognizance of the fact that the wages are less than standard. One point in that connection I should mention is that where wages are definitely less than the standard the exchanges do not attempt to advance fares. In that connection I may say to impress the reverse of the situation that not very long ago in connection with the housing scheme we were urged very strongly by employers not to accept vacancies in the building trade which would pay more, because on the state housing schemes they were not allowed to pay more than the established rate.

The exchanges have also suffered a good deal from time to time by statements in the press and elsewhere, largely conducted on the lines of a campaign against Government service generally. These statements when investigated are in a great majority of cases misinformed, if not entirely malicious. To illustrate, a very short time ago there was a statement in the press commenting in a leading article that the Ministry of Labour Employment Department had fixed £50 a year as the minimum wage for a general servant. The only element of truth in that was that we were not pre-

pared to circulate to other parts of the country vacancies for general servants offering less than £35, £50 for cooks. It was simply and solely that as a matter of business it was not worth while to do that unless they offered that minimum; but that was distorted and no doubt it was generally believed that we regarded £50 as a minimum wage for general servants. In getting the support of public opinion and particularly the support of employers and workmen in an area we have found the existence of a local employment committee of the greatest importance. It is one of their functions to see that the exchange is conducted on principles of neutrality and on lines which commend themselves to the employer and work people in the area, and that is certainly a factor which gives one a good deal of hope for the future. With the assistance of these committees we shall be able to make more progress than we have in the past.

In the period since the Armistice, and particularly since last autumn, the position has been that in almost all cases there have been no jobs whatever to offer. For instance quite recently I was in a large exchange where they had some 7,000 men on the register and the total number of jobs they had unfilled was 8. For these jobs specialists of some kind or another were required, none of whom could be found among the 7,000. We are hopeful that things will be better in the early future and we intend to develop the placing side, a thing we have not been able to do in the absence of any placing to do.

GENERAL OPINION REGARDING UNEMPLOYMENT INSURANCE.

As regards unemployment insurance, this, as you may know, is very frequently called the unemployment insurance dole. As one of the members of Parliament put it in a recent debate, he didn't know why it was called the unemployment dole unless it was the conviction it was something given gratuitously. But I think I am right in saying

that the general feeling of employers in Great Britain is that it is worth their while as employers to do something to remove from the minds of the work people the fear of unemployment. That of course in itself does not tie them down to any particular method of giving real assistance, but at any rate I think that is a pretty general frame of mind. Employers have approached the subject sympathetically and offer their assistance, and while they very probably realize that a good deal can be done to reduce unnecessary unemployment still unemployment cannot be prevented under the existing industrial organization, or probably under any organization. There will be some times when less production is required than at others. Therefore, jobs necessary or possible before are not to be had, and always we come in the end to the position that in one way or another something ought to be set aside in good times to provide for bad.

The actual provision of work during periods of depression has not in the past ever been a success and I see no reason to suppose in general it can be a success in the future. Something on a limited scale is possible, in the items I have mentioned. We very much regret that anything done in the previous years has not been very successful. There is nothing for women, nor anything in which the skilled craftsman may be employed. The scope of anything of that kind is necessarily very limited and on the other hand the expense is very great and particularly at the present time when costs are very high. So speaking generally that is not regarded as practical.

The criticism that exists is directed to detail, and on this one is apt to be misled by statements in the press and elsewhere, which of course are selections made for that purpose. There are 3,000,000 persons drawing unemployment benefit, and you would naturally expect out of 3,000,000 persons there would be a few who misrepresent the facts. To illustrate, there was a press article some time ago about a woman who went to a magi-

strate in London and said that she had lost her job and her husband deserted her and she wanted an order of maintenance. The magistrate said "Can't you work?" and she said "No, I am totally incapable of work—too old," and then he discovered she was drawing unemployment benefit and naturally proceeded to make pungent comment on the payment of benefit to this woman. Such cases are reported to the exchange, and we interviewed the woman and found she had been 20 years in her last job and had just left it due to the depression. We said "Why did you tell the magistrate that?" and she said, "Oh, I had to tell him something or I couldn't have got my maintenance." The special point to which criticism has been directed is the payment of unemployment benefit to women in the face of the great shortage of domestic servants, private domestic servants, and that of course raises a very difficult point. In the first place, private domestic servants are not insurable and therefore a woman cannot draw benefit. In order to draw benefit she must be something else, a worker or servant in a hotel. The question always arises, have you the experience necessary, are you a skilled worker in some other trade, have you domestic ties which prevent you, etc. This thing has been gone into very thoroughly, but still as far as we can judge there are few if any women drawing benefit who really are domestic servants in any proper sense; women who would in the ordinary way either do domestic service or would be acceptable by mistresses. The reasons for the shortage of domestic servants are quite definite. When out of work donation was being paid to civilians, the same thing was said — "You are paying out of work donations to all these women and that is why we can't get domestic servants." The donation was stopped in November, 1918, but the domestic servant problem is still as acute.

Some of these criticisms and possibly to some extent the amount of payments of unemployment benefit are occasioned by the fact that as the unemployment

scheme was only started in November we have not been able to apply the ordinary rules. The most effective of these rules is the one which provides that only one week's benefit is to be paid for every 6 contributions made. The object of that rule is to get rid of what is regarded as the uninsurable risk, that is to say the man who is rarely at work at the best of times and therefore if benefit is given free will be always drawing it. Under that one rule he may occasionally get a little benefit but so little that it won't make any difference. Under the present state of affairs he is able to show that he has been employed for a certain period and, generally speaking, can say that if he could get work he would take it; and there is no limit except the maximum, unless the local Employment Committee sets a special maximum, as they do sometimes. So that from that point of view it is probable that to a certain extent men who under the 1-in-6 rule would be entitled to a small amount of benefit are getting a larger amount at the present time.

REPORT OF COMMITTEE OF INQUIRY.

I should like to call the attention of the members to the report of the Committee, of which the chairman was Mr. G. N. Barnes, set up to inquire into the Employment Exchanges. That committee in its composition was certainly by no means in favour of the exchanges. In fact it set out to see whether or not some other system might not consistently be adopted, and after a very careful investigation and taking of evidence they came to the conclusion that the exchanges were necessary and ought to be approved. There was one dissident but even he, when you look carefully at his report, agreed that the exchanges must be continued, and the only point in which he differed was that he did not agree they ought to be approved.

One other thing which might be consulted by those who wish to test the state of public opinion on this matter is

the debates in the House of Commons, which broadly speaking are a pretty good reflection of public opinion on almost any important subject. There were a number of debates on unemployment and on the work of the Ministry of Labour, and I should add that these reports

should be studied in the original and not in the press abbreviations. I think I am right in saying that the general tenor of all these debates was to regard the exchanges and unemployment insurance as a permanent part of industrial organization.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Similar agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement the rates of wages for the principal classes of labour are given, with other information of general interest.

Printing and Publishing

REGINA, SASK.—EMPLOYING FIRMS, AND STEREOTYPERS AND ELECTROTYPERS' UNION No. 116. Agreement in effect from May 21, 1921 to May 21, 1922.

Hours: per day, eight, per night, seven. No pooling of hours to be allowed.

Employer and foreman to be sole judges as to number of men to be employed.

Each office to have one apprentice, and one additional where four journeymen are employed.

Apprentice Scale: per week—day work, \$18; night work, \$20; \$1.50 per week, increase every six months.

Foreman to receive not less than \$5 over journeyman per week of six days or

six nights. Journeyman's scale: Per week—days, \$46; nights, \$49; overtime, for four hours, time and one-half; thereafter, double time. Rate for Dominion Day, Labour Day and Christmas Day, double time, other holidays, time and one-half; on morning newspapers in lieu of overtime, a night's work to consist of five hours. Sundays, double time.

Only union members to operate machines connected with stereotyping. Union members not to furnish or receive work for or from unfair shops.

No strikes, walkouts or boycotts to take place. Differences to be submitted to an arbitration committee of one from each party and a third agreed upon by them. Pending settlement, work to be continued.

Food, Drink, Tobacco

VANCOUVER, B.C.—LOCAL BAKERY FIRMS, AND BAKERY SALESMEN, No. 371. Agreement in effect from May 1, 1921 to May 1, 1922.

All salesmen to be union members.

Wages: per week—bakery salesmen, \$28.50; stablemen, seven days, \$28.50. Men without previous experience, \$5 less than scale for first four weeks.

Six days to constitute a week for salesmen; day of rest to be Sunday. Salesman required to do repairs to machine or wagon on Sunday to receive time and one-half. Salesmen not to be required to deliver goods on Sunday. Holidays to be granted with pay and paid double if work is done.

No salesman to be discharged for upholding principles of organized labour.

One week's notice of discharging or quitting to be given.

Hours per week, fifty hours; week preceding holiday, fifty-five hours; week following holidays, forty-five hours. Overtime, time and one-half. Wednesday to be a half-holiday unless preceding or following a public holiday.

Disputes: drivers assisted by union officials to endeavour to effect settlement with firm, failing settlement dispute to be referred to arbitration committee of two from each party with an independent chairman; decision to be binding.

Salesmen's wages to be adjusted quarterly by figures from the *Labour Gazette*.

New employees to apply for membership in union after 30 days.

Months of March, April and May to be taken as basis for first quarterly adjustment of wages. Adjustment to be made payable August 1, and once every three months thereafter, and in no case to fall below minimum wage specified in this agreement.

Building and Construction

EDMONTON, ALTA.—CITY OF EDMONTON, AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS. Agreement in effect from April 1, 1921, to December 31, 1921, and from year to year or until a new agreement is negotiated.

Wages: Per hour — Carpenters at street Railway Car Barns, 82 cents. Foremen, per hour additional, 5 cents.

Holidays: seven days' vacation per year with pay, after one year's service. Sundays and holidays, time and one-half.

Hours of labour: eight per day; four on Saturdays. Overtime, time and one-half. On double shift, single time pay; no man to work above eight hours in twenty-four at straight time rate.

Employees producing medical certificate to have two weeks' sick pay in any one year.

In reduction of staff, superintendent to lay off men having regard to efficiency, laying off first the last man employed and so on. In case of re-employment, last man laid off to be given preference. Men having been advanced to be reduced to former position in preference to being laid off.

Grievances to be investigated by a committee of employees having right of appeal to Superintendent, and, if decision be not satisfactory, to City Commissioners, or City Council, and further to a Board of Conciliation.

ST. CATHARINES, ONT.—ELECTRICAL CONTRACTORS, AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS No. 303. Agreement in effect from May 1, 1921 to May 1, 1922.

Hours per day, eight; Saturday, four.

Wages: Per hour—journeymen wiremen, 85 cents; four-year helpers, 70 cents, three-year helpers, 55 cents, two-year helpers, 45 cents, one-year helpers, 35 cents, shopmen, 55 cents.

Overtime: until 10 p.m., time and one-half; thereafter also Sundays and legal holidays, double time.

Railroad fares and time to get to job to be allowed men working out of town, also board when staying overnight.

A firm may hire one helper to a journeyman and one improver to three journeymen. Helpers after four years to be classed as journeymen.

Union to supply competent help when required; otherwise non-union men may be hired.

Any violation of agreement to be taken up immediately by representatives of both parties.

CALGARY, ALTA.—MASTER PLASTERERS, AND PLASTERERS' LABOURERS' UNION. Agreement in effect from June 1, 1921 to June 1, 1922.

This agreement appeared in the August issue of the *LABOUR GAZETTE*, on page 1048, but the minimum wage was erroneously stated to be 63¾ cents per hour, \$5 per 8-hour day. This should read 68¾ cents per hour, \$5.50 per 8-hour day.

SASKATOON, SASK.—SANITARY AND HEATING ENGINEERS, AND PLUMBERS' AND STEAMFITTERS' UNION No. 264. Agreement in effect from July 13, 1921 to May 1, 1922, with one month's notice of change, or from year to year thereafter.

Hours of labour: eight per day; four on Saturdays. Saturday afternoon to be single time for freeze-ups only.

Minimum wage: per hour—journey-men, 90 cents.

Overtime: until midnight and Saturday afternoons, time and one-half; after midnight and Sundays and holidays, double time. Expenses to be paid for on out of town work.

Union men to work only for registered employing plumbers. Only union men and those eligible to join to be employed. All employees to be covered by Government Insurance.

Only one apprentice to either trade to be employed for each three journeymen in such trade.

Grievances to be referred to a committee of three from each party; no man to be dismissed before a decision shall have been rendered, decision being final.

EDMONTON, ALTA. — ELECTRICAL CONTRACTORS AND ELECTRICAL WORKERS' UNION No. 544. Agreement in effect from July 1, 1921 to December 31, 1921.

Only union members to be employed if available. Members to work only for contractors who have signed the agreement.

Hours of labour, eight per day; four on Saturdays.

Overtime, time and one-half; after midnight, (after 10 p.m., Saturdays), and Sundays and holidays, double time.

Transportation and extra expenses if on out of town work to be paid by employer.

Apprentices to work only as assistants to journeymen for first three years; not more than one fourth year apprentice to be employed for two journeymen.

A journeyman whose work fails to satisfy inspection department to make

good any defects at own time and expense.

Minimum wages: per hour—journeyman, 95 cents; apprentices, first 6 months, open wage; second 6 months, 35 cents; second year, 50 cents; third year, 55 cents; fourth year, 65 cents.

Transportation—Electric Railways

EDMONTON, ALTA.—CITY OF EDMONTON, AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, No. 569. Agreement in effect from April 1, 1921, to December 31, 1921, and from year to year until a new agreement is negotiated.

Motormen and Conductors.—Wages: Per hour—on two-men cars, first six months, 52½ cents; second six months, 57½ cents; beginning second year and thereafter, 62½ cents; one-man cars, first six months, 60 cents; second six months, 62½ cents; third six months, 67½ cents; fourth six months, 68 cents.

Motormen and Conductors to be allowed seven (nine-hour days) holidays per year with pay, after one year's service. Legal and civic holidays, time and one-half.

Hours of labour, nine per day. Overtime after nine and one-quarter hours, time and one-half.

Uniform to be furnished after six months' service, employee paying half cost. City to furnish subsequent uniforms yearly or as required, and all caps, badges and buttons. City to furnish overcoats at least every two years.

Employees not to be paid for training period. Employees must be twenty-one years of age.

In reduction of staff, last man employed to be first laid off; in employing men, last man laid off to be given preference. A man who has been promoted to be reduced rather than laid off.

Grievances to be investigated by a committee of employees having right of appeal to the Superintendent. If decision then rendered is not satisfactory, appeal may be made to City Commis-

sioners or to City Council, or further to a Board of Conciliation.

City not to discriminate against any employee for being or not being a union member.

Barn Men.—Wages: Per hour—car cleaners (able-bodied) 60 cents; car repairers, first year, 62 cents; second year, 65 cents; third year, 72½ cents.

Trade Mechanics.—Wages: Per hour—painters, 75 cents; blacksmiths' helpers, 65 cents; labourers, 60 cents; sand men, 65 cents; painters' helpers, 65 cents; equipment of car man per month, \$130.

Barn men to receive seven (eight-hour days) holidays in each year with pay after one year's service. Sundays and legal holidays, time and one-half.

Hours per day, eight, Saturdays, four. Overtime, time and one-half. Hours per night, eight, six nights per week. Overtime to be paid to night men for seventh consecutive night and for work on holidays. As large a portion of employees as possible to have nights off at week ends. Overtime work to be taken by employees in rotation as far as may be convenient. Barn men to be provided with rubber boots, sheepskin coats and slickers for emergency work.

In reduction of staff, last man employed to be first laid off; in increasing staff, last man laid off to be given preference. Employees having been promoted to be reduced in preference to being laid off.

Trackmen, track greasers and flagmen.—Wages: Per hour—labourers, 60 cents; trackmen, 62½ cents; foremen, 70 cents; track greasers, 60 cents; per month, flagmen, \$105. Hours of labour, eight per day; overtime, time and one-half. All men under this head to have one day off in seven.

Any man in any branch of the Street Railway department becoming incapable through old age or accident of holding his position to have preference in case of a vacancy in the position of flagman.

Monthly employees after one year, two weeks' annual vacation with pay;

hourly employees after one year, one week. Legal holidays, time and one-half.

Power house.—Wages: Per month, second class engineer, \$185; third class engineer, \$150; water tender, \$145; water tender without certificate, \$137.50. Per hour—firemen, 65 cents; head ash hands, 62½ cents; all other ash handlers, 60 cents; crane engineers, to October 1, 85 cents, thereafter, 90 cents; elevator attendants, 65 cents; all other coal handlers and general help, 60 cents; boiler cleaners, 67½ cents; tube blower, 62½ cents.

Pumping Station.—Wages: Per month—second class engineer, \$170; relief engineer, second class, \$170; third class, \$145; assistant engineers, \$145; filter operators, \$135. Per hour—general help; on filters, 60 cents; in engine room, 62½ cents.

Six days to constitute a week's work, time and one-half to be paid for seventh day. Holiday rate, time and one-half.

Monthly employees, after one year's service, two weeks' vacation with pay per year; hourly employees, one week. Lay-off and grievance regulations as in other departments.

Public Utilities

EDMONTON, ALTA.—CITY OF EDMONTON AND ELECTRICAL WORKERS' UNION No. 544, TELEPHONE EMPLOYEES, LIGHT AND POWER EMPLOYEES AND STREET RAILWAY ELECTRICAL EMPLOYEES. Agreement in effect from April 1, 1921, to December 31, 1921, and from year to year thereafter or until a new agreement is negotiated.

General Conditions.—Hours of labour: eight per day; four on Saturdays. Overtime until 10 p.m. and Saturday afternoons, time and one-half; thereafter and Sundays and holidays, double time. Monthly employees, after one year, two weeks' vacation per year with pay, hourly employees, one week per year.

Returned soldiers who are employees of the Department and had not resigned previously to enlistment, to have, on returning, full seniority, apprentices ex-

cepted. City not to discriminate against any employee for being or not being a member of any organization. In reduction of staff, those last employed to be first discharged. If more employees are required, the last man laid off to be given preference of re-employment.

Grievances to be investigated by a committee of employees or of union, committee to have right to appeal to superintendent on behalf of employees; if decision is not satisfactory, committee may appeal to City Commissioners and Council and further to a Board of Conciliation.

Telephone Employees.—Credit to be given for previous experience. Night service men to have four nights off per month; apprentices at south exchange on night duty, two nights off per month. A monthly employee working Sunday to be allowed equal time off. No employee to work more than one Sunday in two on this basis. Monthly employees working additional Sundays or holidays, double time in addition to monthly pay.

Wages: Per month—switchman—apprentice, first year, \$85; second year, \$95; third year, \$110; journeyman, first year, \$140; second year, \$160; third year, \$180.

Employees on switch and service work under 18 years of age, \$60 per month for three months; thereafter, \$70 per month until aged 18 years. Employees over 18 years of age, on switch work, to serve six months at \$70 before commencing apprenticeship. Servicemen and rackmen, over 20 years of age, per month, \$110 to \$165; on service work if 18 years of age, \$85; if 19 years, \$95. Inspectors, \$140 to \$165; on P. B. X. work 1st six months, \$165; thereafter, \$175. Night service man, main exchange, \$115. to \$135. Shop mechanics senior, \$175, others, per hour, 50 to 70 cents. Installers and linemen, apprentices, 45 and 55 cents per hour; journeymen, 65 to 85 cents. Cable splicer, per hour, apprentice, 70 to 90 cents; journeymen, \$1.00; helper, 60 cents; foreman, \$1.10. Foremen, per month: branch office sub-foreman, first six

months, \$185; thereafter, \$200. Public Branch Exchange and Exchange Construction Sub-foreman, \$200; wire chief, \$220.

Light, power and street railway electrical employees.—A foreman to have worked at least four years at the trade; an apprentice to have worked at least six months. One apprentice to three journeymen.

Wages: Per hour—linemen, foreman, 96 cents; journeyman, 88 cents; apprentices 60 to 80 cents. Metermen, per month, foreman, \$180; per hour, meter installer, inspector and repairmen, 88 cents. Arcmen, per month, are trimmers, \$115 to \$135; are journeymen, repairman and patrolman, \$170; wiring inspector, \$180. Electricians, per hour—journeymen, 88 cents. Power house operators, per month, central station, \$165; sub-station, \$160; relief operator, \$170.

EDMONTON, ALTA.—CITY OF EDMONTON AND FIRE-FIGHTERS' UNION No. 209. Agreement in effect from April 1, 1921, to December 31, 1921, and from year to year or until a new agreement is negotiated.

Minimum wages: per month—district chiefs, \$165; captains, \$160; lieutenants, \$155; mechanic, \$170; engineer, \$145; driver, \$140; firemen, \$120 to \$140; operators, \$117.50 to \$120.

Work to be under two-platoon system of one day and one night shift. Operators to work 8-hour shifts. City to supply refreshment to men on duty at fires over three hours.

Employees to be on at least two months' probation before being placed on staff as qualified members. Employee to be given equipment at end of probation period. No person under twenty-one years to be employed.

Provisions made for sickness and accident pay, and supplying clothing.

Fourteen days vacation with pay to be granted to each employee after one year's service.

In reduction of staff, last man employed to be first laid off, and last man laid off to be given preference of re-em-

ployment. A man who has been advanced to be reduced in rank in preference to being laid off.

Grievances to be referred to a committee of union which may appeal to chief. If decision is not satisfactory committee may appeal to City Commissioners and Council and further to a Board of Conciliation.

City not to discriminate against any employee for being or not being member of any organization.

EDMONTON, ALTA.—CITY OF EDMONTON AND POLICEMEN'S ASSOCIATION No. 74. Agreement in effect from April 1, 1921, to December 31, 1921, and from year to year or until a new agreement is negotiated.

Wages: Per month—Inspector, \$175; sub-inspector, \$165; captain, \$165; sergeant (detective) \$170; sergeant, \$158;

constables, \$125 to \$145; detective, \$160 accountant, \$165; electrician, \$60; matron, \$100; janitor, \$105.

Members to have fourteen days annual vacation with pay after one year's service.

Hours of work, eight per day; one day off in seven. Overtime, time and one-half.

Uniforms to be furnished yearly to Inspectors, Captains, Sergeants and Constables. Detectives after three months' service to be allowed \$90 per annum for clothing.

No employee to be under twenty-one years of age.

Reduction of staff and settlement of grievances as in the case of fire-fighters.

Members of the Police Department not to participate in any sympathetic strike.

RECENT CHANGES IN WAGES AND HOURS OF LABOUR IN CANADA

THE following is a statement by industrial groups of the more important changes in wages and hours reported to the Department of Labour during the months of July and August:

IRON AND STEEL PRODUCTS.—*Amherst, N. S.* Moulders (17) had their weekly wages reduced from \$36 to \$34.20 in June and July, working 48 hours. Stove moulders (3) working 54 hours, were reduced from \$26.40 to \$23.76 per week; polishers', platers' and labourers' wages were also reduced. *Guelph, Ont.* Moulders and iron workers on July 1, had their wages reduced 10-13 per cent.

RUBBER PRODUCTS. — *Kitchener, Ont.* Wages of about 300 employees were cut in July 5-17 per cent, according to the occupation.

TEXTILE PRODUCTS. — *Amherst, N. S.* Weekly earnings of woollen mill operatives, piece workers, (weavers, spinners, finishers, dyers, carders, packers) were

reduced from \$18-\$20 to \$12-\$15; hours worked, 50 per week. *Guelph, Ont.* Wages of carpet weavers were reduced 12½ per cent in July. *Edmonton, Alta.* Wages of garment workers (168) were reduced on June 15, piece workers, 20 per cent, and time workers 15 per cent. These reductions were removed on July 29.

FOOD, DRINK, TOBACCO. — *Winnipeg, Man.* Weekly wages of packers were reduced on June 1, all working 60 hours: butchers (26) from \$45 to \$40; shippers (14) from \$28 to \$25; packers (14) from \$27 to \$24; department foremen (20) from \$45 to \$40; boners (9) from \$30 to \$27; teamsters (4) from \$28 to \$26; chauffeurs (12) from \$27 to \$22; labourers (100) from \$27 to \$24.

PULP AND PAPER.—The award of the Board of Arbitration appointed in July last on the wage dispute between union paper mill workers and eleven newsprint manufacturing companies in Canada and

the United States decided upon wage reductions of from 10 per cent for skilled workers to 25 per cent for common labour, reductions effective August 22. *Bathurst, N. B.* Wages of pulp mill labourers (31) were reduced on July 25, from 28 cents to 20 cents per hour.

BUILDING AND CONSTRUCTION. — The Federal Department of Railways and Canals has drawn up a new scale of wages in all classes on the Welland Canal Work. The scale, which is, however, at the time of writing, subject to readjustment, provides generally for a 20 per cent decrease from rates in force prior to August 8. The Hydro Electric Commission put into effect on August 1, for employees on Chippawa development work decreases of 10-15 cents per hour. *Hamilton, Ont.* The Board of Conciliation on the wages in the building trades in Hamilton recommended the following changes in wages per hour to be effective from July 19: Carpenters, steam and operating engineers and electrical workers reduced from 85 cents to 75 cents; plasterers reduced from \$1 to 90 cents; sheet metal workers reduced from 90 to 80 cents; painters reduced from 67½ to 62 cents; hod carriers and builders' labourers from 55 to 50 cents, all working 44 hours. *Galt, Ont.* In July one firm reduced the wages per hour of plasterers 5 per cent and of labourers 10 per cent. *Lethbridge, Alta.* On July 31, one firm reduced wages per hour of carpenters from \$1 to 90 cents. *Vancouver, B.C.* In the May issue of the LABOUR GAZETTE

among the reports of wage-changes in building and construction, it was stated that the wages of bricklayers, masons and plasterers at Vancouver had been reduced from \$9.00 per 8-hour day to \$8.00 at the beginning of April, 1921. Later information shows that in the case of bricklayers and masons the general reduction was from \$9.00 per day to \$8.50, effective from May 20, 1921. In the case of plasterers it appears that the change had not been general, that while some employers have been paying \$8.00 since April 1, others have continued to pay \$9.00.

TRANSPORTATION, RAILWAYS.—Reductions of about 12 per cent in rates of wages for employees on Canadian Railways were put into effect tentatively as from July 16. Reductions are similar to those put into effect by the United States Railroad Labour Board, the decision of which was printed in the LABOUR GAZETTE for July.

TRANSPORTATION, TEAMSTERS. — *Edmonton, Alta.* Wages of teamsters, etc., (100) which were \$4-\$5 per day previous to July 16 were reduced on that date 10 per cent.

COMMON LABOUR. — *Charlottetown, P. E. I.* Wages of labourers (125) on the permanent road works were reduced on May 1 from \$2.70 to \$2.25 per 9-hour day. A similar reduction to 75 labourers was put into effect on June 1 by the Charlottetown City Council.

FAIR WAGE CONTRACTS, AUGUST, 1921

DURING August the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to eight fair wage contracts, of which five were awarded by the Department of Public Works, and three by the Department of Railways and Canals. All the contracts contained the usual fair wage clause which provides for the

prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulations for the suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Fixing up and grading grounds at Westminster Psychopathic Hospital, London, Ont. Name of contractor, Webster Construction Co., Ltd., London, Ont. Date of contract, August 9, 1921. Amount of contract, \$8,000 and unit prices for additions and deductions which could be made in contract: Excavation, \$1.50 per cubic yd.; loam, \$2.00 per cubic yd.; sodding, 50 cents per sq. yd.; concrete laid, \$15 per cubic yd.; iron pipes laid, \$3 per lin. ft.; land plowed, harrowed and rolled, \$20 per acre.

Alterations and additions to Post Office fittings, Lindsay, Ont. Name of contractor, The J. T. Schell Co., Alexandria, Ont. Date of contract, August 22, 1921. Amount of contract, \$3,404.

New hot water heating furnace in Public Building, St. Stephen, N.B. Name of contractor, James H. McPartland & Sons, St. John, N. B. Date of contract, August 20, 1921. Amount of contract, \$1,375.

Fittings and alterations to Postal Station "D", Vancouver, B. C. Name of contractor, J. W. Bye, Vancouver, B. C. Date of contract, August 29, 1921. Amount of contract, \$2,525.

Floating wharf, Boswell, B. C. Name of contractor, F. P. Armstrong and Thos. F. Lean, Nelson and Nakusp, B. C. Date of contract, August 23, 1921. Amount of contract, \$7,950.

DEPARTMENT OF RAILWAYS AND CANALS.

Fabrication, erection and completion of a steel water tank of 150,000 gallons capacity in Moncton, N. B., Canadian National Railways. Name of contractor, Dominion Bridge Company, Limited, Lachine, Que. Date of contract, August 12, 1921. Amount of contract, \$11,900.

Construction and completion of Sections 1 and 2 of the Welland Ship Canal. Name of contractor, Johnston P. Porter, Halifax, N. S. Date of contract, August 18, 1921. Amount of contract, schedule rates.

Work incident to construction of substructure of Hamlet Bridge (Sec. 3, Severn Div.) with certain contingent dredging, Trent Canal. Name of contractor, The Randolph McDonald Co., Ltd. Date of contract, September 3, 1921. Amount of contract, schedule rates.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in August for supplies ordered by the Post Office Department subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages and the performance of work under sanitary conditions.

Nature of order.	Amount of order.
Making metal dating stamps and type and other hand stamps and brass crown seals.....	\$ 739.31
Making and repairing rubber stamps, daters, etc.....	251.83
Supplying mail bag fittings.....	7,530.42
Making up and supplying letter carriers' uniforms, etc.....	13,039.09
Repairing letter boxes, etc.....	237.00
Making and supplying stamping ink, pads, etc.....	55.59
Repairing scales.....	217.50
Making and supplying letter carriers' satchels.....	1,876.16

PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1921

THE feature of the movement during August in prices was the slowing up in the continued downward movement which began in May, 1920, and continued with steep decreases each month until April, after which the decreases were less but still substantial. By the end of 1920 there had been a return to approximately pre-war levels in some farm products and raw materials such as grains, wool, hides, and some metals. While manufactured goods were falling in line with such decreases, the naturally slower decline in these was hastened as in the case of raw products by the lack of effective demand increasingly felt since the early part of 1920. Since the middle of 1920, in other lines, particularly some textiles, iron and building materials, the prices have declined less, but have continued to fall though somewhat gradually. In some goods price changes are now marked by the normal slight upward and downward movements from time to time instead of the general upward and, later, downward movements which were experienced during and since the war. This may indicate that in such cases the bottom has been reached at least for the time being. In the United Kingdom and in the United States the general decline since the spring of 1920 appears to have been arrested at least temporarily, the various index numbers showing increases in either July or August. In France an increase appeared for July. There is, therefore, a disposition to consider that the liquidation in prices has been, to a great extent, accomplished, and that with good crops, improved transportation facilities, and better financial conditions there may be better demand in markets which have been weak for over a year.

In retail prices the average cost of a list of twenty-nine staple foods for an average family in sixty cities rose to \$11.44 at the beginning of August as compared with \$10.96 at the beginning of July, \$16.42 in August, 1920, \$14.43

in August, 1919, \$13.41 in August, 1918, \$11.68 in August, 1917, \$8.63 in August, 1916, and \$7.68 in August, 1914. The increase in August of 48c. over July was due to a rise in the average cost of potatoes of 23c. for 2 pecks, in the cost of butter of 22c. for three pounds, with slight increases in milk, eggs, and cheese, all these changes being seasonal but more pronounced on account of the dry and hot summer. In beef, veal, and mutton there were decreases, but pork, bacon, and lard showed slight increases. Flour and oatmeal were fractionally higher. There were slight decreases in evaporated apples, prunes, and sugar. In retail prices of coal there were slight decreases in both anthracite and bituminous as well as in wood and coal oil. In rent there were slight increases in the averages for Quebec and Ontario. The total budget for food, fuel and rent, therefore at \$21.98 totalled more than in July at \$21.53, but less than in August, 1920, at \$26.60, or in August, 1919, at \$22.86, more than in August, 1918, at \$21.20, and 52 per cent higher than in 1914 at \$14.46. The decreases in the cost of foods since June, 1920, to levels lower than have been experienced for foods since 1916, have, therefore, been practically offset by increases in fuel and rent. Incomplete returns as to retail prices of clothing, etc., indicate that the cost of all items for an average family in the cities in July and August was still approximately 60 per cent above 1913 levels.

In wholesale prices the Departmental index number for August showed little change at 236.4 as compared with 238.6 for July, 330.2 for August, 1920, 301.1 for August, 1919, 284.3 for August, 1918, and 136.3 for August, 1914. Among the principal changes for the month was a substantial increase in prices of fodder, but there were fluctuations in grain according to varieties and markets. Cattle and beef were substantially lower but hogs and hog products continued to advance from the lower levels reached in

May and June. Sheep, mutton, and lamb were down but fowl and turkeys were up. Butter and eggs also showed substantial increases. Dry and salt fish were considerably lower, but fresh whitefish advanced. In Fruits and Vegetables, prices for fresh native fruits were somewhat higher than in August last year. Imported fruits were about the same as a year ago, but dried fruits and canned vegetables were lower. The steep rise in potatoes brought the average for fresh vegetables slightly above the level of a year ago when prices were beginning to fall steeply. In textiles, cotton, jute, and flax recovered slightly for the month, but all lines were about 40 per cent lower than a year ago. Hides, leather, and boots continued to decline. In metals, iron goods showed little change but there were slight decreases among the other metals. In fuel and lighting, gasoline and coal oil were down. In building materials, lumber continued to decline and there were also further declines in paints and miscellaneous materials. Some lines of wooden furniture were down steeply. In drugs and chemicals decreases in glycerine and copperas were offset by increases in bleaching powder and caustic soda. In raw furs, mink skins again advanced.

The table of retail prices and rentals shows the prices at the beginning of August of over one hundred staple food-stuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada having a population of 10,000 or over. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates

for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figures being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts exclusively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, those being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times

when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups

and sub-groups for the previous month and for the corresponding months back to 1913.

Retail Prices

Fresh meats averaged lower from 1c. to 1½c. per pound, the decreases being fairly uniform throughout the Dominion. Fresh pork was higher in Ontario and British Columbia but lower in the other provinces. Salt pork was higher in all the provinces except Nova Scotia and British Columbia. Breakfast bacon was upward except in the province of Quebec. Boiled ham was little changed. In fish fresh halibut was higher in Nova Scotia and Quebec but was practically unchanged in the other provinces. Lard averaged considerably higher in Nova Scotia and Ontario, and there were lesser increases in the other provinces. Eggs averaged higher in all the provinces. Milk was higher in Amherst, St. John, St. Hyacinthe, and Belleville, but declined at Sherbrooke, London and Nanaimo. There was a general advance in butter of from 3c. to 4c. per pound throughout the Dominion. Cheese was slightly higher. Bread was lower at Sherbrooke, Belleville, Toronto, Vancouver, and Victoria. Soda biscuits averaged slightly lower. Flour showed little change. Rice and tapioca again were slightly lower. Potatoes were higher in price owing to the unusually hot and dry weather. In some cities old potatoes were still on the market at low levels. Dried fruits averaged slightly lower. Jams and canned fruits showed some tendency downward. Corn syrup and honey were lower. Sugar also declined. Cream of tartar was lower in several of the cities.

Anthracite coal was higher at St. John's and Hull, Quebec, and in Ottawa, Brantford and Stratford, Ontario, but was lower in Port Arthur, Ontario, and Winnipeg, Manitoba. Bituminous coal was down at Three Rivers, P.Q., Port Arthur, Ont., Winnipeg, Man., Prince Albert, Sask., Edmonton, Alta., and Fernie and Trail, B.C., but was higher at Sault Ste. Marie, Ont. and Calgary,

(*) Preliminary figures. (†) Six commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.
‡ Revised. (a) Number of commodities varies from month to month.

\$1.65-\$1.75. Canned tomatoes eased off from \$1.65-\$1.75 per dozen to \$1.65.

MISCELLANEOUS FOODS.—Rolled oats advanced from \$3.15-\$3.30 per bag to \$3.50. Winter wheat flour fell from \$7.30 per barrel to \$6.25-\$6.35. Spring wheat flour was steady. Sugar was 50c. per hundred pounds higher at \$9.14. Glucose was up slightly. Molasses advanced from 64c. per gallon to 73c. Honey was down from 19c. to 20c. per 64c. per gallon to 73c. Honey was down from 19c.-20c. per pound to 14c.-15c. Maple sugar was down from 15c.-20c per pound to 15c.-17c.

TEXTILES.—Raw cotton, upland midlings, advanced from \$12.75 per hundred pounds to \$13.05. Raw silk, Japan, at New York was down from \$5.90-\$6.00 per pound to \$5.75-\$5.80. Jute at Montreal had fallen to 8.66c. per pound in June, but rose to 8.91c. in August. Flax fibre had fallen to 25c.-40c. but rose to 24c.-45c. Flax sewing twine fell from 64c. per pound to 62.

HIDES, LEATHER, BOOTS AND SHOES.—Calf skins fell from 15c. per pound to 13c. Harness leather was down from 51c. per pound to 49c. Boots continued to fall in most lines, box calf, grain and dongola kid lines being 10 per cent to 20 per cent lower than in the spring.

METALS AND IMPLEMENTS.—Iron bar eased off from \$3.75 per hundred to \$3.50-\$3.75. Wrought iron scrap fell from \$13.50 per ton to \$12.00. Copper was down from 17½c. to 17c. per lb.

Lead fell from 7c. per pound to 6½c. Bar silver was up from 60½c. per ounce to 61½c. Solder fell from 26c. per pound to 24c. and tin from 37c. to 35c.

FUEL AND LIGHTING.—Coal, anthracite and bituminous, was steady. Gasoline fell from 33c. per gallon to 31c. and coal oil from 18½c. per gallon to 17½c.

BUILDING MATERIALS.—Pine shipping culls, sidings, at Ottawa, were down to \$55.00 per M. Lath was down to \$9.50 per M. Hemlock fell to \$25.00 per M and spruce to \$35.00. Bricks at Toronto were down from \$23.00 per M to \$21.00. Cement fell from \$4.47 per barrel to \$4.20 at Toronto. Building paper, plain and tarred, fell 10c. per roll to \$1.35 and \$1.45 respectively. Sash weights were down to \$3.00 per hundred. Copper wire at New York fell to 13½c.-14c. per pound. Linseed oil was down from 93c. per gallon to 90c. Benzine fell from 35c. per gallon to 31c. Shellac eased off.

HOUSE FURNISHINGS.—Kitchen tables were down 20 per cent and hard wood tables and bedroom suites 10 per cent.

DRUGS AND CHEMICALS.—Bleaching powder rose from 4c. to 4¼c. per pound. Caustic soda rose from 6c. per pound to 6½c. Copperas fell from \$1.85 per hundred to \$1.80. Glycerine was down from 30c. to 28c. per lb.

MISCELLANEOUS.—In raw furs, mink skins advanced \$1.00 each to \$10.00-\$15.00. Laundry soap was lower at \$4.00 to \$7.10 per box.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE accompanying tables and the following notes give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources. The authorities for the wholesale price index numbers are named in each case.

United Kingdom

The *Statist* (Sauerbeck) index number of wholesale prices for July 30 showed a rise of 2.4 points from the previous month, reaching 158.2, but at the end of August had fallen again to 155.5, being then slightly below the June level. Foodstuffs in general showed a slight decline during July and a rise in August. Vegetable foods declined in both months.

The *Economist* index number of wholesale prices for the end of August records a check to the downward movement which it had indicated during the preceding months, the increase being, however, merely fractional. There was considerable irregularity in the movements of cereals and meats in comparison with the end of July. Raw cotton, both American and Egyptian, was higher than for the preceding month, but cotton yarn and cloth were lower. Iron and steel prices showed no change.

The *Times* index number of wholesale prices recorded almost the same figure for the end of July as for June and showed a slight decrease during August. Food values showed a net increase during the two months. Coal prices declined about 30 per cent during August, owing to the

demand being insufficient to absorb the output.

The level of retail prices of food, according to the figures published in the *British Labour Gazette*, was, as compared with the level of July, 1914, 120 per cent higher at the beginning of July, 1921, and 126 per cent higher at the beginning of August, the increase during the month being largely due to higher prices for milk, butter and eggs, mainly due to drouth and seasonal causes. Bacon and cheese were also dearer on the average, while meat, sugar and potatoes were cheaper. Between July, 1914, and August, 1921, the average increase in rents was calculated at between 50 and 55 per cent, in clothing about 180 per cent, and in fuel and lighting about 150 per cent. The cost of living index number combining foods and all these other items in accordance with their relative importance in pre-war working-class family expenditure, was 222 for August 2, as compared with 219 for July 1.

Germany

The cost of living index number published by the Federal Statistical office showed in June, 1921, a slight rise as compared with the previous month for the city of Berlin, and a larger rise on the average throughout the whole country. This was an interruption of the decline which had been going on steadily since January of this year. Amongst foods, the chief increases over the preceding month were in the prices of eggs, potatoes (without considering the new potatoes), other vegetables and fish. The chief drop was in butter.

a Average for year. b Quarter beginning in specified month. c 230 commodities, 1890-1909: 272, 1910-1914: 271, 1915-1921.

As compared with pre-war figures, cost of living for June, 1921, showed an increase of nearly 800 per cent while the food budget showed an increase of 1075 per cent.

Italy

Taking prices for the first six months of 1914, as the base, that is, equal to 100 per cent, the index number of cost of living for Turin was about 430 for June, 1921, as compared with 472 for March, 1921, when the highest point was reached. The June level approximated that of November, 1920, when the retail prices were still rising.

Switzerland

An index number of wholesale prices, published by Dr. Lorenz in the *Neue Zürcher Zeitung*, was started in January, 1921, with the year 1914 as base. The figure for April 1921, was 209.5, thus indicating that prices were slightly over twice the pre-war level. The figure for January, 1921, was 234.3 and for January, 1920, 342.7.

India

The report of the Labour office at Bombay for June, 1921, estimated that the cost of living index number for the working classes in Bombay was 73 per cent above that of July, 1914, as compared with 67 per cent in May last. The number for June showed, however, a decrease of 10 per cent as compared with October 1920, when the highest point was reached.

United States

The index number of wholesale prices of the Federal Reserve Board was 141 in July, as compared with 139 in June, thus showing a slight advance for the first time since the downward movement commenced in May 1920. Raw materials as a whole were relatively stable. Producers' goods continued to decline in price because of reductions in metal products, which are of particular importance in this group. Increases occurred in prices of consumers' goods.

Bradstreet's index number of wholesale prices, which had shown a slight rise, after June 1, moved further upward during July, the figure at August 1, indicating an increase of 3 per cent over July 1, and a net gain of 4.1 per cent from the lower point at June 1. The bulk of this gain was in food products, but there was also a rise in textiles, especially cotton goods, during July. The index number for September 1, was \$11.0868, as compared with \$11.0576 for August 1, thus indicating general stability of wholesale prices during August. Decreases, mostly very small, in a number of commodities were offset by the rise in raw cotton, and an advance in cotton cloth, together with fractional gains in other groups.

Dun's index number for September 1, was \$162.619, showing a slight recession from the August figure, \$163.677.

The index number of wholesale prices calculated by the Bureau of Labour Statistics of the United States advanced from 148 in July to 152 in August, an increase of about $2\frac{3}{4}$ per cent. Food articles in the aggregate were nearly $13\frac{1}{2}$ per cent higher. Farm products, including many food items in the raw state, were $2\frac{1}{2}$ per cent higher. In all other groups, except cloths and clothing, decreases of from 1 to 4 per cent took place. Cloths and clothing showed no change in the general price level.

The Bureau's index number of retail prices for August was 155 as compared with 148 in July, an increase of 4.3 per cent, thus showing a continuance of the upward movement revealed for the first time by the July figures. In all, 27 articles out of 43 increased in price during the month. Potatoes rose 24 per cent; strictly fresh eggs 13 per cent; pork chops, cheese and cabbage, 11 per cent; butter, 10 per cent; lard 8 per cent; sugar 6 per cent; canned tomatoes 5 per cent. The prices of ten articles showed a decline, but no large decreases were recorded. Bananas fell 5 per cent; leg of lamb 3 per cent; canned salmon, flour, onions and raisins, 2 per cent.

MIGRATION AND SETTLEMENT DURING THE SECOND QUARTER OF 1921

IMMIGRATION.—The following statements compiled from information furnished by the Department of Immigration and Colonization give details as to the total immigration into Canada during the second quarter of 1921. For purposes of comparison the figures for the previous quarter and for the corresponding quarter in 1920 are also given:

STATEMENT OF IMMIGRATION TO CANADA DURING THE SECOND QUARTER OF 1921.

	British	From U.S.A.	Other countries	Totals
1921				
April.....	8,476	5,035	1,541	15,052

Second quarter, 1920.....	28,487	16,397	4,358	49,242

The table on page 1212 gives the nationality, sex and destination of all immigrants entering Canada during the second quarter of 1921.

LANDS PATENTED.—According to information supplied by the Department of the Interior with respect to letters patent covering Dominion Lands in Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory, the number of patents issued during the second quarter of 1921 was 4,094 and the number of acres was 647,894, as compared with 5,181 patents and 800,594 acres in the first quarter of 1920, and 4,574 patents and 702,174 acres in the corresponding quarter of 1920.

HOMESTEAD ENTRIES.—During the second quarter of 1921, there were 2,868 homestead entries recorded in the Provinces of Manitoba, Saskat-

chewan, Alberta and British Columbia as compared with 769 for the first quarter of 1921, and 1,612 for the corresponding quarter of 1920. The statement opposite shows the number and nationality of those who took up homesteads in the various provinces during the second quarter of 1921.

RECENT LEGAL DECISIONS AFFECTING LABOUR

THE legal decision summarized below is a judgment of the Judicial Committee of the Privy Council with reference to damages claimed for the death

of an employee on a railway line in Quebec operated jointly by two companies.*

Where a workman is under two employers, the one having control at time of accident is liable for negligence

A locomotive fireman employed by the Grand Trunk Railway Company was killed in a collision at Montreal on the Grand Trunk line on February 2, 1915. The engineer of the other engine whose negligence was the cause of the collision, was an employee of the Central Vermont Railway Company, which had an agreement with the former company for the common use of their lines between Montreal and St. Albans, Vermont. The widow received compensation from the Grand Trunk Railway Company under the Quebec Workmen's Compensation Act. As she was entitled to do under Article 7334 of the Quebec Civil Code, she also brought action against the Central Vermont Railway Company for damages on account of negligence. The Company denied liability on the ground that their engineer who was the cause of the accident was at the time in the employment of and subject to the orders of the Grand Trunk Railway Company. The trial judge found for the plaintiff. On appeal by the defendant company to the Court of King's Bench this decision was affirmed, one judge dissenting. On a further appeal by the company the Supreme Court of Canada unanimously agreed with the dissenting judge and dismissed the action. An appeal was then taken by the widow to the judicial committee of the Privy Council.

In the judgment of the Privy Council, the clauses in the agreement between the two companies which bore on the case were quoted. These provided for a joint service between Montreal and St. Albans each party to furnish its mileage proportion of engines, cabooses and train crews, and "that each party hereto shall pay the train and engine men employed in the joint service for the service performed by them on its own line, and neither of the parties hereto shall be held responsible to the other for the actions of such joint employees while upon the line of railway of the other party hereto."

There was no difference of opinion in the lower courts as to the facts of the case, and with the exception of the trial judge, there was a general agreement as to the law to be applied. This was expressed in the judgment of the Court of King's Bench as follows: "He [the engineer at fault] was in the general service of the Central Vermont Railway Company, but it is well established that the master, in whose general service a man is, is not responsible for the tortious act of the man if the control of the master has been, for the time being, displaced by the power of control of another master into whose temporary service the man has passed by being lent (even gratuitously) or sub-contracted."

*The judgment of the Court of King's Bench in this case appeared in the LABOUR GAZETTE, July, 1918.

The difference of opinion was as to which of the companies was the *patron momentane* (the employer for the time being). It was held by the Court of the King's Bench that "the Central Vermont Company retained a measure of control of F— [the engineer] instead of having put him completely under the orders of the other Company". Their Lordships, however, agreed with the view taken unanimously by the judges of the Supreme Court, that the engineer was in the temporary employ of the

Grand Trunk Railway Company at the time of the accident, as this accident was due to a disregard of Grand Trunk signals, which at that moment he was bound to obey. The real test as to who was the employer is "control" and at the moment of the accident the control of the engineer was in the Grand Trunk. Their Lordships therefore advised that the appeal should be dismissed with costs. (*Quebec—Bain vs. Central Vermont Railway.*)

Rates of Wages and Hours of Labour in Canada September, 1920, and June, 1921

THE accompanying tables show for September, 1920, and June, 1921, rates of wages and hours of labour in twenty-seven cities in Canada and for twenty-seven of the more important trades or classes of labour. So far as possible the information for 1921 is of the same nature and from the same sources in each instance as that for 1920, so that the figures illustrate the changes in wages and hours which have occurred in the classes of labour shown for the cities included. Where, occasionally, reliable information was not available, rates have been omitted. In some cases a range of rates or hours is given with a view to show the condition under which an appreciable number of men were reported to be working, even though a strike or lockout might be in progress.

In some such cases arrangements had been made between the employer and employees concerned that the rates of pay were to be adjusted when the result of the strike was known. In all cases where an appreciable number of the men engaged in the trade were on strike in a dispute as to wages or hours it is indicated in the footnote.

In some instances, the data available are unfortunately somewhat meagre, but it has been considered advisable to include such data where the 1920 rates and hours from the same source appeared to be fairly typical, since the comparison of the new figures with the old would probably afford an approximately correct idea of the tendency of wages to rise or fall.

Where rates and hours for June were not available, those prevailing in May (or March in a few cases) have been given. There are also a number of instances where new agreements signed in July have been forwarded to the Department; rates from these agreements have been included when the information available for June appeared less satisfactory or indicated unsettled wage conditions, or where the July agreement was retroactive to cover June.

The sources of information from which the accompanying tables have been compiled are similar to those used for the bulletin on "Wages and Hours of Labour in Canada 1901-1920" issued as a supplement to the March issue of the LABOUR GAZETTE. While the present tables are published mainly for the purpose of illustrating changes in rates of wages and hours of labour between 1920 and 1921 in the more important trades, they also serve to bring up to June, 1921, the record back to 1901 for fifteen classes of labour in thirteen cities published in the bulletin above mentioned. It will be noted, however, that in the present case no figures for factory labour or lumbering are included, as the records of changes during the past year in occupations under these headings are not yet complete enough for publication. The classes of labour on steam railways given in the March bulletin are likewise omitted, as no changes were made in the rates then shown for 1920 until July 12, 1921, when a tentative reduction of 12½ per cent was effected, pending further negotiations.

The first group of the tables presented herewith comprises eight building trades: Bricklayers, Carpenters, Electrical Workers, Painters, Plumbers, Roof-

ers, Stonecutters, and Builders' Labourers. The sources of information for this group were returns from employers, trade unions, and Departmental officers and correspondents, as well as copies of signed agreements and reports on the settlement of strikes.

The second group consists of eight metal trades: Automobile Mechanics, Blacksmiths, Boilermakers, Machinists, Millwrights, Iron Moulders, Pattern-makers, and Sheet Metal Workers. The rates and hours of railway shop employees are excluded. The sources are similar to those used for the building trades.

The third group includes only two classes in the Printing Trades, namely, Newspaper Hand Compositors on day work, and Job Office Cylinder Pressmen. The effort to bring the 1920 rates up to date for these classes has been attended with some difficulty, owing to the unsettled conditions in the printing trades at many points. The information obtained is chiefly from returns of trade unions and Departmental correspondents. Returns were also received from some employers.

Conductors and Motormen and Electric Linemen are presented in the fourth group, representing electric street railways and power employees. The rates for conductors and motormen vary in nearly all instances according to the term of service, but the maximum rates have been selected as affecting the largest number of men.

The miscellaneous group is made up of Chauffeurs, Stationary Engineers, Stationary Firemen, Common Labour, Teamsters, Truckmen (motor) and Watchmen. The data regarding most of these classes are taken chiefly from employers' returns, but much information is also taken from returns of trade unions and Departmental officers and correspondents.

The classes of labour for which rates are here published are in the main skilled trades, and practically all, even the unskilled, are in most cities organized to a great extent in trade or labour unions. The statistics given in this bulletin therefore show wage rates and hours of labour in a number of organized occupations in certain cities at the two dates under review. They do not, however, indicate the changes in wages or hours in organized or unorganized classes of labour in rural districts or outlying parts, such as farming, mining, lumbering, fishing, etc. The March bulletin, by sample rates of wages, showed to some extent the trend of wages for common labour in factories, for a number of miscellaneous factory trades and for the lumbering industry. The index numbers published in the March bulletin indicated that rates of wages for these classes increased from 1913 to 1920 in somewhat greater proportion than for occupations in the building, metal, printing trades, etc. The information so far received of wage changes in factories and in the lumbering industry since September 1920 indicates in general greater proportional reductions than for the classes listed in the accompanying tables.

THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE GIDEON D. ROBERTSON.
DEPUTY MINISTER—F. A. ACLAND.

Volume 21

OCTOBER, 1921

Number 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

In addition to the regular monthly articles this issue of the LABOUR GAZETTE contains articles on the further action that is being taken in Canada, Great Britain and the United States towards the alleviation of the unemployment situation; also articles on the International Co-operative Alliance, and on "Labour Banks." It also contains summarised accounts of recent conventions of the Canadian Federation of Labour, the National and Catholic Unions, and other labour organizations.

At the beginning of September unemployment among trade union members was 8.71 as compared with 9.10 per cent at the beginning of August and 2.37 per cent at the beginning of September, 1920. Considerable short time was again indicated by many of the unions reporting. According to returns received from some 5,000 firms, the employment situation in September continued to show some improvement, but conditions were considerably less favourable than during the same month in 1920.

The cost of the weekly family budget of staple foods rose to \$11.82 at the beginning of September, as compared with \$11.44 in August; \$15.95 in September, 1920; and \$7.83 in September, 1914. The index number of wholesale prices for September was 232.7 as com-

pared with 236.4 for August, 326.6 for September, 1920, and 141.3 for September, 1914.

The time loss due to industrial disputes during September was less than during August but greater than during September, 1920. There were in existence during the month 22 strikes involving about 3,535 workpeople and resulting in a time loss of 69,100 working days. At the end of the month there were on record 15 strikes involving about 2,429 workpeople.

Proceedings under the Industrial Disputes Investigation Act

During the month of September the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between

(1) the Montreal Tramways Company and certain of its employees, being members of Division No. 790, Amalgamated Association of Street and Electric Railway Employees of America, and (2) the Western Stevedore Company, Fort William, Ont., and certain of its employees, being members of Twin City Lodge No. 605, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Two applications were received for the establishment of Boards, and further appointments were made in connection

with an application which had been received during the previous month.

Jottings

The Canadian representatives at the third International Labour Conference (League of Nations) which meets at Geneva on October 27, will be as follows: Messrs. Gerald H. Brown, Assistant Deputy Minister Department of Labour, and J. Obed Smith, Superintendent of Emigration for Canada at London, Eng., representing the Government; Mr. S. R. Parsons, Toronto, former president of the Canadian Manufacturers' Association, representing the employers; and Mr. Tom Moore, Ottawa, president of the Trades and Labour Congress, representing labour. The Hon. Antonin Galigneault, Minister of Labour for Quebec, has been appointed adviser to the government delegates on behalf of the province of Quebec, the Hon. W. R. Rollo, Minister of Labour for Ontario on behalf of that province, and the Hon. Thomas H. Johnson, K.C., Attorney General of Manitoba on behalf of the province of Manitoba; Mr. E. Blake Robertson, Ottawa, as adviser to the employers' delegate; and Mr. Arthur Martel, Montreal, vice-president of the Trades and Labour Congress of Canada, as adviser to the labour delegate.

At the last session of the Quebec legislature an Act was passed authorizing the provincial government to take out group insurance on the lives of its employees. Provision was made for the carrying out of this Act by order-in-council of August 4, and the superintendent of insurance has been instructed to draw up contracts which will distribute the insurance among various companies.

The *Alberta Gazette* of September 15 announces the cancellation as from September 1, 1921, of orders-in-council 1001-21 and 1431-21, which appointed an advisory committee under the Factories Act to investigate and report concerning minimum wages and hours of labour for women and young persons in

establishments covered by the Act. The committee was composed as follows: Mr. J. N. McLeod of Calgary, chairman; Messrs. H. M. Martin of Edmonton and T. A. Gaetz of Red Deer, representing employers, and Messrs. Robert McCreath, Edmonton, and Walter Smitten of Calgary, representing employees.

The Master Plumbers' Association of Montreal have adopted a production schedule specifying the amount of work of different kinds that should be done in a day of nine hours, also the number of hours that other classes of work should take to complete. In the foreword to the schedule, it is stated that there was no intention that the schedule should be rigid in its application nor that payment by piece work should be forthwith inaugurated in the plumbing and steamfitting trades, but that the adoption of the schedule would be fully justified if it enabled the employer to estimate more closely on his contracts and to pay his mechanics according to their experience and efficiency.

Arrangements have been made for the holding of lecture courses of the Workers' Educational Association in Ontario at Toronto and Ottawa under the auspices of the Toronto University; and at London under the auspices of the Western University; and in Alberta at Calgary, Edmonton, Lethbridge, Medicine Hat, Blairmore and Drumheller, under the auspices of the Alberta University. History, economics, and scientific subjects will be dealt with by the lecturers at most of these points. At Toronto the curriculum will include economics, international finance, political philosophy, English literature and composition, psychology and logic, British history, public speaking, trade union law and Marxian economics; and consideration is being given to the question of having special classes for women workers.

In the May issue of the *LABOUR GAZETTE* reference was made to an essay contest of the Ontario Safety League for

school children (a) of 12 years and under, and (b) of 13 years and over, on "How Children May Avoid Motor Accidents." The prizes donated by the Ontario Motor League were recently awarded, Mary V. Nolan of Locust Hill, Ont., receiving the first prize of \$10 in Class (a), and Muriel McKenzie of Cameron Avenue School, Windsor, Ont., the first prize of \$10 in Class (b).

At the recent convention of the Stereotypers' and Electrotypers' Union of North America (see LABOUR GAZETTE, September, page 1153) it was decided to refer to a referendum vote a resolution calling for an assessment of 2 per cent to be levied on the weekly earnings of all members to finance the lockout of members involved in the 44-hour week campaign. The referendum has resulted in 4,300 votes for and 887 against the resolution. Out of 142 locals, 25 unanimously approved the resolution, 23 locals registered their vote against it, and 21 did not vote.

As an outcome of representations made by business organizations, the British Ministry of Labour has appointed a committee under the chairmanship of Lord Cave to inquire into the working of the Trade Boards. These Boards were originally formed in 1909 for the purpose of establishing minimum wages in industries where wages were exceptionally low. In 1918 their scope was enlarged on the recommendations of the Whitley Committee to embrace any trade in which on account of defective organization, wages are unduly low, or in which there is reason to expect undue fall in wages. The Boards are composed of an equal number of employers and workpeople, and independent members appointed by the Ministry of Labour. Organized labour seeks to retain the Trade Boards.

The Central States Co-operative Wholesale Society, with headquarters at East St. Louis, Ill., is opening a school for the training of managers for co-operative stores. The course of instruc-

tion will consist of lectures, text-book work, and practical experience in the conduct of the business. Young men of from 25 to 30 years of age (who are students of labour matters) are asked to apply. The school will pay the students sufficient to keep them in funds, and positions will be open to them when they have completed their course of study.

The president of the Republic of Brazil has ratified the Bill passed by the National Congress for the institution of a National Labour Department.

Labour objection to Calgary municipal tax Last May the City Council of Calgary passed a by-law imposing a "minimum service" tax of \$5 payable by single persons earning up to \$1,000 a year and married persons up to \$2,000, and \$10 payable by all earning over those amounts, with exemptions for returned soldiers up to \$1,000 and \$2,000 for the single and married respectively. The Calgary Trades and Labour Council objected to the tax and circulated a petition calling for a plebiscite on the by-law on the ground that it indicated a complete departure from the system of taxation previously in vogue. The plebiscite which was subsequently held resulted in favour of the new tax. The city proceeded to collect the tax of employees from their employers, requiring the latter to deduct the amounts due from their employees' wages. The Trades and Labour Council has objected to this method of collecting the tax and is considering the advisability of taking legal action to test the validity of the by-law and the method adopted for collecting the tax.

Report of Nova Scotia Commission on Mothers' Allowances The report of the Commission appointed in December, 1919, by the government of Nova Scotia to inquire into the practicability of a scheme for mothers' allowances has recently been published. The Commission unanimously recommends the passing of an

act to provide for the payment of allowances in certain cases to mothers of children, such act to be entitled "Mothers' Allowances Act." The Commission further recommends that the scheme should be province-wide, and that the expense should be a direct tax on the whole province, the Act to be administered by a minister of the Crown, assisted by an advisory commission with local advisory committees. The following cases are cited by the Commission as worthy of consideration for state aid: (1) A widow with two or more children. In cases where there is only one child the Commission considers that, as a general rule, the mother should be able to support it without public aid. (2) The mother of children whose father is suffering from an incurable disease, or who is totally disabled. (3) Where the breadwinner is the inmate of an insane asylum; the Commission, however, does not recommend assistance where the husband is incarcerated in prison, stating that in such cases prison labour, with remuneration for wife and dependants, would seem the most reasonable remedy. (4) Deserted families; in this case the Commission considers that state aid should not be given until the necessary legislation is passed making it compulsory for an absent father to carry out his obligations to his family. (5) Unmarried mothers; in such cases the Commission considers that before public aid should be given, the present law with respect to children of unmarried mothers should be replaced by one making it the duty of the province to establish the paternity of every child and to fix the responsibility of financial support. The Commission considers that it would be a wise policy to begin with the really deserving of the first group, viz., widows with two or more dependent children, and after the necessary machinery was put in operation for carrying out such a scheme, it would then be comparatively easy to include the most worthy of the other groups. As conservation of child life is given as the basis of this proposed Mothers' Allowance legislation, it is especially recommended that in extending the applic-

ation of such legislation beyond the initial group of widowed mothers with more than one child, preference be given those in any of the other groups where there is a child or children under five years of age. This recommendation, it is stated, would bring the proposed legislation into line with the accepted conclusions of our public health authorities in regard to reduction of infant mortality.

Threatened coal shortage in western provinces

An analysis of the coal situation in the three western provinces, made by Mr. F. E. Harrison, of Calgary, an official of the Federal Department of Labour, indicates the possibility of a serious shortage in the available supply of coal during the coming winter. The requirements for domestic coal in Manitoba, Saskatchewan and Alberta are estimated at approximately three million tons in the year. The amount of coal actually sold up to October 1, however, was only about 1,700,000 tons, due to the fact that dealers and consumers have been withholding their orders in the hope of a general reduction in the price of coal. It is therefore necessary, if a shortage is to be avoided, that some 1,500,000 tons of coal be produced at the mines and distributed to the consumer during the remainder of the present year. This can only be accomplished, it is stated, if the record production of last year is maintained during the next three months, and if, moreover, the railways are in a position to supply many more cars than have been available hitherto. Further delay, it is feared, may arise from the fact that much of the coal produced during the past season still lies in storage, and would have to be moved before further supplies could be laid in. It is claimed by the operators that, apart from the usual seasonal reduction in summer, no permanent reduction in the price of coal can be effected before the expiration of the present wage agreement on March 31, 1922.

Adjustments of wages to cost of living

The British *Labour Gazette*, August, 1921, shows that in Great Britain there is an increasing adoption of wage scales based on the cost of living. In December, 1920, the number of workers known to be covered by agreements for regulating wages automatically in accordance with the variations of the cost of living was about one and a half millions. Since December many similar agreements have been entered into, and it is estimated that the number now covered by such arrangements is about two and three-quarter millions. In all cases but three, so far as is known, the cost of living is measured by the Ministry of Labour index number showing the increase over pre-war level in the retail prices of all the items included in the Ministry of Labour statistics. In two cases the index number of goods prices only is used, and in the other the index number of all items in combination with other figures. In most cases the changes in rates of wages correspond with a certain variation in cost of living at whatever point in the scale such variation occurs, but in a few instances the adjustments in rates of wages are less when the index number is below than when it is above a certain level.

British Labour Exchanges and domestic servants

On account of complaints that officials of the British employment exchanges were in certain cases discouraging young women from entering domestic service, the British Minister of Labour has issued the following order defining the duties of these officials: "(1) An allegation has been made to the Minister that employment exchange officials discourage unemployed young women from offering themselves for vacancies in resident domestic service unless the terms of the situation satisfy the conditions outlined by the Juvenile Advisory Committees, who are engaged in the voluntary work of offering advice and assistance to young people under 18 years of age seeking work. (2) It has indeed been further alleged that employ-

ment exchange officials recommend young women registered as unemployed to come upon the Unemployed Insurance Fund for benefit—in cases where, by previous occupation in an insurable industry, they are eligible for the same—rather than accept situations which do not conform to the conditions so outlined. (3) The Minister is, of course, aware that the conditions in question are outlined as advice and assistance exclusively to young people under 18, and that since a proportion of these only are insured, the allegation is manifestly of very doubtful reliability. (4) He is also aware that the large number of vacancies in domestic service which have, in recent months, been actually filled by the employment exchanges, is substantial evidence of successful endeavour on the part of the employment exchange officials in a direction the direct reverse of that indicated in the complaint made to him. (5) Nevertheless, the Minister considers it desirable to remind all those responsible for administering the Unemployment Insurance Acts—in regard to domestic service as to all other forms of occupation—that the function of the exchange official under the Act is confined to deciding whether or not the applicant for unemployment benefit has unreasonably refused an offer of suitable employment. (6) If the employment exchange official is in any doubt as to whether the refusal to take the situation is justified in the circumstances of the case, he should simply suspend benefit and at once refer the matter to the judicial decision of the Chief Insurance Officer, subject to further reference, if necessary, to the Court of Referees and the Umpire."

Workers' Councils in United States postal service

With the approval of the Postmaster General of the United States, national and local councils are being organized among postal employees for the purpose of considering matters affecting working conditions, health and general welfare of employees in post offices, mail trains, steamships and other divisions of the United States postal service. It is

planned to have the national council composed of representatives elected by the employees themselves. In order that the council's work may begin immediately it has been decided that the first council shall be made up of the presidents and the secretaries of the postal trade union organizations and representatives of the unorganized employees, until a method of selection by the employees of the members of the council is developed. This council will meet monthly in Washington with the welfare director or other representatives of the welfare department. It is proposed to form in each city of sufficient size a local council to be composed of the postmaster or a supervisory official appointed by him, and representatives of the letter carriers, postal clerks, and other employee groups. These local councils will meet periodically to discuss matters of local interest. A council among the employees of the Post Office Department at Washington was organized in the latter part of July. It is proposed to appoint smaller committees from the permanent councils to study the questions of sanitation, light, rest rooms, first aid (medical and nurses'), recreation, entertainments, etc. These committees will aid the councils in making suggestions or recommendations.

A "building guild" in the United States

The organized carpenters of Ann Arbor, Michigan, recently incorporated under the name of the Ann Arbor Union Builders' Corporation for the purpose of undertaking building operations and thus entering into active competition with the local building contractors, says *The Survey* of New York (September 16, 1921). A capital of \$20,000 has been raised by the issuance of stock to members. Bids on construction are to be made on actual cost. The union builders are not a profit-making concern, and ask only union wages for their men. The constitution provides that the corporation may, upon a two-thirds majority vote at a special meeting called for the purpose, join in co-operation with any other co-operative organization. The corporation may not pay returns upon

its stock or give its members any other earnings or advantages except by the payment of 6 per cent cumulative dividends to the stockholder, and wages or salaries to its employees: "The last article which relates to earnings," says *The Survey*, "is said to be unique in the history of corporations."

Exemptions from 8-hour day law in Belgium

With reference to the 8-Hour Day Act, which came into force in Belgium on October 1, the following procedure was adopted respecting its application. First, the Labour Office proceeded through the medium of the factory inspectors to institute an inquiry in regard to the necessary exemptions and to the application of the various provisions of the Act. Similar questions for their respective industries were submitted to industrial and works councils throughout the country. Further, the Joint Commissions, which work under the supervision of the General Director of Mines and of the General Director of the Factory Inspection Department, have begun to examine the method of application for each large industrial group. Finally, the Supreme Council of Labour will meet, and on the proposal of its chairman, Mr. Cooreman, will divide itself into five groups which will examine the various provisions of the Act on the basis of the information which has been collected. Subsequently, the Supreme Council of Industry and Commerce, and in certain cases the Supreme Council of Health will have to give their views, and then, with the results of all these discussions in his possession, the Minister of Industry and Labour will be able to submit to the King decrees providing for exemptions, both of a general and of a particular character.

Third International Congress for the teaching of domestic science

The third international Congress of the International Federation for the teaching of Domestic Science is to be held at Paris from April 18-22, 1922. The subjects on the agenda of this Congress are as follows: The teaching of domestic

science in the various countries since the Ghent Congress in 1913; the teaching of domestic science in the elementary school; domestic science as a branch of general training in the education of girls in all classes; agricultural schools of domestic economy; continuation classes in domestic economy; training of domestic servants (compulsory examination); guidance as to choice of an occupation; inspection of the teaching of domestic science; domestic science in the University; to what extent can schools of domestic science contribute to improving social conditions from the point of view of housing, food, infantile hygiene, co-operative buying, high prices, adulteration of foodstuffs?

The object of the International Federation is to promote the development of the teaching of domestic science in all countries with the help of the authorities, scientific and occupational associations and individual members. The Federation includes official representatives of various governments (which make an annual grant to the Federation), and individuals, institutions, associations and administrations which are interested in the question of the teaching of domestic science. Since 1908 the Federation has maintained an international office in Fribourg for the teaching of domestic science. The functions of this office are, among other things, to constitute an international library of all publications relating to domestic science; to keep an up-to-date bibliography of these publications; to collect by means of enquiries reliable information concerning the numerous organizations for the teaching of domestic science and concerning existing institutions; to promote the study of questions suitable for inclusion on the agenda of future congresses; to convene international congresses and to assist the committees of such congresses. The office publishes a bulletin.

The International Congress of intellectual workers

22 last. The Congress had to discuss

The International Congress of Intellectual Workers was held in Brussels on August 20-

two questions: (1) The international organization of intellectual work with a view to assisting intellectual workers in all countries in their personal work and promoting the progress of science; (2) the organization of intellectual workers for the defence of their economic interests. In considering the question of obtaining the support of the League of Nations, the Congress instructed the Union of International Associations, one of whose secretaries is Mr. Lafontaine, Belgian Representative to the Assembly of the League of Nations, to approach the League with a view to the development of the organization of intellectual work on an international scale. M. José Germain described the process of its successful organization in France, and warned the Congress against the danger of attempting an international organization before all intellectual workers concerned had first been organized on a national basis. The representative of the International Labour Office informed the Congress that there was nothing in the text of the constitution of the International Labour Organization to prevent it from dealing with intellectual workers, but he made this statement under reservation of the opinion of the Governing Body, which had not yet been called upon to define its attitude on the point. The Congress passed the following resolution: "The Congress of Intellectual Workers held at Brussels from August 20-22, 1921: (1) takes into consideration the draft scheme for an international confederation of intellectual workers which has been submitted to it; (2) instructs the Confederation of Intellectual Workers to organize propaganda in the various countries with the view to constituting in every country an international organization of intellectual workers affiliated to the International Confederation; (3) instructs the Union of International Associations to communicate immediately with the organs of the League of Nations and the International Labour Office in regard to the aforesaid questions."

Industrial survey by college students

The Research Bureau of the San Francisco Chamber of Commerce has undertaken an industrial survey of that city with the co-operation of the University of California. The purpose of the survey is to obtain complete information regarding manufacturing activity upon which to base an intelligent industrial promotion campaign. On September 15, one hundred and fifty students of the economics class of the University began a canvass of the city. First the city was divided into districts and a student was assigned to each district to ascertain the name and location of all the manufacturing plants therein. A letter was then sent to every manufacturing concern explaining fully the purpose of the survey. A student would then be assigned to each industrial group, such as chemical, shipbuilding, etc., and required to fill in a schedule by personal interview with the head of each plant. The questions to be asked relate to the character of the organization, the kind of building occupied, equipment, raw materials, fuel consumption, production, and its value. When all the schedules are filled, the work of compilation and analysis will be done by the Research Bureau of the Chamber of Commerce, and it is expected that the work will be completed by December 15. When the work is completed it will give complete information regarding manufacturing activity in San Francisco, the consumption total of all raw materials, the employment of labour, pay roll figures for groups and for the whole manufacturing interest, the volume of business, and definite facts regarding the difficulties which the management in each industrial group seeks to overcome. The survey will provide a basis for intensive studies on special lines of activities which are either inadequate or wholly unrepresented in San Francisco, and it is expected that opportunities will be revealed for many new industries, and a campaign can be made to attract capital to establish them. It is claimed that both the University and the city will benefit from the co-operation as it

will establish a closer relation between business and educational leaders. The students who have been selected to make the canvass will also benefit. They will be brought into personal contact with business men, gain experience in field research, and have opportunity to examine at first hand business organizations, factory equipment, methods, and manufacturing processes.

Economic value of safety work

Mr. C. P. Tolman, president of the United States National Safety Council, in a recent address before the Cleveland Engineering Society emphasized what he regarded as a basic principle in safety work, namely, that "properly conducted accident prevention work pays a larger return on investment and operating cost than any other department of the ordinary industrial plant." Mr. Tolman submitted a statement prepared by the National Safety Council respecting the cost of industrial accidents in the United States during 1919, containing the following information:

Human lives lost.....	23,000
Accidents each causing 4 weeks' disability or more.....	575,000
Accidents involving one day disability.....	3,000,000
<hr/>	
Total equivalent working days lost.....	296,000,000
At average wage of \$4 a day.....	\$1,184,000,000
Incidental expense — medical, surgical, hospital, insurance, etc.....	\$ 161,000,000
<hr/>	
Total.....	\$1,345,000,000
Credit—for the subsistence of 23,000 men who no longer need clothes, food nor housing. \$	331,000,000
<hr/>	
Balance due.....	\$1,014,000,000

In support of his argument, the speaker cited the white lead industry in which portable dust collectors had been developed and used for sanitary reasons. Out of curiosity the lead dust saved had been weighed. The average of all factories showed a saving of lead amounting to a return of over 30 per cent on the investment. As an example of increased production reference was

made to a factory using presses operating 10 strokes a minute. At this rate there was an alarming number of cases of loss of fingers. The presses were therefore slowed down to 7 strokes per minute, but the number of accidents remained serious. A method was then devised by means of which, in order to operate the press, the workman had to use two switches, one hand on each switch, so that he could not possibly get hand or fingers near the press while it was operating. The presses were then

speeded up to 12 strokes per minute, making an increase in production of 70 per cent with safe operation. The speaker claimed that in woodworking plants, dull, not properly set, or not properly gummed saws were responsible for 70 per cent of the saw accidents, and it had been agreed that the average plant would eliminate these accidents and make a net gain of 20 per cent in production with the same equipment, the same labour, and less power by keeping the saws in reasonable order.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

I.—The Labour Market, Strikes, Prices

The Labour Market

THE curve of employment based on returns from employers showed a further upward movement during September; the tendency was more marked in the first part of the month but a considerable net gain was registered on the whole. In comparison with the corresponding period of last year, however, serious depression continued. Reports from trade unions indicated a more favourable situation at the beginning of September than at the beginning of August, though the increase in activity was not as pronounced as the increase in August over the preceding month. An exceptionally large volume of business was transacted by the offices of the Employment Service during August, vacancies notified, applicants registering and placements effected all showing important gains. This activity largely reflected harvest demands and was expected therefore to continue into September, though on a less decided scale.

Weekly reports from employers to the Dominion Headquarters of the Employment Service of
EMPLOYERS' Canada for the period
REPORTS August 14 to September
10 showed a considerable
increase in the volume of employment.

The index number for the period averaged 89.1 as compared with 107.7 for the corresponding period of last year. During the first half of the period (August 14 to 27) there were pronounced contractions, largely as a result of temporary shut downs in railway car shops. During the early part of September, however, the gains made much more than counterbalanced these losses; on the whole, over 6,000 persons were added to the staffs of the firms making returns. During the fortnight ended August 27, contractions were recorded in Quebec, Ontario and the three Prairie provinces. The Maritime district and British Columbia, on the other hand, experienced slightly greater activity. For the second part of the period under review there were nominal declines in British Columbia, with pronounced gains in Quebec, Ontario and the Prairie provinces. The Maritime section also registered an increase in employment though on a much smaller scale. In comparison with returns for the corresponding period in 1920 employment in the four western provinces and in the Maritime provinces was maintained at a level approaching more nearly that of last year than in Quebec and Ontario.

The industries which showed the most pronounced net increase over the previous period were logging, edible plant

products (particularly in canneries) textiles (largely in clothing, knit goods and thread, yarn and cloth production), coal mining, railway and water transportation and retail trade. In many cases these gains represent a continuation of the activity already noted in the July-August period. In logging, however, the reverse is true, for it was not until the latter part of August that early seasonal operations superseded summer inactivity. Additions to staffs, though on a less decided scale, were also recorded in rubber goods and wholesale trade; the former indicated some recovery in the early part of September from losses recorded almost continuously during the summer. This also may be said of retail trade in which employment had been at a low level for several months. In the textile division the net additions to staffs exceeded 3,800 persons; they reflect seasonal activity as well as recovery from contractions spread over many months. It is interesting to note that the gains made in textiles were larger than those recorded during the corresponding period of 1920, but at the same time employment in the group was at a lower level. An increase in coal mining was reported from Alberta, but in Nova Scotia employment was practically stationary. Saw mills continued to register pronounced declines in activity; the losses in this group and those in pulp and paper products, which were also extensive, indicate to a large extent seasonal inactivity. Decreases on a much smaller scale were recorded by firms in building and railway construction, tobacco factories, telephone operation, non-metallic minerals other than coal, metallic ore mining, and hotels and restaurants. The losses in the last named reflect the closing of summer hotels during September, mainly in Alberta. The declines in the other groups were of a general nature, most of the provinces participating in the downward movement. In iron and steel products the net change was very slight. Large decreases in the first part of the period under review were recorded in railway car and other vehicle manufacturing, in the crude, rolled and forged products and

agricultural implement divisions. Compensating gains, however, were registered early in September, in land vehicles, ship building and repairing and wire products manufacturing. Crude, rolled and forged products and agricultural implements made only partial recovery.

In comparison with the returns for the same period in 1920, considerable depression was indicated in practically all groups; the only exceptions were leather products, coal mining, local and water transportation. Employment in the manufacturing group as a whole was considerably less active; dullness was especially marked in the lumber, iron and steel, rubber and miscellaneous manufacturing divisions. Clay, glass and stone products also displayed weakness, and logging operations continued to be curtailed largely.

There was a further, though slight decline in unemployment reported by trade unions at the beginning of September, a continuation of the improvement manifested during the last five months. As in the case of the employers' returns, however, union statements indicated considerably more inactivity than in the corresponding period in 1920. (Unemployment as used here has reference to involuntary idleness due to economic causes; persons occupied in work other than their own trade, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to those unions reporting.) The slight improvement over the preceding month was largely due to increased employment for transportation workers and in the mining, fishing and lumber working and logging groups. In comparison with the returns for September, 1920, considerably more unemployment occurred in

every group. All provinces, except Quebec and Ontario, reflected more favourable conditions as compared with August, 1921; in the former there was approximately three per cent more unemployment among the unions reporting, but in Ontario the decrease was only nominal.

Returns were tabulated from more than 1,600 unions, whose membership aggregated nearly 189,000 persons. Of these, almost 16,500 were unemployed, a percentage of 8.7 as compared with 9.1 in the preceding month. The percentage of unemployed members at the beginning of September 1920, however, was only 2.4. In the manufacturing and mechanical industries, as a whole, there was a decline in the volume of employment, particularly in that afforded in the metal trades. In addition, workers in the leather, pulp and paper and printing and publishing groups were not as fully employed; in the last named group some of the slackness was an indirect result of the industrial dispute which has been in force for several months. Leather workers and glass bottle blowers, moreover, were scarcely as fully employed. On the other hand, there was less idleness reported in food, tobacco and liquors; in the clothing group the situation showed a slight improvement, while textile workers also were more actively employed. Unions in the transportation group recorded about one per cent less unemployment, workers on steam railways, in the navigation and local transportation divisions all registering fewer idle members. Organizations of miners also reported more favourable conditions; they indicated about three per cent less idleness. The greater part of this increase in activity occurred in coal mining in Alberta and Nova Scotia; asbestos miners in Quebec reported more unemployment. The percentage out of work among unions in building and construction stood at 18.2 as compared with 18.7 at the beginning of August and with 3.0 per cent in September, 1920. All provinces indicated considerable slackness in this group, but the bulk of the unemployed tradesmen were again

reported from Quebec and Ontario. Fishermen and lumber workers and loggers continued to show slightly smaller percentages of idleness, though large numbers of their members continued to be without work. In the miscellaneous group of industries there was slightly less activity; hotel and restaurant employees, barbers and unclassified workers registered more unemployment. On the other hand, theatre employees, with the commencement of the autumn season, were slightly busier, as were also stationary engineers and firemen.

The volume of business transacted by the offices of the Employment Service of Canada during the four-week period ended August 13, 1921, was considerably larger than in the previous four-week period, due to the increased demands for harvest workers in the western provinces. During the period under review the volume of applications and vacancies increased rapidly, and during the week ended August 13, applications registered the highest point attained since the establishment of the Employment Service. Placements also attained a very high level during the last week of the period under review, showing a considerable increase over the number reported during the same week of 1920. When comparing the four-week period under review with the corresponding period of last year, there was a slight decrease in the number of placements, while the number of applications registered and of positions offered by employers showed marked increases. During the period under review applications for work greatly exceeded the vacancies offered, while during the harvest seasons of 1920 and 1919, the demand for workers was in excess of the supply.

During the four-week period ended August 13, 1921, the offices of the Service reported that 41,227 persons were referred to positions and that 34,412 (31,724 men and 2,688 women) were placed. Placements reported during the preceding four-week period

numbered 20,667, while during the corresponding period of 1920 there were 35,368 placements effected. In addition to the above, 5,030 placements were made in casual employment (one week or less), as compared with 5,774 reported during the preceding four-week period, and 6,836 during the corresponding period of 1920. During the period July 18 to August 13, 1921, employers notified the Service of 49,970 vacancies, of which 42,594 were for men and 7,376 for women workers. Vacancies during the previous period totalled 31,590; and during the corresponding period of last year 47,373 vacancies were reported. The number of applications reported by the offices during the period under review was 52,445 (44,971 being men and 7,474 being women); applications registered during the preceding period numbered 37,786; and during the corresponding period of 1920, they totalled 40,814.

Employment in the building trades, as indicated by the value of the building permits issued during August showed a further decline as compared with the preceding month.

BUILDING PERMITS. The value of the permits issued in 56 cities totalled \$9,654,095 as compared with \$10,137,547 in July and with \$10,257,489 in August of last year. This indicates a decrease of nearly 5 per cent in the former and not quite 6 per cent in the latter comparison. New Brunswick, Alberta and British Columbia registered increases in the value of the permits issued, while the other provinces showed losses, as compared with the preceding month. Quebec, Manitoba, Alberta and British Columbia manifested gains over August, 1920; in the remaining provinces there were declines, that of over \$872,000 or 17 per cent in Ontario being the most pronounced. Of the larger cities, Toronto, Montreal and Winnipeg reported reductions in value of the permits issued as compared with July. The two centres first named also reported less activity than in the corresponding month of last year, but in Winnipeg the value for August

exceeded that registered for the same month in 1920. In Vancouver the permits issued totalled a slightly larger sum than in the preceding month; the value, however, was less than in August, 1920. St. John, Three Rivers, Kitchen-er, Sault Ste. Marie, Calgary, Edmonton and Point Gray made advances as compared with both July, 1921, and August of last year.

Strikes

The loss of time on account of industrial disputes during September was less than during August, but greater than during September, 1920.

There were in existence at some time or other during the month 22 strikes, involving about 3,535 workpeople and resulting in a time loss of 69,100 working days, as compared with 24 strikes, 3,221 workpeople and 83,105 working days in August, 1921; and 29 strikes, 2,806 workpeople and 28,330 working days in September, 1920. On September 1 there were on record 18 strikes affecting 2,914 workpeople. Four strikes were reported as having commenced during September, as compared with two during August 1921. Three of the strikes commencing prior to September and the four strikes commencing during September were reported terminated, leaving 15 strikes, involving about 2,429 workpeople on record at the end of the month.

Prices

The Departmental index number of wholesale prices was again slightly lower, standing at 232.7 for September as compared with 236.4 for August; 326.6 for September, 1920; 301.5 for September, 1919; and 141.3 for September, 1914. The decrease for the month was chiefly in livestock and meats, but there were slight decreases in grains and fodder. In dairy products butter and cheese were lower but eggs and milk were upward. In fruits and vegetables, miscellaneous foods, hides, leathers, boots and shoes, building materials, and chemicals there were slight decreases. Raw cotton, lead and silver, and raw furs were higher.

In retail prices, the average cost of a list of twenty-nine staple foods in sixty cities was \$11.82 at the beginning of September as compared with \$11.44 in August; \$15.95 in September, 1920; \$14.33 in September, 1919; and \$7.85 in September, 1914. The chief increase for the month was in potatoes, the prices

for the new crop being high as compared with old stock at the beginning of August, but about the same as for the new crop a year ago. There were also increases in lard, eggs, butter, cheese, and sugar. Bituminous coal and wood averaged slightly lower but anthracite coal was slightly higher.

II.—Industries and Trades during September, 1921

Logging

Logging in Quebec continued to show local fluctuations in employment during the month of September. Firms at Louiseville, Mungo, Three Rivers and St. Jovite Station still reported partial or complete cessation of operations. Hull firms, however, were despatching many more men to the bush than in August. Montreal also reported greater activity, but River Desert and La Tuque indicated no changes. In Ontario there were much the same local fluctuations, but on the whole there was greater expansion. Logging operations at Blind River, Braeside, Pembroke and Upper Ottawa points registered considerable increases. Haileybury, Midland, Fort Frances and Nestorville showed very small changes, though the tendency was towards a reduction of staffs. Employment in logging at Alert Bay, Headquarters and Kamloops in British Columbia was on the decline, a continuation of the movement recorded during August. Information received respecting the month of August, which was not available for insertion in the previous issue of the LABOUR GAZETTE, shows that timber of all species scaled in that province in that month totalled 188,318,312 feet as compared with 176,233,128 feet in July, Douglas Fir continuing to predominate.

Mining

The total volume of employment afforded in coal mining continued to show gains, particularly in Alberta. Condi-

tions on the whole in Nova Scotia remained static, slight increases in some mines having been offset by declines in others. At Blairmore, Alberta, there was considerably more activity. Other centres registered smaller gains; at Coleman there were minor losses. Conditions in British Columbia were much the same, insignificant declines being more than counterbalanced by rather small additions to staffs. The general tendency in metaliferous mining was to decrease payrolls. In Ontario, there were some gains on the whole particularly at Timmins and South Porcupine; Trail, Anyox and Kimberley, B.C., however, registered more pronounced reductions in employment. Quarrying manifested slight fluctuations, the downward trend predominating.

Manufacturing Industries

Sugar refining at Dartmouth was more active, but at St. John employment in such factories decreased.

FOOD PRODUCTS. Chocolate manufacturing at Halifax and St.

Stephen was considerably brisker, firms at these centres employing more persons in September than for several months past. There were also increases in employment in the sugar group at Kitchener and Wallaceburg in Ontario and at Vancouver, B.C. At Chatham, Ontario, staffs remained stationary in the sugar refineries, while at Montreal decreases were registered. Flour milling at Port Colborne, Ontario, showed slight gains, but at Keewatin there were minor losses. At Winnipeg

flour mills showed a tendency to increase staffs though the movement was not pronounced. Biscuit and confectionery plants at Brantford and generally also in London and Toronto, employed a larger number of persons, though there were local fluctuations in the last two cities. At Fort William starch manufacturing experienced some dullness. Canneries continued to report marked seasonal activity, more particularly in Ontario, but also in British Columbia. Abattoirs in Montreal reflected slight increases in payrolls, though there were some local fluctuations. At Hull, Que., employment remained practically stationary; meat packing at Peterboro, however, displayed some weakness. In Toronto there was an inclination to reduce staffs, though in some cases there were slight gains. In Winnipeg this industry indicated improvement though on a small scale. Abattoirs and meat packing plants at Calgary and Edmonton also afforded more employment, but generally there was little change in the manufacture of edible animal products.

The iron and steel industry as a whole reflected better conditions than during

IRON AND STEEL PRODUCTS.

August, partly as a result of the re-opening in the early part of the month of railroad shops closed temporarily at the end of August. At New Glasgow one important factory was still shut down; another indicated a nominal increase in employment while in a third there were slight declines. At Sydney there was less activity on the whole though there were some gains in individual plants. Shipbuilding at Halifax afforded considerably less employment than in August. On the contrary, better conditions prevailed in shipbuilding at Montreal and Three Rivers. At Sorel staffs remained practically stationary. In British Columbia shipyards, employment showed local fluctuations in different centres; at Victoria more employment was afforded than has been registered since April, but at Vancouver there was less activity.

Car manufacturing at Montreal was considerably brisker, largely as recovery from the shutdown mentioned above; but in addition to this re-opening there was also greater activity in other establishments in the vehicle division. The manufacturing of boilers and engines at Montreal employed fewer persons. In crude, rolled and forged products also there were reductions in staffs; increases made by some firms were more than offset by declines in others. Sheet metal working at Montreal showed improvement, as did also office and business machinery manufacturing at Terrebonne. Tool manufacturing at Rock Island manifested some recovery from the losses reported in August. At Sherbrooke there were further declines in general machine factories; sewing machine making at St. John's also reported a continuation of dullness. On the whole there was less activity in the manufacture of fire arms though there were local fluctuations at Brownsburg and Quebec. Static conditions prevailed in employment in iron and steel fabrication at Longue Point. Agricultural implements manufacturing at Brantford showed some recovery from previous losses. At Hamilton, however, further reductions were made by one firm in this division, while another firm indicated considerably more activity than in August, though the employment it afforded was very much below normal. This industry at Smith's Falls and Toronto experienced further contractions in employment. General machine shop products and boiler engine and tank factories at Brantford indicated dullness. The manufacture of hardware at Brockville, on the other hand, showed gains. In the vehicle division, varied conditions prevailed; increases at Chatham, Kingston, Oshawa, Walkerville, Windsor and Weston were more than offset by decreases at Ford, Hamilton, Ottawa and North Bay. Rolling mills at Hamilton registered slightly more activity on the whole, though there were local fluctuations; at Swansea and Sault Ste. Marie there was less employment. The manufacture of heat-

ing appliances at Guelph and London employed fewer people; Toronto, on the other hand, indicated slightly more employment in that division. In iron pipe factories at Guelph and Welland there were net reductions though on a small scale. Wire manufacturing at Hamilton reported some recovery from losses sustained during August, though there were minor fluctuations in different establishments. Iron and steel fabrication in Winnipeg was less active; slight increases in some plants being more than offset by similar losses in others. The rolling mills at Selkirk afforded considerably less employment.

On the whole the situation in leather showed a tendency to improve though the change was not marked. At Montreal LEATHER AND RUBBER PRODUCTS there were gains in some factories; others reported smaller staffs

while a third group of firms registered no changes. In this centre, however, there was a net loss in employment in September as compared with August. On the other hand, there was more activity in boots and shoes at Quebec and St. Hyacinthe. At Toronto one large firm reported expansion; in London there were losses. Shoe factories at Galt and Kitchener were busier. Considerable recovery from the losses registered during July and August was reported in the manufacture of rubber goods at Granby, Que. In Montreal increases in staffs in some rubber factories were more than counterbalanced by losses in others. Fountain pen manufacturing in that city maintained an even volume of employment. In Toronto on the whole, there was more activity in rubber, but different factories displayed contrary tendencies. At Guelph and Bowmanville additions to staffs were reported; increases were also made at Kitchener. The rubber factory at Port Dalhousie remained closed down indefinitely; at Merritton, on the other hand, the factory which had been shut down

for a month resumed activity in September, though the staff was still below normal.

The lumber industry showed further net contractions during the month of September, indicating the completion of the season's operations in saw mills. At Plaster

Rock, N.B., there was a considerable reduction in the number of persons employed in the manufacture of rough and dressed lumber. In the province of Quebec also, lessened activity on the whole was reported, particularly at Breakeyville and Quebec city. At St. Pacôme and Montreal practically no changes were made. Furniture manufacturing at Beauharnois, Coaticook and Cowanville showed small gains. Saw mill operations at Arnprior and Fort Frances, Ont., manifested a slight expansion. At Pembroke there were no changes in employment, while at Rockland there were important additions to staffs following a partial shut down during August on account of low water. At Keewatin saw mill operations were largely curtailed. As in the case of Quebec there was greater activity on the whole in the furniture factories in Ontario; Brantford and Stratford reported fair sized gains, but in Newmarket there were declines offsetting to some extent these increases. Carriage factories at Orillia and Chatham displayed greater activity than in August; at Toronto the manufacture of billiard tables showed an increase. Shook making at Pembroke was less busy. In Manitoba the saw mills at The Pas reported considerable curtailment in operations. British Columbia also recorded reduced employment in rough and dressed lumber. Slight increase in staffs engaged in this industry at Chemainus, Golden, and in some Vancouver mills were more than counterbalanced by more pronounced losses at Fraser Mills, Wardner, and in other Vancouver factories.

The employment afforded in pulp and paper mills was generally less during

PULP AND PAPER.

September than in August. The manufacture of paper at St. John and Bathurst, N.B., and Murray, N.S., was considerably less active. At Chatham, N.B., and Liverpool, N.S., staffs remained on the August level, though in the latter centre particularly employment was below normal. In the province of Quebec varied conditions were noted; the paper mills at Hull reported greater activity, as did also those at Donnacona, Cap Magdeleine, Chandler, Chicoutimi and East Angus. On the other hand lessened operations were indicated at Three Rivers, Shawinigan Falls, Windsor Mills, La Tuque and Bagotville. In Ontario also there were local fluctuations. At Cornwall, Thorold and Smooth Rock Falls employment manifested expansion; these gains, however, were more than offset by considerable contractions at Ottawa, Sault Ste. Marie, Espanola and Hawkesbury. At Toronto printing and bookbinding was slightly less active.

The textile and garment manufacturing industry on the whole showed much greater activity in August.

TEXTILE PRODUCTS.

In New Brunswick, however, there was less employment in the cotton mills, some employees having been released at Milltown and St. John; at Marysville, however, there were minor gains. A large knitting mill at Truro, N.S., re-opened after a shut-down for repairs, thus affording considerably more employment. At Yarmouth cotton manufacturing was not as busy as in August. At Montreal textile factories indicated greater activity; a large firm manufacturing men's furnishings re-employed a large staff following a temporary shutdown. The manufacture of women's clothing also made gains at Montreal. In Quebec city, corset manufacturing evidenced activity; cotton and silk manufacturing at Sherbrooke afforded more employment. At Three Rivers the cotton mills maintained about

the same level as in the preceding month. Knitting mills at St. Hyacinthe and men's furnishings and silk goods production at St. John's employed larger staffs than in August. At Magog, Lachute Mills, and Montmorency Falls the textile factories were busier, while at Valleyfield practically no change was made in staffs. Men's and women's wear manufacturing at Toronto showed expansion; knitting and bedding manufacture also displayed increased activity. In the manufacture of cloth, however, there was some weakness. Cotton production at Hamilton showed small gains; garments and personal furnishings experienced slight increases on the whole though there were local fluctuations. At Brantford cordage and knitting factories maintained the same level of employment as in August. At Cornwall and Welland there was considerably less activity in cotton manufacturing. At Peterboro fair sized additions to staffs were recorded and mills at Hespeler also indicated expansion. At Edmonton, Alberta, garment manufacturing was busier.

Broom and brush making at St. John continued to show gains though the employment afforded

MISCELLANEOUS PRODUCTS.

Musical instrument production at Montreal indicated slight declines; more pronounced losses were recorded in electrical apparatus manufacturing. On the other hand, electric current companies made gains. The volume of employment afforded in tobacco factories showed local variations, but a downward tendency was noted. In the early part of the month there were important losses in tobacco making at Montreal and only partial recovery was noted at the end of September. Electrical apparatus manufacturing at Hamilton showed some gains, offset by slight losses. In that city also slightly reduced activity was afforded by power companies and in tobacco making. Electrical apparatus making at Stratford was not as active as in August, steady declines being recorded

during the month. This industry at Toronto maintained about the same level of employment, increases and decreases of approximately the same magnitude were reported by different firms. Musical instrument production was in greater volume, as was also soap making. Power companies in Toronto displayed greater activity. At Walkerville the manufacture of chemicals and drugs afforded less employment, while distilled liquor making remained at the same level. In Winnipeg gains made by one important electrical current company were nearly offset by slight losses in another. This industry at Vancouver showed a tendency towards reduction. Nickel refining at Copper Cliff and Port Colborne, Ontario, was considerably curtailed. Brass, bronze and copper products manufacturing at Hamilton showed slight improvement. Employment in jewelry manufacturing at Montreal and Sherbrooke also manifested expansion. At Anyox, B. C., refining and smelting plants experienced considerable losses.

Construction

The Canadian Pacific, Grand Trunk and Canadian National railways reported a net increase in the volume of employment afforded on railway construction including maintenance of way during the month of September; about 1,400 more persons were on their staffs at the end of the month than at the close of August. The improvement was general during the month, the exodus of construction workers to the harvest having been stopped in the first week. The most pronounced gains were those of approximately 1,000 persons made by the Canadian National; the Grand Trunk added 400 workers to its construction forces, while Canadian Pacific staffs remained practically stationary. During August the value of building permits issued in 56 cities amounted to \$9,654,095 as compared with \$10,137,547 in July, a decline of about five per cent. New Brunswick, Alberta and British Columbia showed increases in the value of the permits issued, while

decreases were recorded in other sections of the country. Reports from large contracting firms also indicated reduced activity in building construction on the whole. At Halifax there were small increases in the employment afforded. St. John firms showed minor changes; the tendency, however, was to reduce staffs. At Montreal, slight declines made by some concerns were more than offset by additions to staffs in others. Employment at Toronto during September was maintained at about the same level as in August though there were local fluctuations. At Windsor, Walkerville and New Liskeard building operations showed curtailment. On the other hand, firms in Hamilton, London and Kingston were somewhat busier. At Winnipeg there was less activity; Banff, Alberta, also reported slackened operations in irrigation work. At Penticton, B. C., there were some gains, but Vancouver reported small losses.

Transportation

The gross earnings of the Canadian National Railways during September were \$10,548,591, as compared with \$8,881,530 in the preceding month. Information received respecting the month of August, which was not available for insertion in the previous issue of the LABOUR GAZETTE, shows that the gross earnings of the Canadian Pacific Railway in August were \$17,064,266 as compared with \$15,772,929 in July, and \$17,994,769 in August, 1920. During September the number of persons employed by the Canadian Pacific, Grand Trunk and Canadian National railways in operation, including general offices, trainmen, engine crews, station employees, sleeping, parlour, and dining car employees, showed an increase of about 1,300 persons. Over 1,100 of these employees were added to Canadian Pacific staffs; the Grand Trunk showed an increase of about 250 persons, while the Canadian National Railways indicated a small decrease in employment. Electric railway transportation during

September remained at approximately the same level, though there was a very slight upward tendency. Employment in water transportation displayed its customary irregularity, but on the whole there was decreased activity at the Upper St. Lawrence and British Columbia ports.

Trade

Retail trade as reflected in the pay-rolls of large departmental stores reported considerably more activity than in August, particularly in the early part of the month. On the other hand wholesale trade showed a disposition to decrease.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Proceedings for the Month of September, 1921, with text of Boards' Reports.

DURING the month of September the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the Montreal Tramways Company and certain of its employees, being members of Division No. 790, Amalgamated Association of Street and Electric Railway Employees of America, and (2) the Western Stevedore Company, Fort William, Ont., and certain of its employees, being members of Twin City Lodge No. 605, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Two applications were received for the establishment of Boards, further appointments were made in connection with an application which had been received during the previous month.

Applications Received

During the month of September applications for the establishment of Boards were received as follows:—

(1) From the employees of the Toronto Union Station, being assistant baggage agents, etc., members of Division No. 123, Canadian Brotherhood of Railroad Employees. Through the mediation of an officer of the Department the parties concerned agreed to allow this matter to remain in abeyance

pending the decision of a Board already established dealing with a dispute involving the same class of employees.

(2) From the employees of the Algoma Steel Corporation, Sault Ste. Marie, Ont., being engineers, firemen, conductors and brakemen. At the close of the month this dispute was receiving the attention of a special officer of the department, looking towards a settlement through renewed negotiations.

Other Proceedings under the Act

During the month of September the Board established to deal with the dispute between various railways, (namely the Canadian National Railways, the Canadian Pacific Railway, the Grand Trunk Railway and the Toronto, Hamilton and Buffalo Railway), members of the Railway Association of Canada, and certain of their employees, being engineers, firemen, conductors, trainmen, yardmen and telegraphers, was completed. Mr. Isaac Pitblado, K.C., Winnipeg, was appointed by the Minister as representing the employers, in the absence of a nomination from the companies concerned, and the Honourable Mr. Justice F. S. MacLennan, Montreal, was appointed chairman. The chairman was appointed by the Minister in the absence of a joint recommendation from the two members, Messrs. Pitblado and Campbell.

Report of Board in Dispute between the Montreal Tramways Company and certain of its employees

A report was received from the Board established to deal with the dispute between the Montreal Tramways Company and certain of its employees, being members of Division No. 790, Amalgamated Association of Street and Electric Railway Employees of America. The Board was composed of Messrs. Adolphe Bazin, chairman, A. P. Frigon and Arthur Brossard, Montreal. The report was signed by the chairman and Mr. Frigon and contained recommendations as to settlement. Mr. Brossard presented a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Montreal Tramways Company, Employer, and certain of its employees, being members of Division 790, Amalgamated Association of Electric Railway Employees of America, Employees.

Montreal, September 20, 1921.

Honourable G. D. Robertson,
Minister of Labour,
Ottawa.

Sir,—

Last year, a Board of Conciliation and Investigation, composed of Messrs. J. B. Archambault, J. A. Woodward and E. W. Villeneuve, was appointed to settle the dispute then existing between the above-mentioned parties, in connection with the wages to be paid by the Montreal Tramways Company to its employees.

That Board submitted its report to you August 3, 1920, in which is found the wage scale as adopted, as well as the following resolution:

"We further recommend that the above suggested scale be applicable for

a period of one year from July 1, 1920, and that it be automatically renewed for another period of one year upon default of either of the parties concerned to give notice of its intention to terminate the same thirty days before its expiry."

Following this report, an agreement was entered into August 25, 1920, between the Company and its employees, in which the scale of wages is substantially the same one fixed in said report.

On April 22, 1921, more than thirty days before the expiration of the agreement, the Montreal Tramways Company gave notice to its employees that it did not intend to continue the agreement in question, and this through the following letter:

Montreal, April 22, 1921

A. Lacombe, Esq., President,
Montreal Tramways Employees' Association,
Montreal.

Dear Sir,—

The agreement on Wages and Working Conditions entered into between the Montreal Tramways Company and its employees, dated August 25th, 1920, was based on the award of a Board of Conciliation and Inquiry, appointed by the Department of Labour, covering a period of one year from July 1st, 1920, to June 30th, 1921, to be renewed automatically for a further period of one year by default of either party to give notice of intention to discontinue same at least thirty days before expiration.

I desire to give notice that the agreement above referred to will, so far as the Montreal Tramways Company is concerned, terminate on June 30th, 1921, and will not govern thereafter.

While it is not the present intention to make any general readjustment of wages, etc., at the expiration of the agreement, the Management believes that it should be entirely free later to make any changes warranted by general economic conditions. A rather serious business depression is now being felt, which causes a feeling of uncertainty regarding the future.

Yours very truly,

(Sgd.) J. E. HUTCHISON,
General Manager

Long before July 13, 1921, the Company gave notice to its employees that, from the first day of August, 1921, it intended to reduce the wages as fixed in the agreement of August 25, 1921, to the extent of twenty per cent (20%).

That notice caused various interviews to take place between the Company and its employees, and finally, August 5, 1921, the Company decided to reduce wages to the extent of twelve and a half per cent (12½%), dating from August 16, 1921.

Notice to that effect was given the employees.

As a matter of fact, since that notice, wages were reduced to the extent of twelve and a half per cent (12½%).

The only question to solve is to know whether such decrease is unreasonable under the circumstances.

The employees of the Company alone appeared before the Board of Conciliation and Investigation. They made a long investigation and from the facts submitted to the Board they conclude that the present economic conditions as relating to the Company and to themselves are the same as those existing last year, and that as a consequence the scale of wages suggested by the Board of last year should be maintained.

The evidence does not justify such a conclusion. Economic conditions have changed. For instance: the cost of living has substantially decreased, as it appears from the *Labour Gazette*, English version, No. 8, Vol. XXI, page 1057 and seq.

On the other hand the Company's financial operations brought no improvement of its financial condition.

Moreover, it is of public notoriety that a severe crisis at the present time prevails in Canada as well as all the world over.

Under the circumstances, we believe the decrease of wages of the Montreal Tramways employees is not unreasonable.

All of which is respectfully submitted.

(Sgd.) ADOLPHE BAZIN,

(Sgd.) A. P. FRIGON.

Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of the dispute between the Montreal Tramways Company, Employers, and Division 790, Amalgamated Association of Electric Railway Employees of America, Employees.

Honourable G. D. Robertson,
Minister of Labour,
Ottawa.

Sir,—

According to the provisions of the Industrial Disputes Investigation Act, 1907, a Board of Conciliation and Investigation was requested, July 27, 1921, by the above-mentioned employees to inquire and report on a dispute arising from the reduction of wages imposed by the Montreal Tramways Company.

While appreciating the value of a unanimous report, I regret to be unable to agree with my colleagues on the Board and am obliged to present this minority report, in all justice to the men I represent, because that reduction of wages is unfair, for the following reasons:

The rate of wages to be paid to the employees of the Montreal Tramways Company was fixed by a unanimous report, dated August 3, 1920, of the Board of Conciliation and Investigation composed of Judge J. B. Archambault, president, E. W. Villeneuve, representing the Company, and J. A. Woodward, representing the men, and said report recommended that said wages be maintained for a year from June 30th, 1921.

The Montreal Tramways Company imposed a wage reduction of 12½ per cent from August 16 last, after having, on August 1st, 1921, given notice of said reduction, and refused to accept the arbitration of the above-mentioned Board of Conciliation and Investigation.

In violation of Article 57 of the Industrial Disputes Investigation Act, 1907, and in spite of the request for a Board of Conciliation and Investigation made, to its knowledge, by its

employees, on July 27, 1921, it changed the working conditions as to the wages of its employees, by imposing said reduction of wages.

I regret to have to say that, under the circumstances, the Company's conduct is not justified. The difficult period we are going through demands, on the part of the employer as well as of the employee, moderation and a spirit of conciliation, and the imposition of a reduction of wages by the Montreal Tramways Company, without any consideration for the Board of Conciliation and Investigation then in existence, and contrary to Article 57 of the Industrial Disputes Investigation Act, 1907, is a bad example given to workmen in general and is of such a nature as to provoke a feeling of uneasiness.

I understand that neither the employer nor the employee is obliged to accept a Board of Conciliation, but, on the other hand, in their common interest, the parties should accept it.

I believe the Montréal Tramways Company is not at present justified in reducing the wages of its employees to the extent of 12½ per cent, and still less to the extent of 20 per cent, as it wanted at first to do.

I am of the opinion that the position of employees, in disposing of their work, should be dealt with regardless of an employer's financial position. The employee, not being represented on the Board of Managers of the Tramways Company and having no part in the profits, cannot be called upon to share in the losses. This is simply a hiring agreement; but, according to the financial report submitted by the Tramways Board on August 29, 1921, the Company had, for the year ending June 30, 1921, a surplus of \$66,136.

Thus, to impose the reduction of wages, the Company cannot invoke, as it does, the business depression, since this year it has a surplus instead of a deficit.

In the dispute with which we are concerned, there are three parties: the Montreal Tramways Company, the employees and the public.

After the report from the Board of Conciliation and Investigation, dated August 3, 1921, the Company took the increase in wages granted by that Board as a pretence to increase the price of fares from 5c. as they were, to 6¼c. in tickets, and 6c. to 7c. in cash.

The Montreal Tramways Company does not offer and never expressed any intention of reducing the price of fares in case the wages of its employees should be reduced. The public, therefore, would draw no benefit from the reduction of the employees' wages.

It is for me only a question of considering whether the economic situation has changed since last year and whether the wages fixed by the Board of Conciliation and Investigation of August 3, 1920, is reasonable and should be continued for another year.

It was stated before the Board of Conciliation that motormen and conductors were earning, most of them, \$132 per month, and that it was a small number who reached \$144, and that several hundred employees are only earning a wage of less than \$75 per month.

The cost of living, since May last, has decreased by an average of 10 per cent, but, on account of poor crops, a rather substantial increase has been felt since the month of August.

I admit that at the present time there is in general a slight decrease in the cost of living, but we cannot say that the cost of living will not increase during the winter, which promises to be a rather hard one. At any rate, this small reduction in the cost of living, which may exist at the present time, is more than counterbalanced by a reduction of about 10 per cent in the working hours of the employees of the Montreal Tramways Company, resulting from the depression of the street car service and the withdrawal of about 140 cars from the service. The working hours of the employees are thus shortened, as well as their wages, proportionately.

I believe the guiding, if not controlling factor in forming an opinion on the rate of wages to be paid to the employees,

must be the cost of living. Then, under the circumstances, if one takes into consideration the high cost of living prevailing at the present time, as compared with the wages paid before the reduction of August 15 last, one comes to the conclusion that there is no reason for a reduction for another year, or until the economic situation has materially changed.

If we examine the wages paid to street railway companies' employees in the various cities of Canada and the United States, we find that in most of these cities the street railway companies pay higher wages than those fixed by the report of the Board of Conciliation and Investigation of August 3, 1920, and existing before the 12½ per cent reduction imposed on August 16 last.

I might quote the street railway companies in the cities of Toronto, Winnipeg, Vancouver, Edmonton, Calgary, Saskatoon, Portland, New York, Buffalo, Boston and Chicago, which pay higher wages than the Montreal Tramways Company.

I fail to see why the Montreal Tramways Company, which runs its business under a most advantageous contract in the City of Montreal and its suburbs, with a population of about 800,000, cannot pay its employees equivalent wages.

The Montreal public has the right to demand from the Montreal Tramways Company the best service and the latter can only give such a service, by having in its employ men who are conscientious, courteous, attentive, sober, intelligent and experienced, but, in order to keep such employees it must pay them a salary allowing them to live and support their family in a proper way, and before imposing a 12½ per cent reduction to its employees, the Montreal Tramways Company should wait until the cost of living has decreased to a more appreciable extent.

CONCLUSION.

I recommend that the scale of wages established by the report of the Board of Conciliation and Investigation, dated August 3, 1920, be maintained for a period of one year from July 1st, 1921, with the same working conditions, and that the Company reimburse to its employees the 12½ per cent reduction it has deducted from their wages since August 16 last.

All of which is respectfully submitted.

(Sgd.) ARTHUR BROSSARD,
Representing the Employees.

Montreal, September 22, 1921.

Report of Board in Dispute between the Western Stevedore Company, Fort William, Ont., and certain of its employees

A report was received from the Board established to deal with the dispute between the Western Stevedore Company, Fort William, Ont., and certain of its employees, being members of Twin City Lodge No. 605, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was composed of Mr. Fred Babe, Fort William, chairman, His Honour Judge Hugh O'Leary, Port Arthur, Ont., and Mr. T. J. Murray, Winnipeg. The report of the Board was unanimous and was accompanied

by a signed agreement between the parties concerned.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Western Stevedore Company, employer, and certain of its employees being members of Twin City Lodge No. 605, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station, employees.

Fort William, September 17th, 1921.

The Honourable G. D. Robertson,
Minister of Labour,
Ottawa, Ont.

Sir,—

The undersigned members of the Board herein commenced its sittings at the Court House, Fort William, on the 13th day of September, 1921, and held a sitting each day up to and including Saturday, the 17th of September, 1921.

During the meetings of the Board they were attended by the following: Mr. Henry Murphy, representing the Western Stevedore Company, and H. Carr, of Winnipeg, W. E. Turner, of Calgary, and V. H. Jones, of Fort William, representing the employees.

The parties to the dispute at their first meeting were not disposed to negotiate with each other concerning their differences, but at its first sitting the Board went over the various matters in dispute, eliminating those on which the parties were inclined to negotiate, and towards the close of its first session the parties were in a better frame of mind to reach a conciliation as between themselves.

During the interval of adjournment between the various sittings of the Board, the parties met together and showed a very good spirit and frankness, and the sittings of the last two days were occupied in endeavouring to settle some of the classifications and also a difference of only one cent per hour between the parties instead of a matter of nine cents as existed at the outset.

We are now pleased to state the parties have settled their dispute with regard to the one cent difference and have reached an agreement, a copy of which is attached hereto.

We believe that the result of our negotiations between the employer and the men and the reaching of the said agreement will have the effect of maintaining harmonious relations between the company and its men.

(Sgd.) FRED BABE,
Chairman.
(Sgd.) THOS. J. MURRAY,
(Sgd.) HUGH O'LEARY,
Members.

AGREEMENT BETWEEN BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES, TWIN CITY OF CANADA LODGE No. 605, AND WESTERN STEVEDORE COMPANY, FORT WILLIAM, ONTARIO.

The following rules and rates will govern the employment of freight-handlers and other employees in and around the freight sheds, boats and docks, employees of the Western Stevedore Company.

1. Ten hours shall constitute a day's or a night's work. Hours of service shall be as follows: Day work, from 7k to 12k and from 13k to 18k. Night work, from 19k to 24k and from 1k to 6k.

2. Time and one half will be paid for Sunday work, also for the following holidays: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day and one Civic Holiday each year.

3. Employees will be checked on not more than fifteen minutes before starting time.

4. All present checkers up to the number of fourteen (14) will be guaranteed eight hours' work per day.

5. Grievances, or violations of this agreement will be handled by the Protective Committee with the General Foreman. And in the event that a settlement is not made, they shall be taken up with the President of the Western Stevedore Company.

6. The duties of the various classes of employees shall be as follows:

(a) Checkers shall check freight, render assistance to foremen and supervise truckers.

(b) Stowers shall stow and pile freight in sheds and cars.

(c) Loaders shall load and call out freight under the supervision of checkers.

(d) Truckers shall truck and handle freight from boats to sheds and to cars and vice versa, also any other labouring work required. Clerical work of any description will not be required of those employees.

7. Employees temporarily or permanently assigned to higher rated positions shall receive the higher rates while occupying such positions; employees temporarily assigned to lower rated positions shall not have their rates of pay reduced.

8. Rates: of pay

General Foreman's Clerk...	\$101 per month.
Assistant Timekeeper.....	\$126 per month.
Assistant Timekeeper.....	\$116 per month.
Assistant Timekeepers (2)...	\$114 per month.
Stevedore (1).....	\$156 per month.
	4 at 59¼¢ per hr.
Day Checkers.....	54¢ per hr.
Night Checkers.....	56¢ per hr.
Day Stowers, Loaders, Locators and Coopers }	To be mutually agreed upon.
Night Stowers, Loaders, Locators and Coopers }	
Day Truckers.....	47¢ per hr.
Night Truckers.....	49¢ per hr.

9. The articles and rates of pay embodied in this agreement shall remain in effect until the close of navigation, 1921.
For the Company,

Western Stevedore Company,
(Sgd.) H. MURPHY,
President.

For the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

(Sgd.) H. CARR,
General Representative.
(Sgd.) V. H. JONES,
(Sgd.) L. S. TAYLOR,
(Sgd.) P. MEURRO.

COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS

THE Cost of Living Commission appointed on January 21, 1919, to determine every three months the changes in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should therefore be increased or decreased, forwarded its report to the Department for the quarter ending June 30, 1921.* The Commission consisted of Mr. Matthew Gunness, representative of the miners; Mr. Tulley Boyce, representing the operators; and Mr. D. T. Bulger, Fair Wages Officer of the Department of Labour, Chairman.

As in previous investigations, forms were sent out to the merchants and dealers with whom the majority of miners are accustomed to trade in the various localities. The forms contained the same list of groceries, provisions, meats, etc., that was used on previous occasions. The method of computing the changes for the period under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices

of June 30 over March 31, for groceries, provisions, meats, etc., and to add a further two-fifths of this increase, or decrease, as an equivalent to cover similar increases or decreases in clothing, etc. A decrease of 7.23 per cent was ascertained, which amounted to a decrease in wages of 21½ cents per day where the base rate was \$3 per day, and 22¾ cents per day where the base rate was \$3.15, the decrease in wages to become effective August 1, 1921, and to apply to all underground service, clerical and office employees.

Retail price list returns were made by general merchants and seven retail dealers in meats in the towns of Nanaimo, Ladysmith, Cumberland, Courtenay, South Wellington, Union Bay, Bevan and Cassidy.

Substantial decreases were noted in the prices of sugar, jam, syrup, lards, ham and bacon, butter and all meats. Slight decreases in cereals, canned vegetables and meats, soups, all flours, meals, flavoring extracts evaporated fruits. Slight advances were found in molasses, biscuits and cookies. No changes were noted in dry vegetables, coffee and tea, vinegar and pickles.

*For previous orders see LABOUR GAZETTE, June 1921 page 768, and various preceding issues.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1921

FOUR strikes, involving 621 employees were reported as having commenced during September. There were in existence at some time or other during the month 22 strikes, involving approximately, 3,535 employees and a total time loss estimated at 69,100 working days, as compared with 24 strikes, 3,221 workpeople and 83,105 working days in August, 1921; and 29 strikes, 2,806 workpeople and 28,330 working days in September, 1920. The time loss occasioned by the 4 strikes which began in September was 4,120 working days, while a loss of 64,980 working days is charged to the 18 strikes that commenced prior to September. Three strikes which commenced prior

to September were reported to have terminated. The four strikes commencing during September terminated during the month, leaving the following 15 strikes, involving 2,429 workpeople on record on September 30; loggers, Ocean Falls; employees of steel and coal companies, Sydney; guage men, Sydney; machinists, Orillia; compositors, Montreal; compositors, etc., Vancouver; photo engravers, Montreal; photo engravers, Ottawa; printers, Montreal; printers, Ottawa; printers, Toronto; printers, Winnipeg; printers, bookbinders and pressmen, Halifax; typesetters, pressmen and bookbinders, Hamilton; and cigarmakers at Vancouver.

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

LUMBERING.—A strike of 450 shingle workers, principally Oriental labour, occurred in the lower mainland district of Vancouver on September 15. The strike, which involved 15 operators, was in protest against a proposed reduction of the rates on piece work. After eight days' duration, the strike was terminated by the employees resuming work at the rate existing prior to the strike, this rate being possible, the operators claimed, because of a change in market conditions, which made a reduction unnecessary. The strike of loggers at Ocean Falls, B.C., which commenced on August 1, in protest against an alleged attempt to increase the working day to ten hours, remained unterminated. The men claimed they had offered to continue to work an eight-hour day at reduced pay, but were not permitted to do so.

METALS, MACHINERY AND CONVEYANCES.—The situation in this group was practically the same as regards time loss as during the previous month. One strike—that of sheet metal workers at Saskatoon—was terminated. A strike of boiler-makers and shipbuilders commenced on August 27 in Montreal. It involved 300 employees, who struck against a reduction of 2½ cents per hour. This strike terminated on September 6, the employees resuming work at the reduced rate. The unterminated strikes in this group were those of the employees of the steel and coal companies at Sydney, and the machinists of one firm in Orillia. The approximation for the month was: 4 strikes, involving 481 employees with an estimated time loss of 5,725 working days.

PRINTING AND PUBLISHING.—In a number of localities the printing and publishing trades were still continuing their strike for the general adoption of the 44-hour week. At the end of the month, there were in existence 10 strikes, involving 1,943 employees with

STRIKES AND LOCKOUTS DURING SEPTEMBER, 1921

Industry or Occupation.	Particulars.	No. of employees affected.	Time loss in working days.
Strikes commencing prior to September, 1921			
LUMBERING—			
Loggers, Ocean Falls, B.C.	Commenced August 1. Against increase in working hours. Underminated.	285	7,125
METALS, MACHINERY AND CONVEYANCES—			
Boilermakers, shipbuilders and helpers, Montreal, Que.	Commenced August 27. Against a reduction in wages. Settled by negotiations; work resumed September 6.	300	1,200
Employees of steel and coal companies, Sydney, N.S.	Commenced November 22, 1920. For increased wages and improved working conditions. Underminated.	150	3,750
Guage men, Sydney, N.S.	Commenced June 9. In sympathy with employees of the steel and coal companies. Underminated.	16	400
Machinists, Orillia, Ont.	Commenced May 9. Employees objected to being taken off their own work and having to divide up other work. Underminated.	15	375
Sheet metal workers, Saskatoon, Sask.	Commenced June 4. Alleged violation of agreement by employers. Information received indicates this strike terminated during August.		
PRINTING AND PUBLISHING—			
Compositors, Montreal, Que.	Commenced June 14. Objection of men to perform work that came from shop were strike existed. Underminated.	25	625
Compositors, etc., Vancouver, B.C.	Commenced May 2. For increased wages and 44-hour week. Underminated.	57	1,425
Photo engravers, Montreal, Que.	Commenced May 2. For shorter hours. Underminated.	63	1,575
Photo engravers, Ottawa, Ont.	Commenced June 1. For increased wages and 44-hour week. Underminated.	13	325
Printers, Montreal, Que.	Commenced July 1. For increased wages and 44-hour week. Underminated.	450	11,250
Printers, Ottawa, Ont.	Commenced June 1. For increased wages and 44-hour week. Underminated.	163	4,075
Printers, Toronto, Ont.	Commenced June 1. For increased wages and 44-hour week. Underminated.	862	21,550
Printers, Winnipeg, Man.	Commenced July 1. Alleged lockout when employees were refused a renewal of agreement. Underminated.	220	5,500
Printers, bookbinders and pressmen, Halifax, N.S.	Commenced May 2. For shorter hours. Underminated.	45	1,125
PRINTING AND PUBLISHING.—Continued.			
Typesetters, pressmen and bookbinders, Hamilton, Ont.	Commenced May 2. Alleged violation of agreement by employers. Underminated.	45	1,125
CLOTHING—			
Tailors, Winnipeg, Man.	Commenced July 15. Against a reduction in wages; employees alleged a violation of agreement, followed by a lockout. Settled by negotiations; work resumed September 22.	175	2,975

STRIKES AND LOCKOUTS DURING SEPTEMBER, 1921—*Continued.*

Industry or Occupation.	Particulars.	No. of employees affected.	Time loss in working days.
FOODS, LIQUORS AND TOBACCO— Cigarmakers, Vancouver, B.C.....	Commenced May 31. Against introduction of new machinery. Un-terminated.	20	500
LEATHER— Shoeworkers, Galt, Ont.....	Commenced July 7. Against reduction in wages. Settled by negotiations; work resumed September 10.	10	80
TRANSPORTATION— Street railway employees, St. John, N.B.....	Commenced June 29. In protest against reduction in wages and certain working conditions. Men still on strike, but company claimed their places were filled.
Scowmen and lumber handlers, St. John, N.B.	Commenced June 22. Against reduction in wages. Information received indicates this strike terminated during August.
Strikes commencing during September, 1921			
LUMBERING— Sawyers and packers, Vancouver lower mainland, B.C.	Commenced September 16. Against a reduction in wages. Settled by negotiations; work resumed September 26.	450	3,600
TRANSPORTATION— Teamsters, Edmonton, Alta.....	Commenced September 1. For shorter hours. Settled by mediation; work resumed September 3.	100	200
MISCELLANEOUS— Musicians, Calgary, Alta.....	Commenced September 5. Against a reduction in wages. Settled by mediation of Department of Labour; work resumed September 9.	36	180
Musicians, Ottawa, Ont.....	Commenced September 1. Against a reduction in wages. Settled by negotiations; work resumed September 5.	35	140

an approximate time loss of 48,575 working days.

CLOTHING.—The strike of 175 clothing workers at Winnipeg in protest against a 10 per cent wage reduction, which commenced on July 15, terminated on September 22, with the workers resuming employment at a 5 per cent reduction.

TRANSPORTATION.—One hundred teamsters in Edmonton struck on September 1, in protest against a longer working week. The particular objection was that of working Saturday afternoons at straight time. After a duration of two days, the trouble was settled on the basis of time and a half payment (with certain exceptions) for work on Saturday afternoons. No settlement of the strike of street railway employees at St. John was reported

by the men's union, but the Company claimed that the places of the strikers' had been filled.

MISCELLANEOUS.—Thirty-five musicians and motion picture operators in three Calgary theatres struck for a renewal of the 1920 wage agreements. The theatre managements had announced a reduction in wages. The strike was settled by the mediation of an official of the Department of Labour, and the musicians resumed work at the previous wage rate but with an additional half hour to the working day. The operators also resumed work, and agreed to arbitration, as yet in abeyance. In Ottawa, there was also a somewhat similar situation. The employers wished to make a wage reduction of 15 per cent, and after a few days, work was resumed on the basis of a 10 per cent reduction.

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING AUGUST, 1921

THE following details with regard to strikes and lockouts in the United Kingdom during August, 1921, based on returns from employers and workpeople, are taken from the September issue of the British *Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in August, was 62, as compared with 40 in the previous month and 139 in August, 1920. In these new disputes about 15,000 workpeople were directly involved, and 1,000 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred though not themselves parties to the disputes). In addition to the numbers involved in new disputes, nearly 10,000 workpeople were involved, either directly or indirectly, in 43 other disputes which began before August and were still in progress at the beginning of that month. The total number of new and old disputes in progress in August was thus 105, involving about 26,000 workpeople, and resulting in a loss during August of over 200,000 working days.

CAUSES.—Of the 62 new disputes, 34, directly involving nearly 8,000 workpeople, arose out of proposed reductions in wages; 17, directly involving about 5,000 workpeople, on other wages questions; 6, directly involving about 1,000 workpeople, on questions respecting the employment of particular classes or persons; and 5, directly involving about 1,000 workpeople, on other questions.

RESULTS.—The dispute involving joiners and carpenters in shipyards throughout Great Britain, which began on December 1, 1920, was settled during the month, a compromise being reached. In addition, settlements were effected in the case of 32 new disputes, directly involving about 10,000 workpeople, and 19 old disputes, directly involving about 5,000 workpeople. Of these 51 disputes, 5, directly involving about 1,000 workpeople, were settled in favour of the workpeople; 22, directly involving nearly 5,000 workpeople, in favour of the employers; and 24, directly involving over 9,000 workpeople, were compromised. In the case of 7 disputes, directly involving nearly 3,000 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades:

Groups of Trades	Number of Disputes			Number of workpeople involved in all disputes in progress in August.	Aggregate duration in working days of all disputes in progress in August.
	Started before August 1.	Started in August.	Total.		
Building.....	8	13	21	4,000	30,000
Mining and Quarrying.....	6	11	17	7,000	23,000
Metal, Engineering and Shipbuilding.....	19	9	28	7,000	101,000
Other trades.....	10	29	39	8,000	59,000
Total, August, 1921.	43	62	105	26,000	213,000
Total, July, 1921....	54	40	94	1,127,000	6,327,000*
Total, August, 1920.	123	139	262	86,000	885,000

*Inclusive of days lost at collieries in July, subsequent to the date of settlement of the national dispute, in consequence of delays in restarting.

ANNUAL CONVENTION OF THE CANADIAN FEDERATION OF LABOUR

THE thirteenth annual convention of the Canadian Federation of Labour was held in Montreal from September 12 to 14, with twenty delegates present representing 10 affiliated unions. The Hon. A. Galipeault, Minister of Public Works and Labour for Quebec, who was expected to be present at the opening session, wrote apologizing for not being able to attend the convention. Mr. M. F. Tumpane, the president, presented a report dealing with the activities of the executive officers during the past year and called attention to some matters which he believed worthy of consideration by the delegates. The closing remarks of the president suggested that the convention make a special request to the Committee on Law with a view to evolving a constitution that will enable the Federation to assimilate the many diverging interests of the various classes of organized workers not connected with international organizations. With this accomplished it was felt that there are many unions who would throw off their international allegiance and unite with the Federation. The president also referred to the work of the federation being hampered by lack of funds, even at the present per capita tax of 10c. He added that the Executive Board recommended that the Committee on Law should seriously consider if a reduced per capita tax would be an inducement to bring accessions in such numbers as to place the organization on a firm footing.

The former secretary, Mr. Chas. E. Clay, of Toronto, resigned his position on July 5, 1921. He was succeeded by Mr. Bertram E. East of Toronto, who submitted a report stating that nine charters had been issued during the year. The financial statement showed total receipts of \$2,520; the expenditures totalled \$2,186; the balance on hand, including \$10 from profit and loss account, was \$344. The unions reported to be in affiliation numbered 30, but the membership was not stated.

Among the resolutions adopted dealing with internal affairs were the following: (1) that the annual report of the conventions and the constitution and by-laws of the Canadian Federation be printed in both English and French; (2) instructing the executive board to find ways and means of publishing a weekly newspaper; (3) authorizing the Executive Board to publish a yearly convention souvenir book and also to appoint a temporary organizer.

A resolution was approved asking that the Canadian Federation of Labour appeal to all affiliated locals for financial and moral support to the Toronto Press Assistants' Union to assist in carrying to a successful conclusion the fight now being waged against the open shop.

Endorsation was given a resolution protesting against the merging of the banking business and requesting the Minister of Finance to refuse to sanction the amalgamation of banks except for very important reasons.

It was also decided that representation be made to the Dominion Government and to the Alberta Legislature protesting against the present system in the Alberta mining districts whereby the miners contribute their dues through the operators to the United Mine Workers.

Congratulations were extended to the Canadian Brotherhood of Railway Employees on their expulsion from the Trades and Labour Congress of Canada. It was resolved that the Executive Board should interview the General President of the Canadian Brotherhood on the question of securing its affiliation with the Canadian Federation of Labour.

Resolutions as follows were also approved (1) requesting that the Canadian Federation be given recognition in appointments by the various governments to the different commissions and public bodies; (2) that the Canadian Federation of Labour as representing

the viewpoint of the Canadian workers ally itself with the British and other national trades union bodies, and that the Executive Board take the necessary steps to this end.

Officers for the year 1921-22 were elected as follows: President, M. F. Tumpane, Toronto; 1st Vice-Pres., R.

Giroux, Quebec; 2nd Vice-Pres., F. Hudson, Toronto; 3rd Vice-Pres., T. J. Baerd, Toronto; 4th Vice-Pres., J. Finnie, Montreal; Sec.-Treas., J. T. Gunn, Toronto.

The place and date of the next convention was left in the hands of the Executive Board.

FOURTH CONVENTION OF NATIONAL AND CATHOLIC UNIONS

Synopsis of Proceedings at which Constitution for Confederation of Catholic Workers was adopted

THE fourth convention of the National and Catholic Unions was held in Hull, Que., from September 24 to 28. The opening sessions on the 24th were held in the hall of the Hull Catholic Workmen's Association, at which the registration of delegates took place and the various reports of officers were presented. The president, Mr. Gaudiase Hébert, of Quebec, tendered his resignation, which was accepted, owing to his recent appointment to the position of factory inspector by the Quebec Government. Mr. Achille Morin, of Hull, one of the vice-presidents, was appointed presiding officer. On Sunday morning the delegates attended mass at Notre Dame Church, and at noon were entertained at dinner in Notre Dame Hall by the municipal authorities. At 2.30 on Sunday the delegates were welcomed to the city by Mayor Louis Cousineau. Abbé J. A. Carrière welcomed the delegates on behalf of the clergy. In the evening a session was held at which the general chaplain, Abbé Maxime Fortin, of Quebec, presented the report of the executive officers with reference to the request made in March last to the federal Minister of Labour for representation at the conference of building trades employers and employees to be held in Ottawa in May. The chaplain stated that the executive had advanced the following claims: (1) That the right of Catholic

workers to be represented on commissions appointed by the Government, be recognized, and (2) that of the thirty Catholic delegates invited to the above-mentioned conference three should be members of Catholic unions. Father Fortin referred to the discussion in the House of Commons, in the course of which the Prime Minister in reply to Mr. E. Lapointe, M.P., had explained the position of the Minister of Labour with reference to the claims presented. The report was sent to committee.

To fill the vacancy on the executive caused by the retirement of Mr. Hébert, Mr. J. E. Belanger, of Quebec, was elected a vice-president.

On Monday, the 26th, the delegates met in the hall of the Hull Association, where the remaining sessions of the convention were held. The credential committee reported certificates received from 89 unions, three of which were from Ontario, the remainder being from bodies located in Quebec. The names of delegates recorded were 224, but a number of them represented two, and in some cases, three unions, the actual number of delegates being approximately 200, of which 13 were women from the Hull Association. Fifteen chaplains from various localities were also present, as well as Mr. Simon Lapointe, of Quebec, the legal advisor. With each of the committees which

were appointed a chaplain was associated.

At this session a telegram was read from Cardinal Gasparri conveying the apostolic benediction of the Pope on the convention. Letters were read from the Prime Minister, the Right Honourable Arthur Meighen, and from the Provincial Prime Minister, the Honourable L. A. Taschereau, regretting their inability to be present.

The retiring president, Mr. G. Hébert, presented a report of his activities since the last convention, and for his services he was voted the sum of \$100. Mr. J. E. A. Pin, the secretary, reported on the many matters which had engaged his attention, as well as on the progress of the Catholic union movement. The convention voted him an honorarium of \$150. The report of the treasurer, Mr. J. B. Beaudoin, stated that the receipts, including the balance from last year, were \$1,038.44; after paying all expenses there was a balance of cash in hand of \$518.42. The membership of the Catholic unions was approximately 45,000, although the receipts were not in harmony with these figures. A proposal was made to vote the treasurer \$100, but he refused to accept any payment for his services.

A report from the Hull Catholic Workingmen's Association stated that much progress had been made in that locality. The property now in possession of the association had been donated by the Oblate Fathers. Large additions had been made to the buildings, providing meeting and recreation rooms.

CONSTITUTION ADOPTED.

At the 1920 conference of the National and Catholic Unions it was proposed that the executive officers should submit to the 1921 conference a constitution and by-laws on which to base a permanent organization. The executive officers accordingly submitted to the conference a draft constitution, and by-laws to govern the proposed federation of Catholic Unions. The draft was read and various suggestions made by

the delegates, all of which were referred to a special committee. When the committee was being nominated objection was raised to the delegates from the St. Jean Baptiste Society, of Hawkesbury, on the ground that it is a fraternal society and their admission might create a precedent. It was explained that the delegates were admitted on the promise that they would organize as Catholic Syndicates. At a later session the special committee on constitution reported and suggested that the name of the organization should be "Confederation of Catholic Workers of Canada." The principles of the Confederation were left to be decided by the religious authorities. The remaining sections of the proposed constitution were in the main adopted with little discussion. The question of the location of the headquarters created a very interesting discussion, the city of Quebec being recommended by the committee and Montreal also being placed in nomination. A secret ballot was taken, Quebec being chosen by a vote of 117 as against 96 for Montreal. The draft constitution contained provisions for calling strikes and for the payment of strike benefits. These were referred to the executive for consideration. The constitution was finally adopted as amended, and is to come into effect on January 1, 1922, when the tentative federation which has existed for the past four years will be superseded by the new confederation. Just previous to the adjournment of the convention a delegate gave notice of motion that next year he would move that the headquarters of the confederation be located in Montreal. The question of incorporation of the Confederation was introduced during the consideration of a resolution asking that the syndicates which have contracts with employers regarding the closed shop endeavour to have said contracts respected. In discussing incorporation both the general chaplain and the legal advisor expressed themselves as against the proposal, the former remarking that at the present time it was inopportune and stating that propaganda on

the subject for four or five years would be necessary before seeking incorporation.

THE STATUS OF WOMEN.

In the report of the executive officers it was suggested that women members should be given representation and allowed on committees at conventions only on very special occasions. The report of the committee approved of the suggestion of the executive. This question was before the convention on two occasions and much discussion ensued. A proposal was made that women should be accorded the same status as men. An amendment was moved that the question be deferred to the next convention. It was finally decided to refer the whole question of the status of women to a committee of three chaplains to consider (1) the general problem of the organization of women, and (2) the special problem of representation of women at conventions. The committee is to report in three months and the decision is to be final.

RESOLUTIONS SUBMITTED.

Among the resolutions presented were twelve which had been referred by the 1920 convention to the Hull meeting and some 63 others, all of which were referred to the committee on Resolutions for report. In a few instances the committee recommended the cancellation of certain resolutions, their recommendation being adopted without dissent. One of the resolutions cancelled asked for a revision of the tariff. A resolution presented asking that federal and provincial governments be requested to fix a set date for general elections was promptly declared out of order by the presiding officer on the ground that it was of a political nature. Two resolutions asking for the enactment of a legal working day for all workers, which was referred from the 1920 convention, were again deferred to be considered in 1922. Similar action was taken concerning a resolution asking that public utility companies be compelled to establish pension funds for old employees. A

resolution in favour of pensions for widows was also left over for the next convention.

To the executive officers was referred the question of a button for the members of the Catholic unions, as was also proposals (1) that organizers be appointed to organize syndicates in the various localities, (2) that the executive take active measures to organize the journeymen barbers with a view of forming a barbers' federation, (3) that the National and Catholic co-operative societies be formed into a federation, (4) that the executive devise means of organizing the employees in the clothing industry in National and Catholic syndicates and that efforts also be made to organize the bakers in the province of Quebec.

Two resolutions in reference to apprenticeship were referred to the general chaplain to be presented some time in the future.

UNEMPLOYMENT.

A resolution on unemployment was sent to the committee on Resolutions who submitted a substitute, which the convention adopted and of which the following is a summary:

That the federal and provincial governments and municipal authorities undertake not only immediate necessary work but useful public work.

That the federal government amend the Housing Act, in order to make possible a greater activity in construction.

That the millions voted be at once used in future colonization centres.

That capitalists invest in industrial undertakings.

That manufacturers discontinue bringing agricultural labour into the cities and towns, and that they work with labour unions instead of being hostile to them.

That members of Catholic syndicates cease the practice of some working full time while the others are without any work.

That employers' associations, labour syndicates, and others endeavour to prevent unemployment either by creating funds to which employees and employers shall contribute, or by making public authorities subsidize existing charitable institutions, such as the St. Vincent de Paul Society or others.

WANT PRIVATE EMPLOYMENT BUREAUS ABOLISHED.

A resolution was presented asking that a committee of five members be authorized to make an investigation into the administration of Government employment bureaus. The Resolution committee presented in lieu of the resolution a recommendation that the Provincial Government be requested to abolish all private employment bureaus. During the discussion it was pointed out that the LABOUR GAZETTE, published by the Department of Labour, furnishes every month all the information available on the work of the Government-operated employment bureaus. It was also stated that the aim of the confederation is to have an exclusive bureau for the local Catholic syndicates. The recommendation of the committee was adopted.

DESIRE HOLIDAYS RESTORED.

A resolution was adopted asking the Dominion Government to include in the Lord's Day Act, as in the past the following six holidays: The Circumcision, Epiphany, Ascension, All Saints, Immaculate Conception, and Christmas. During the consideration of this resolution a Capuchin father stated that the Bishop had forbidden the workers labouring on these holidays, with the result that at Three Rivers about 600 men who did not go to work on one of these holidays were locked out. Now the employees are compelled to work on all but three Catholic holidays. It was decided that a copy of the above request be sent to all members of Parliament.

A resolution was also adopted asking that the Quebec Government make June 24 (St. Jean Baptiste Day) a statutory holiday.

WANT NEUTRAL POSTAGE STAMPS.

The convention went on record as in favour of what was termed "neutral" postage stamps by adopting the following resolution:

Considering that according to the laws of the country French and English are the official languages:

Considering that the Canadian postage stamp is in English only;

Considering that it is difficult to have a bilingual stamp;

Be it resolved that demand be made to Federal Government for a neutral stamp, on which only the figures, the year and the word Canada would appear with his Majesty's photograph and a Maple Leaf as a background.

DEFER DEMAND FOR PROPORTIONAL REPRESENTATION.

A resolution asking that the proportional system of voting be adopted in the Dominion and provincial general elections was sent to the resolutions committee for report. The committee, while not opposing proportional representation, suggested that the executive should discontinue its demands on the Government for the new method of elections until an easier and more practical method of application had been discovered.

OPPOSED TO CERTAIN MUNICIPAL EM- PLOYEES GOING ON STRIKE.

Two resolutions were presented to the question of firemen, policemen and waterworks employees going on strike. The Resolutions Committee submitted a substitute resolution as follows:

Considering that firemen, policemen, and waterworks employees have in their protection the life and property of the people, the convention maintains that such employees have no right to strike, but the convention also contends that the various municipalities have no right to force a lockout.

After some discussion the recommendation of the committee was adopted.

OTHER RESOLUTIONS APPROVED.

Two resolutions opposing daylight saving were adopted, as was also a demand that the products of asbestos should be manufactured in Canada.

Two resolutions in reference to compensation for accidents were combined and amended by the resolutions com-

mittee. The amended resolution, which was adopted, was as follows:

That the Provincial Government be requested to amend the Workmen's Compensation Act to provide for (1) compensation for all paid employees, and (2) that the employer shall be responsible for all permanent or temporary disability to employees who have been injured in the discharge of their duties.

It was also decided to make demand for compensation for first day's disability and for other improvements in the compensation law.

It was decided to ask the Provincial Government to pass a law prohibiting the employment in stores of girls under 16 years of age, and also that a demand be made for the closing of stores not later than 6 p.m.

The following resolutions dealing with the subjects indicated were also adopted by the convention:

Requesting that the Provincial Government endeavour to prevent farmers from coming to live in the cities by using every means to make farming more agreeable and lucrative and to encourage the development of industry in the rural districts.

Opposition to dance halls being open after 12 p.m.

Asking that a law be passed prohibiting night theatres (performances which commence after 11 p.m.).

Asking that the Government enact a law compelling the publication of the names of proprietors and shareholders of newspaper companies and also those of the writers.

Asking for the prohibition of children under 16 years of age attending moving picture houses, even when accompanied by parents.

Asking that sanitary laws be enforced in textile factories.

Asking that electric railways be brought under the same law as steam railroads in the matter of working hours.

Asking that the Quebec Government appoint provincial and municipal fair wage officers with duties similar to the Dominion fair wage officers.

In favour of plumbers being examined and licensed before undertaking work and that they be given incorporation as a body.

Asking that all old paper be removed and all kalsomine, alabastine or other water colours be washed off before decorating any building.

Asking that all ladders and scaffoldings employed by painters on the outside of buildings be inspected.

Asking the provincial government to make an investigation as to overtime in the carriage and automobile trade.

Asking the competent authorities to take any measures they may think suitable to enforce sufficient ventilation in automobile repair shops or industrial plants.

Asking municipalities to appoint boards to fix fair wage rates every year.

Asking the Canadian Government to suspend all immigration for at least three years in order to protect the Canadian unemployed.

Asking for the inspection of barber shops and a better observance of the regulations of the Board of Health, and also that law be amended so that municipalities may legally order the closing of barber shops at 7 p.m., except Saturdays, when they should close at 11 p.m.

Asking that the law concerning stationary engineers of the province of Quebec be amended so that first and second class engineers may be able to instal and repair electrical apparatus in factories where they are employed, and that the regulations of stationary engineers be better observed, and also that other desired amendments be made to laws governing stationary engineers.

Asking that health regulations be better observed in stores in the matter of ventilation, and also that employers provide seats for women and girls employed as clerks in stores.

Asking the provincial minister of labour for the province of Quebec to revise the questionnaire for the examination necessary for the granting of certificates to engineers and firemen, and that candidates be given a chance to prove their practical knowledge.

Asking the government of the province to have the Board of Health use all means at its disposal to eliminate bad odors from pulp and paper mills.

Asking the directors of technical schools to adapt them to the mentality of the province and to put them on a frankly Catholic basis, with as many Canadian teachers as possible.

Against the "Act to establish the Quebec Public Assistance Service" and asking that the same be reconsidered and amended.

Asking that "casual" life and fire insurance agents be subjected to the same tax as the regular agents.

Asking the government to appoint inspectors in sufficient number to enforce the "Industrial Plants Act."

Urging the provincial board of health to have bakery shops inspected, and that the sanitary regulations be better observed therein.

Asking the provincial government of Quebec to so amend the Industrial Accidents Act that the employer may be held responsible for any permanent or temporary disability having for its primary cause the work of the employee so disabled.

Urging the government of the province of Quebec to change the date of moving day and to

fix the month of July as the legal date for the expiration of leases in Montreal.

Urging the government to enact a law prohibiting the employment in breweries of girls and boys under sixteen years of age.

THE OFFICERS ELECTED

Just previous to the election of officers thanks were tendered to Archbishop Gauthier of Ottawa for his pastoral letter in favour of the union of Catholic

workers; to the executive committee; and to those who had contributed to the success of the convention.

The following were elected as the officers for the current year: President: Chevalier Pierre Beaulle, Quebec; Vice-President: J. A. Morin, Hull; Secretary: J. H. A. Poirier, Quebec; Treasurer: J. B. Beaudoin, Montreal. Montreal was chosen as the convention city for 1922.

CONVENTION OF THE CANADIAN BROTHERHOOD OF RAILROAD EMPLOYEES

THE eleventh convention of the Canadian Brotherhood of Railroad Employees was held at Winnipeg, August 29 to September 1, under the chairmanship of the Grand President, Mr. A. R. Mosher. The delegates were officially welcomed and entertained by the Mayor and City Council of Winnipeg.

The Grand President in his opening address stated that the Brotherhood had not as yet been seriously affected by unemployment. He said that unemployment was a condition brought about by errors in our present economic system which could and should be corrected by a process of evolution. "Revolutionary forces," he said, "may very conceivably replace the forces of evolution in an attempt at improvement, but I, for one, should regret exceedingly to see our people involved in a civil war when by rational methods the desired changes might well be made effective." He enjoined the employees of the National Railways to give conscientious and whole-hearted service and to do everything in their power to advance the interest of the railways.

In the report of the Grand Secretary-Treasurer, the financial statement covering the period from September 1, 1919, to April 30, 1921, showed a revenue of \$77,497, and an expenditure of \$66,316. The report of the membership showed that from September 1, 1919, to July 31, 1921, there had been an increase of

2,228 members, the paid-up membership on the latter date being 13,194, distributed over 139 local divisions.

A discussion arose regarding the replacement of death benefits by insurance, and it was recommended that the incoming executive arrange for life and disability insurance to be optional to present members of the Brotherhood, but compulsory to those joining after January 1, 1922. The question of establishing an insurance department to handle this plan or of working through an established life insurance company was left to the executive.

With regard to the Brotherhood's connection with the Trades and Labour Congress of Canada, it was recommended that the incoming executive board be given power to take the necessary action to protect all the rights and privileges in the Trades and Labour Congress of Canada. As to the matter of affiliation with the Canadian Federation of Labour, it was decided that this should be left to the discretion of the executive board. It was also decided that as soon as those local divisions situated outside of Canada were able to undertake their own government that a full measure of autonomy would be given them. All organized activities it was suggested should be confined to those railways having headquarters in Canada or Newfoundland. The stand previously taken by the Brotherhood with reference to the "no politics" order of President Hanna

of the Canadian National Railways, was strongly re-affirmed, and a memorial to the Prime Minister urging immediate action in the matter was proposed. A resolution was approved in favour of the principle of the 44-hour week.

The officers elected were: Grand President, Mr. A. R. Mosher, Ottawa; vice-president, Mr. M. Macleod, Charlottetown; secretary-treasurer, Mr. M. M. Maclean, Ottawa; also vice-presidents for the various provinces, as follows:

Nova Scotia, Wm. Allen, Halifax; Prince Edward Island, J. H. Monaghan, Charlottetown; New Brunswick, B. W. Cummings, Moncton; Quebec, George Desrosiers, Charny; Ontario, M. J. Dundas, London; Manitoba, J. W. Watson, Winnipeg; Saskatchewan, Chas. Tubb, North Battleford; Alberta, C. H. Minchin, Calgary; British Columbia, A. N. Lowes, Vancouver.

It was decided to hold the next convention at Calgary in September, 1923.

SESSION OF THE INTERNATIONAL TYPOGRAPHICAL UNION

THE sixty-sixth session of the International Typographical Union was held at Quebec, Que., on August 8-13. There were present 294 delegates. Addresses of welcome were delivered by the Hon. A. L. Taschereau, prime minister of the province of Quebec; Mayor Joseph Samson of Quebec; Hon. G. D. Robertson, minister of labour for Canada; Mr. J. E. Atkinson, representing the Canadian Newspaper Publishers' Association; Mr. C. G. Powers, M.P., Quebec South; Sir David Watson of the Quebec Chronicle; and the Hon. Frank Carrel, of the Quebec Telegraph. The chair was taken by the International president, Mr. John McParland. Other speakers included Mr. Samuel Gompers, president of the American Federation of Labour; Mr. John J. Manning, secretary-treasurer of the Union Label Department of the American Federation of Labour; Mr. Neil MacLean, Labour member of the British House of Commons; and Mr. Matthew Woll, president of the International Photo-Engravers' Union.

The report of President McParland contained an outline of the movement to secure the 44-hour week together with tables showing that 246 locals had contracts providing for the introduction of the 44-hour week or less in commercial establishments on May 1, 1921, in all but 61 cases at wage increases; that

351 locals reported increases in wage scales under contracts since June 1, 1920, and that 91 newspaper establishments were working under agreements calling for less than the 48-hour week.* Reference was also made to the arbitration agreement with the American Newspaper Publishers' Association which expires in April, 1922, and it was recommended that any future agreement proposed between the Union and the publishers be the subject of a referendum for ratification or rejection.

The report of the secretary-treasurer for the fiscal year ended May 31, 1921, showed a membership of 76,153, divided as follows: Typographical union, 70,837; German-American, 567; mailers, 2,495; newspaper writers, 252; typefounders, 10, and 1,992 holding travelling cards. There were 2,510 members in arrears. (The membership for the previous year was 74,719). The total earnings of the members was \$141,964,382 with an average per member of \$1,909, as compared with \$114,594,258 and an average of \$1,615 in the previous year. There were 730 deaths on which mor-

*In a subsequent statement by the president dated August 27, a total of 360 union branches (including 354 typographical locals representing a membership of about 28,568, and 6 mailers' locals representing a membership of about 1,002) are reported to have established the 44-hour week in their jurisdictions. Fifty-six locals have contracts extending beyond August 1, 1921, which do not contain provision for the 44-hour week; 285 locals have expired contracts the renewal of which has not been reported to headquarters; 32 locals have no contracts whatever and 23 have contracts of indefinite expiration.

tuary benefits were paid aggregating \$305,813, an average of \$405. The death rate averaged 9.8 per 1,000 as compared with the rate of 11 to 13 which had been maintained since the establishment of the death benefit in 1892. The old-age pension assessment averaged 79½ cents per member per month, with a total of \$497,512 paid out for pensions, there being 1,683 pensioners on the roll. The total receipts for the year were \$2,048,054, and the expenditures \$1,856,409. The balance in the general fund on May 31, 1921, was \$203,810; in the mortuary fund, \$830,423; and in the old age pension fund \$965,387. The Union paid in strike benefits in connection with the 44-hour dispute and in special assistance to local unions, \$383,488, to district and state typographical organizations \$5,200, and for services of representatives and expenses in performing the work of the organization \$114,691. The Union Printers' Home Fund's portion of the per capita tax was \$208,196. (There were 147 members admitted to the Home during the year.) The total receipts from Canadian unions were \$125,609, and the benefits drawn by Canadian unions amounted to \$58,509.

The Convention decided in favour of the continuance of a vigorous campaign to secure the 44-hour week, and that the 10 per cent assessment being levied for strike pay of men out of work in shops where the proposal had not been recognized be continued until conditions warrant its reduction. It also decided to give unqualified endorsement of the action of the recent convention of the American Federation of Labour relative to disarmament, government ownership of railways, its recommendations concerning the establishment of a publicity bureau at the Federation's headquarters, and especially its recommendations relating to text books for public schools; to take up with the International Allied Printing Association some plan for a persistent campaign for the union label on all printed matter; to patronize only those who make and handle union labelled products; to condemn reform organiza-

tions who are attempting to deprive workers of their rights and pleasures and self-determination in the use of tobacco; to urge local unions to use their best endeavours to have all contracts expire on October 1 of each year; to amend section 173 of the general laws to read: "Subordinate unions, in making contracts or wage agreements, shall insert a clause therein reserving to their members the right to refuse to execute all work received from or destined for struck offices, unfair employers or publications."

In regard to the arbitration agreement with the American Newspaper Publishers' Association which expires in April, 1922, a new form of agreement was submitted by the Association for the consideration of the Union. There were three main changes proposed, the most important of which was non-acceptance of International Typographical Union rules and regulations as a condition precedent to contract negotiations. It was decided that the executive council should enter into further discussion with the publishers and in the event of a basis of agreement being arrived at should submit the proposed terms to a vote of the membership for adoption or rejection. A request was made to the convention that the executive council be given the same powers for negotiating with the Canadian Newspaper Association.

ORGANIZATION OF NEWSWRITERS.

A proposed constitution for an organization of newswriters was submitted by a committee appointed by the executive council. It called for an organization to be known as the International Union of Journalists, affiliated with and under the jurisdiction of the International Typographical Union, for the objects of the cultivation of friendship and fraternal relations; the elevation of the profession; the raising of the standard of compensation; mutual assistance in trouble, sickness, destitution or unemployment; provision for death benefits and co-operation with kindred organizations; also provision for the training

of beginners. The membership should include all persons, bona-fide workers, employed in the editorial department or in gathering, writing, preparing, collecting, illustrating matter for the periodical press, other than managing editors and publishers, who have had three years' actual experience, except in cases where the local union and the persistent agree to make an exception in favour of two years. It was decided that the matter be referred back to the executive council with full power to act.

EDUCATION OF APPRENTICES.

A committee appointed to deal with the question of supplemental education for apprentices reported that there were about 2,000 apprentices and journeymen taking the Course of the International Typographical Union. They recommended that legislation be enacted binding the apprentice to take the course; that the foremen of printing establishments must from time to time report to the head of the firm the progress made by the apprentice; and that the apprentice cannot be admitted to full membership in the union until he has received his certificate of graduation showing that he has successfully completed the course. They also recommended that the International Typographical course should be extended to duly registered apprentices and union journeymen only. Their recommendations were adopted. The convention also decided to change section 63 of the general laws to read: "An apprentice term shall consist of at

least five years: Provided, That upon request of the local union and employer and with the consent of the president of the International Typographical Union, a period of time not to exceed six months may be deducted from the five year apprenticeship term (after an apprentice has satisfactorily completed the I. T. U. Lessons in Printing, or such other courses of instruction in printing as may be required by the local contract. *Beginning with the third year apprentices shall be enrolled in and complete the I.T.U. Course of Lessons in Printing before being admitted as journeymen members of the union. They shall pay to the secretary-treasurer of the local union having jurisdiction the sum of — per week until the full tuition of the course is paid. No office shall be entitled to employ an apprentice unless it has the equipment necessary to enable instruction being given the apprentice in the several classes of work agreed upon in the contract with the employer to be taught each year: Provided, That any local union maintaining a school embracing the existing I.T.U. Course prior to the adoption of this law will be deemed in compliance with the law."*

A resolution to establish a bank at the headquarters, Indianapolis, Ind., was referred to the executive council. (See page 1292 in this issue). The convention also favoured the amalgamation of the various printing trade unions, to the end that there be but one union in the printing industry.

Atlantic City was chosen for the convention in 1922.

TENTH CONGRESS OF THE INTERNATIONAL CO-OPERATIVE ALLIANCE

THE tenth congress of the International Co-operative Alliance met at Basle, Switzerland, on August 21-25, the ninth congress having been held at Glasgow in 1913. The congress was attended by about four hundred representatives of co-operative societies with an estimated membership of twenty-seven millions in twenty-three countries.

The most important business of the Congress was the adoption of steps toward the formation of an international co-operative society and the revision of the constitution. A report was presented by the Central Committee on the work of the International Co-operative Alliance since the Glasgow Congress. The report contained an

account of the steps taken to convene a meeting of representatives of the affiliated wholesale societies to promote arrangements for international co-operative trading with the ultimate object of establishing an international wholesale society. The Central Committee recommended the adoption of proposals made by a sub-committee appointed by it to study the question. These proposals comprised the concentration of all co-operative effort in each country so as to form one body with which co-operative wholesale societies in other countries might do business; the extension of an invitation to each wholesale society to form an export department; the joint purchase of articles when it can be done with advantage, and the organization of a central bureau for the collection of statistics and the circulation of information to be established under the English Co-operative Wholesale Society in Manchester.

After some discussion a resolution submitted by the English Women's Co-operative Guild was adopted by the Congress, recommending the International Committee of Co-operative Wholesale Societies to take steps at once to assist each country to utilize all available resources to build up an export trade through co-operative channels by encouraging the purchase of goods through the co-operative movements of each country and by helping to organize the marketing of goods so exported.

The discussion on this resolution brought out the fact that various steps in international co-operative trading had already been taken. The English Co-operative Wholesale Society had established an export department with an officer giving his whole time to this branch of the business, and had advanced credits to the extent of £800,000 to promote international trading. It had also concluded an arrangement for international co-operative banking by agreement with the Andelsbank in Copenhagen. The co-operative organizations in Denmark, Norway and Sweden combined some time ago to form the Scandinavian Wholesale So-

ciety, and in 1920 the Italian co-operative organization entered into a trade agreement with the "Centrosovus" of Moscow.

The portion of the report of the Central Committee dealing with the revision of the rules of the International Co-operative Alliance was adopted without discussion. In the new rules the International Co-operative Alliance is defined as follows: "An international association formed of National Unions or National Federations of Co-operative Societies; National Federations of Co-operative Unions; Regional Unions or Regional Federations of Co-operative Societies; Co-operative Societies and recognized National auxiliary organizations of the affiliated National Unions or Federations having national dimensions." In the sense of this article the rules define the following as co-operative societies: 1. Consumers' co-operative societies which conform to the principles of Rochdale, particularly as to (a) The equal right of voting of all the members irrespective of, or without regard to the amount of shares held by each; (b) The distribution of the surplus, apart from the limited interest on shares, either amongst the members in proportion to their purchases, or carried to collective reserve funds or allocated to works of education and solidarity. 2. All other associations of persons that have for their object the social and economic amelioration of their members, by the promotion of undertakings on the basis of mutual aid and self-help, and which in practice observe the principles established by the rules of I.C.A. and the resolutions of its congresses.

The congress was addressed by Lieutenant-Colonel Schuster of the International Credits Department of the League of Nations, who explained the Ter Meulen system of international credits which had been adopted by the League of Nations. A small international commission appointed by the League would assess the gold value of such assets as any nation would wish to pledge and would authorize the issue of Ter Meulen bonds to that amount.

He said that productive co-operative societies could use these bonds in order to obtain raw materials.

A resolution concerning the policy of international co-operation submitted by M. Albert Thomas of France, was unanimously approved - after he had made certain amendments to it. This resolution denounced competition and war in all their forms, and declared that the object of the co-operative movement was association between all nations. It declared that commercial treaties should be multiplied and should be renewed for a sufficiently long period to assure the sound development of industry. It associated itself with the proposals made to the League of Nations concerning the establishment of regulation of the condition of a just distribution of foodstuffs and the institution of control over international monopolies and trusts. The hope was expressed that the economic and finance committee of the League of Nations might set up an International Statistical office for collection and publication of information concerning production, supplies and requirements in various countries. The resolution concluded as follows: "Finally the Congress is convinced that commercial relations between the co-operative organizations of various countries will not only serve the general good by eliminating middlemen's profits; but will also lay a strong foundation for a world economic system in which the spirit of strife and competition would have no place. For this purpose it recommends the establishment of direct relations, as between country and country and within each country, between

organized consumers and agricultural producers' organizations, and it counts on the central organization of the International Co-operative Alliance to unite all the co-operative organizations of the whole world."

A paper was read by Herr Kaufmann of Germany recommending the formation of a Union of Co-operative Wholesale Societies registered in the United Kingdom as a step toward the ultimate formation of an international wholesale society. The proposals were approved by resolution of the Congress which pledged itself to do all in its power to promote them further, and referred them to the committee of the National Wholesale Societies.

Mr. C. J. Goedhart, president of the Netherlands Co-operative Union was elected president of the Alliance in succession to Sir William Maxwell. The members of the Central Committee of the Alliance were elected under the new rules. The national organizations of the various countries have the following representation on it:—England, 7 members; Germany, France and Italy, 4 each; Finland and Czecho-Slovakia, 3 each; Austria, Russia, Sweden and Switzerland, 2 each; Armenia, Belgium, Denmark, Georgia, Hungary, Lapland, Lithuania, Netherlands, Norway, Holland, Roumania, Servia, Ukraine and the United States, one each. The Central Committee may appoint additional members representing organizations in other countries as soon as such organizations are formed on a national basis and have paid their minimum subscription as provided in the rules of the Alliance.

BRITISH TRADES UNION CONGRESS

Synopsis of Proceedings of the Fifty-third Annual Convention at Cardiff

THE fifty-third annual convention of the British Trades Union Congress was held at Cardiff, Wales, from September 5 to 10, with 955 delegates in attendance, representing 170 organizations, with a membership of 6,389,123.

The number of organizations represented showed a considerable decline, due to amalgamation, while the total membership also showed a decline, amounting to 1.6 per cent, chiefly owing to a decline in the membership of General Labour

Unions. Mr. E. L. Poulton, O.B.E., J.P., chairman of the Parliamentary Committee, and a member of the boot and shoe operatives' union, presided over the Congress.

NATIONAL JOINT COUNCIL.

It will be remembered that a scheme for setting up a General Council of the Trades Union Congress, to supersede the existing Parliamentary Committee, was approved at the 1920 convention of the Congress. The main objects of the new General Council are to promote common action on the part of trade unions, to defend attacks on vital principles of trade unionism, and to enter into relations with kindred movements in other countries.

The present Congress extended the principle of common action by approving the constitution of a National Joint Council, a body representing the new General Council of the Trade Union Congress, the Executive Committee of the Labour Party, and the Parliamentary Party. The main function of this National Joint Council will be to co-ordinate the action and policies of the Labour Party and the Trades Union Congress. This Council, plans for which were ratified by the Labour Party at its convention at Brighton last June, will consist of a chairman, a secretary, and three other members each of the three bodies. It will consider all questions affecting the labour movement as a whole and make provision for taking immediate and united action on all questions of national emergency; endeavour to secure a common policy of action, whether by legislation or otherwise, on all questions affecting the workers as producers, consumers and citizens; consult when necessary a joint conference consisting of the General Council of the Trades Union Congress and the Labour Party Executive, together with a number of Parliamentary members, which, with the Labour Party Executive, will be equal in number to the members of the General Council of the Trades Union Congress; and present an annual report to the Trades Union

Congress, the Labour Party Conference and the Parliamentary Party. The chairman of the General Council of the Trades Union Congress will also be the chairman of the National Joint Council, and the secretary of the Labour Party will act as its secretary. The expense incurred by the Council will be met in equal proportions, by the General Council of the Trades Union Congress, and the Executive Committee of the Labour Party. It is proposed that the General Council will have under its control, when fully organized, four departments: 1. A department of research and information, which will include a library of books and documents, and will be responsible for setting up and maintaining advisory committees on economic, social and political problems; 2. An international department, responsible for collecting and publishing information about international affairs; 3. A publicity department, responsible for the supply of information to the newspapers, and the publication of journals, pamphlets, and other literature; 4. A legal department, responsible for preparing parliamentary bills and giving legal information and advice.

A proposal by the Parliamentary Committee to appoint a full-time chairman of the Council, was withdrawn.

The demand for an inquiry into the failure of the Triple Alliance to act during the recent coal mining dispute was withdrawn, on the ground that the new General Council would be in a position to take action upon such matters in the future.

A resolution designed to secure that in the event of a dispute affecting a particular union there should be a general consultation of the whole labour movement before declaring a strike, was defeated, the opinion of many delegates being that such consultation would result in dangerous delays. Quickness of action, it was declared, was often essential to success.

UNEMPLOYMENT.

Prominent among the subjects discussed by the Congress was the unemployment problem, which was specially

urgent owing to its wide prevalence, and also because of the situation in the metropolitan borough of Poplar. Many of the councillors of this borough had been committed to prison as a result of their efforts to secure equalization of rates throughout London, having refused to levy certain rates within the borough as ordered by the London County Council, on the ground that such a levy would throw a disproportionate burden upon the ratepayers of the borough in comparison with that carried by wealthier boroughs. In this connection the following emergency resolution was passed unanimously:

The Trades Union Congress assembled at Cardiff and representing over six millions of British workers, views with great apprehension the increasing extent and conditions of unemployment, and re-affirms the principle that it is the duty of the State to provide work or adequate maintenance for every willing worker; approves the action of those boards of guardians which, in the absence of proper government assistance, have made a serious endeavour to adequately relieve the urgent necessities of the workless, but emphatically expresses its opinion that such a burden, mainly due to the war, should not have been imposed on the ratepayers and must be removed from them. The Congress calls upon the Government immediately to summon Parliament, and to introduce practical schemes of work without delay, with the necessary financial provision; and further, to remove the gross inequalities of rating obtaining in the London area. The Congress also is of opinion that the Poplar Councillors, in the stand which they believe to be best to take, under the exceptional circumstances, to call public attention to the distressful conditions of the unemployed, have rendered a real national service. It pledges itself to use all the strength at its command to secure the provision of work or adequate maintenance for the unemployed workers throughout the country, and instructs the new general council in close co-operation with the National Executive of the Labour Party and the Parliamentary Labour Party, immediately to take such steps as may be necessary to secure these objects.

AN EDUCATIONAL SCHEME.

The Congress declared that the time had arrived when the trade union movement should consider the best means of providing for the educational needs of its members, and that the recommendations of the Trade Union Education Inquiry Committee on educational

facilities for trade unionists, afforded a basis for the best educational scheme. The General Council was instructed to consult with this committee as to the best means of giving effect to its program, including the maintenance of the Central Labour College, Ruskin College, and other existing trade union colleges. It was also resolved that every child ought to have free access to secondary education, irrespective of passing a qualifying examination.

APPRENTICES.

A resolution was passed urging that apprentices in all trades should be apprenticed to the unions, and not to the employers.

HOURS OF SEAMEN.

Resolutions were carried demanding a 48-hour week for seamen; that the Hours of Employment Bill, 1921, should be immediately proceeded with; and supporting the seamen in their endeavour to delete from the Merchant Shipping Act all clauses penalizing seamen in respect of illness abroad, stoppage of wages, fines, forfeiture and imprisonment abroad, and demanding in view of the alarming increase of tuberculosis among seamen, an inquiry into the living accommodation and medical treatment provided aboard ship.

NATIONAL SUPERANNUATION SCHEME.

The General Council was instructed to draft a scheme for the establishment of a national superannuation scheme for full-time employees of affiliated trade unions.

GENERAL MINIMUM WAGE.

A resolution introduced by the Miners' Federation was approved by the Congress, instructing the General Council to report to Congress, on a proposal to fix a minimum wage for all workers. The first step in this direction was declared to be the setting up of minimum wage

boards. The Congress protested against the recent abolition of the Agricultural Wages Board and the District Wages Committee, and called upon the Government to set up Trade Boards in all industries where the workers demanded such protection.

COST OF LIVING INDEX.

A resolution was passed challenging the accuracy of the index numbers prepared by the Department of Labour, as a measure of periodical variations in the cost of living, the wages of three million workers being declared to be based upon this index number. The resolution called attention to the discrepancy between the Department index, and that prepared by the Joint Labour Committee recently appointed by the Parliamentary Committee of the Congress, the Labour Party, the Co-operative Union, the "Triple Alliance," and other labour organizations; and instructed the General Council to press for the adoption of a method of calculating the official index number which would reflect the actual facts as to the cost of living. It also condemned the practice of firms in withholding information regarding profits, and expressed alarm at the continued growth of trusts and combines.

WOMEN'S TRADE UNION LEAGUE.

The Parliamentary Committee's proposal was adopted, to the effect that in October the work and machinery of the Women's Trade Union League would be brought under the direct supervision of the Women's Department of the General Council.

LEAGUE OF NATIONS.

The Congress reaffirmed its previous declarations regarding the constitution of the League of Nations; demanded the reorganization of the League to provide for the fullest democratic representation of all nations as essential to the prevention of future wars; asked for adequate

labour representation on the Council of the League, and instructed the General Council to endeavour to secure popular support for a movement to enlist organized labour in all countries on behalf of a League that would be fully representative of the people, and which would recognize the rights of all peoples.

DISARMAMENT.

The Congress while approving the international disarmament conference called by the President of the United States, further declared that such a conference could not be satisfactory unless labour should be adequately represented; claimed the right of the Trades Union Congress to appoint representatives; protested against recent armament measures by Great Britain; and asked for suspension of all such preparations until the disarmament conference should have finished its work.

PROVISION FOR MOTHERHOOD.

A resolution was passed unanimously demanding that the Government provide pensions for mothers, as an urgent economic necessity.

RUSSIAN FAMINE RELIEF.

The Congress called upon British organized labour to support the Russian people in the unprecedented calamity which had fallen upon them, authorized the General Council to start a fund for the purpose of affording financial relief, and placed £1,000 at the disposal of the Council as a beginning for such a fund; the General Council was further authorized to use the whole power of organized British labour for the purpose of inducing the Government to furnish the necessary medical supplies, means of transport, raw material, and money credits urgently required by the Russian people, and urged the British Government to recognize the Russian Government so as to make it possible to carry out these proposals.

OTHER RESOLUTIONS.

The Congress resolved to take the necessary steps to protect the interests of trade unionists in Belfast, who were denied the right to work owing to their political views.

A joint board was authorized to consist of representatives of the General Council and the Clerks' Union, to deal with conditions of employment in trade union offices.

The Congress again declared itself in favour of the nationalization of the railways.

The President asked that workers should give full support to the co-operative movement, which he described as "one of the mightiest weapons that

could be used to further the policy of emancipation from the thralldom of the existing system."

The government was asked to reconsider its decision to reduce the programme of building as formerly outlined by Dr. Addison, this being necessary in the interests of the nation's health, and to offer the proposed buildings at a fair rental.

Owing to a misunderstanding as to procedure, the ballot for the election of the members of the new General Council was found to have been irregular, and the election was declared null and void, necessitating the taking of a new ballot by post. Until this election is completed, the old Parliamentary Committee will continue to function.

ANNUAL CONFERENCE OF THE MINERS' FEDERATION OF GREAT BRITAIN

THE Annual Conference of the Miners' Federation was held at Llandudno, Wales, August 17-19. The following resolutions, amongst others, were carried: A resolution asking for a maximum working week of five shifts of six hours work a day; for the abolition of piece work and for a fortnight's holiday a year on full pay; a resolution demanding the compulsory provision of baths at every pithead; a resolution regretting the failure of the Government to introduce legislation for the purpose of nationalizing the mining industry, and reiterating the Federation's conviction of the necessity for nationalization and suggesting a campaign to educate the working-class as to the

benefits from such a policy; a resolution demanding pensions for all workers at the age of 60 of £1 a week; a resolution demanding that all hospitals be taken over and maintained by the Government. A proposal made by the South Wales Miners' Federation that the two-thirds majority rule for declaring or continuing a strike should be abolished and that a simple majority should in future be sufficient, was referred to the executive. A resolution instructing the Executive to press forward the demand for nationalization of the land and railways and to take such steps as shall secure the unanimous support of workers in the country to accomplish these objects was carried unanimously.

RECENT LABOUR LAWS OF CANADA

THE present article is a summary of the various laws bearing directly or indirectly on labour matters which have recently been enacted by the Parliament of Canada and the legislatures of Manitoba, Nova Scotia and Prince Edward Island. Similar legislation enacted at the last sessions of the legislatures of New Brunswick, Quebec and Saskatchewan, and in the provinces of Ontario, Alberta and British Columbia, has been summarized in the May and June issues of the *LABOUR GAZETTE*.

Dominion Legislation

At the session of the Dominion Parliament which began on February 14 and closed on June 4, 1921, several laws of interest to labour were amended.

An amendment to the Bankruptcy Act includes all indebtedness of the bankrupt or authorized assignee under any Workmen's Compensation Act among the debts which are to have priority over ordinary and general claims.

Several changes were made in the Immigration Act. Accredited representatives of international trade unions were added to the list of classes permitted to enter Canada for the temporary exercise of their duties without regard to the usual conditions imposed on persons granted admission to the country. Wider powers were given in the matter of regulations and these may now require a money qualification of all persons seeking to enter Canada, except Canadian citizens, diplomatic representatives and officers and men of the military and naval forces with their wives and families. The regulations may also provide that passports will not be recognized unless all necessary formalities in regard to them have been complied with.

An amendment to the Prisons and Reformatories Act makes provision for the apprenticeship of juvenile delinquents in the Province of Nova Scotia. The term of indenture may not extend beyond the time when such child reaches the age of twenty-one years. The wages earned by the child are to be paid to him or to some person for his benefit.

Manitoba

The Manitoba Legislature at its last session, which opened on February 10 and closed on May 7, 1921, amended several laws of interest to industrial workers, including those dealing with the regulation of shops, mothers' allowances, co-operative associations, and housing.

The amendment to the Shops Regulation Act gives a close definition of each of the six classes of shops which are exempt from the operation of early-closing by-laws passed under the Act. A shop in which the business of two or more such exempted classes is carried on is to be considered closed if the goods which render it liable to be closed are sufficiently separated from the rest of the goods by a screen or partition which is kept padlocked during the time such shop is required to be closed.

A clause was added to the Mothers' Allowances Act authorizing the raising of temporary loans in anticipation of the Municipal Commissioner's levy to recoup the Province for the amount or part of the amount expended in payment of allowances.

A number of changes were made in the law respecting co-operative associations. These may now do business on a credit basis both in buying and selling, but associations selling by retail must have the authority of their directors

before extending credit. The directors may pledge the credit of the association for any purpose incidental to the carrying on of the business, but may not issue bonds, debentures, or similar securities. The directors before setting aside money for the reserve fund must make allowance for depreciation. All associations are now subject to the provisions of the Act, and, where not inconsistent, to the provisions of the Companies Act also. Provision is made for the establishment of locals at any point in the Province.

An amendment to the Housing Act authorizes municipalities to expend money borrowed from the Province under the Act to make advances to any veteran, or the widow of a veteran whose home is mortgaged or encumbered by reason of unpaid instalments of principal, accruals of interest, taxes or other charges, or who desires to redeem property owned during the war which has passed to a tax sale purchaser, mortgagee, vendor or other person. Advances are limited to seventy per cent of the value of the property, except in the case of a totally disabled veteran or his wife, or the widow of a veteran, when the full value may be advanced. Interest not exceeding 7 per cent per annum may be charged and secured by first mortgage or other satisfactory security.

Nova Scotia

The Nova Scotia Legislature which was in session from March 9 until May 28, 1921, passed laws relating to steam boilers, woodmen's liens, and workmen's compensation.

The new Steam Boiler Inspection Act applies to the same classes of boilers as the Steam Boiler Act which it repeals, and provides that the Lieutenant Governor in Council may make regulations on the points covered by the old Act.

An amendment to the Woodmen's Lien Act adds sawing or any necessary work done in connection with a saw

mill to the classes of labour or service which entitle the worker to a lien. Statements of claim must be filed within thirty days after the last day on which labour or services, or some part thereof were performed.

The Workmen's Compensation Act was amended to provide that, for purposes of assessment, a member of the crew of a ship who is under agreement to make one or more fishing voyages as a sharesman shall be deemed to earn wages at the rate of \$780 per annum, instead of \$1,200 as formerly.

The new Mines Act contains the same provisions respecting inspection and fair wages in crown mines as were contained in the old law.

A clause is added to the section of the Assessment Act which deals with the imposition of poll taxes. Every employer having ten or more employees liable to pay a poll tax must furnish to the Municipal Clerk when required a list containing the names and addresses of such employees, and is authorized to deduct from their salary or wages the amount due for such tax and pay it to the collector.

The Act to Provide for Fair Rents for Dwelling Houses and to Restrict the Eviction of Tenants, passed in April, 1919, will remain in force until April 30, 1922.

Prince Edward Island

The Legislature at its recent session passed a law enabling the Province to take advantage of the Dominion Technical Education Act.

An amendment to the Public School Act requires every child to attend school on sixty per cent of the school days in each month, unless he has a valid excuse for non-attendance. Formerly children residing in Charlottetown or Summerside were obliged to go to school for thirty weeks and those in the other parts of the province for twenty weeks.

CONFERENCE OF EMPLOYMENT SERVICE COUNCIL OF CANADA

THE third annual meeting of the Employment Service Council of Canada was held at Ottawa on August 31 to September 2. The following members of the Council were present:—David Cochrane, Moncton, representing New Brunswick; Joseph Ainey, Montreal, representing Quebec; H. C. Hudson, Toronto, representing Ontario; J. A. Bowman, Winnipeg, representing Manitoba; G. E. Tomsett, Regina, representing Saskatchewan; J. W. Mitchell, Calgary, representing Alberta; J. D. McNiven, Victoria, representing British Columbia; E. Blake Robertson, Ottawa, representing the Canadian Manufacturers' Association; J. P. Anglin, Montreal, representing the Association of Canadian Building and Construction Industries; Arthur Martel, Montreal, and E. W. A. O'Dell, Hamilton, representing the Trades and Labour Congress of Canada; C. P. Riddell, Montreal, representing the Railway Association of Canada; S. N. Berry, Cedar Rapids, Iowa, representing the Canadian Railway Brotherhoods; Frank Hawkins, Ottawa, representing the Canadian Lumbermen's Association; Mrs. Jean S. Robson, Ottawa, and Bryce M. Stewart, Ottawa, representing the Department of Labour; C. G. MacNeil, Ottawa, representing the Great War Veterans' Association; T. A. Stevenson, Ottawa, representing the Department of Soldiers' Civil Re-establishment. Various government officials were also present in an advisory capacity. In the absence of the chairman, Mr. W. B. MacCoy, K.C., of Halifax, the vice-chairman, Mr. J. A. Bowman of Winnipeg, presided.

The first day was devoted to questions relating to employment office administration and the meetings were attended only by officers of the federal and provincial employment services. At the first meeting of the whole council, a general discussion took place chiefly on unemployment and the establishment

of employment service councils. Three committees were then appointed, one to consider the situation with regard to provincial advisory councils, another on unemployment and a third on service for special classes. Reports of these committees were submitted at subsequent meetings.

The committee on provincial advisory councils recommended that the Minister of Labour should again communicate with the provincial governments that had not carried out the terms of the agreement providing for such councils, and should urge their immediate appointment, and that members of the Employment Service Council of Canada should be requested to urge their organizations to assist in this matter. The Committee on Service for Special Classes urged the establishment of junior and professional and business offices in the employment service, and the establishment of special divisions for women in all employment offices. It also recommended that the closest co-operation should be maintained with the Canadian Women's Hostels by the Women's divisions of the Employment Service. With regard to the placement of handicapped ex-service men, the committee recommended that the Employment Service of Canada undertake this work provided details could be satisfactorily arranged between the Director of the Employment Service and the Department of Soldiers' Civil Re-Establishment. Continued effort was urged toward adjustment of immigration to the labour market and the placement of female workers from Great Britain. A recommendation was made that the proper officials of the Employment Service should discuss with the railway officials the feasibility of running harvest excursions to important centres in each of the prairie provinces for the more convenient distribution of harvest labour. With regard to the placement of seamen the Committee recommended that this

question be referred to the Director of the Employment Service of Canada and to the general superintendents in the provinces of Nova Scotia, New Brunswick, Quebec and British Columbia, who come directly in touch with this class of worker.

The committee on unemployment recommended that the Dominion and provincial governments and the municipal authorities should undertake all necessary renewals and repairs of public buildings, that the Dominion and Provincial governments should undertake all necessary overhauling of rolling stock, etc., on the Government railroads and of all other equipment belonging to the spending departments of the governments; that employers, employees and the consuming public should make every effort to promote regularity of employment, and that the Dominion, provincial and municipal authorities should concentrate their public works and expenditures so far as practicable in periods of industrial slackness, and should plan to have employment available by such schemes as land clearing, reclamation, irrigation and afforestation; and that the government should construct necessary public works such as custom

houses, post offices and other public buildings. It was also recommended that the Employment Service Council should advise the public, when prices are fair, to demand goods made in Canada as another means of lessening unemployment. The committee recommended further that the federal, provincial and municipal governments be requested to put into effect an eight-hour day for their employees whenever feasible. The final recommendation was for the complete abolition of all private employment agencies other than those operated by employers in connection with their own business.

This report was adopted with an amendment by Mr. McNeill, representing the Great War Veteran's Association, to the effect that since industrial prosperity depended largely on credits, the Council should petition the Minister of Labour to invite representatives of the organized financial interests of Canada to confer with members of the Council, and that the Council should adjourn to reassemble in the proposed conference and thus enable recommendations to be made, promising more effective remedies for unemployment.

FURTHER ACTION TOWARD THE ALLEVIATION OF UNEMPLOYMENT CONDITIONS IN CANADA

SOME account of the action that has been taken during recent months in Canada towards the development of plans for the relief of the unemployment situation has been given in the last two issues of the LABOUR GAZETTE. In the present article is summarized the more outstanding features of the action that has been taken during recent weeks.

On October 5, the following statement was given to the press by the Minister of Labour:—

Unemployment, with its attendant problems, has for a year past been the cause of public anxiety. The dislocation of export trade, caused by the inability of the European countries to

purchase our goods, accentuated because of debased currency, together with the universal buyers' strike at home, brought to Canada in the autumn of 1920 a serious industrial depression. Falling prices were everywhere predicted. Consumers waited for cheaper goods. Dealers, finding sales slow, did not buy. Manufacturers were unable to sell goods produced, and, with lines of credit curtailed, were automatically forced to reduce or discontinue operations. One hundred and fifty thousand workmen lost their employment during the last ninety days of the year. Before the seriousness of the situation was fully realized by the public, steps were being taken to arrest the movement and aid those unable to maintain themselves. Over 8,000 employers were appealed to and asked to retain all workmen possible, on short time, if not on full time. Banks were asked to aid in extending credits enabling

industry to carry on. Federal, Provincial and Municipal governments did what was possible on short notice to provide employment with the result that little further decline occurred after January 1.

On December 14, 1920, the Federal Government announced a relief policy to aid those in need, reimbursing to municipalities throughout Canada one third of the amount each found it necessary to expend to relieve distress. The Federal Government has expended over \$600,000 for this purpose in addition to maintaining entirely 12,165 unemployed disabled soldiers and their dependents at a cost of over a million dollars, relieving municipalities of all expense in this connection.

These measures arrested and steadied the situation, minimized unemployment, and materially contributed toward the prevention of suffering on the part of many worthy citizens. The Federal Government received many expressions of appreciation because of the prompt action taken in a matter primarily the responsibility of local communities, but universally it was urged that employment rather than unemployment relief should be provided. To meet this need a communication was addressed to all Provincial Governments on July 13, 1921, proposing that such advance preparation as was possible should be made to meet the anticipated need during the coming winter.

A provincial survey of the existing and prospective conditions in each province was suggested, and several provincial governments have approved and adopted the idea, resulting in valuable information relative to the problem being forthcoming. It was further suggested that after investigation provincially had been made the Federal Government would be able to meet representatives of the several provinces in conference with a view of determining the best method by which the Federal and Provincial Governments could aid municipalities during the coming winter in dealing with unemployment. Three of the nine provinces have approved the holding of a conference, two, however, suggesting that the representation at such conference should include other than governmental representatives. Meanwhile trade conditions have materially improved. Unemployment has, since July, been gradually but continually diminishing, the situation today being substantially better than the most optimistic believed possible two months ago. There will, however, inevitably be considerable unemployment during the coming winter in certain localities.

Correspondence on this subject has been exchanged between the Department of Labour and some seventy municipalities, and three representatives of the Department have visited most of the industrial centres gathering information on the subject. Many municipalities advise that they will be well able to meet the requirements in their own locality without outside as-

sistance, provided unemployed labour does not drift in from rural districts and become the problem of urban centres to provide for.

After careful consideration in the light of last winter's experience, and information carefully gathered, the Federal Government has determined upon a definite course of action to aid in fairly meeting the situation this coming winter. The policy outlined, and the principles upon which it is based, are briefly:—

1. Unemployment relief always has been and must necessarily continue to be, primarily a municipal responsibility, and in the second instance the responsibility of the Province;

2. That because of the present situation being due to causes beyond the power of local, or even national, control, Provincial and Federal Governments should co-operate with municipal authorities in,

- (a) helping to create and provide employment;

- (b) where employment cannot be furnished to workmen who are willing to work, to aid in providing food and shelter for themselves and dependents until the present emergency period is past.

3. That Federal funds used for unemployment relief, or for relief work, must be disbursed only through responsible municipal authorities, who in each case shall bear at least one-third of the total or extra cost.

The Government proposes to participate in the cost of work provided by municipalities on the following basis:—

- (a) Municipality to bear the normal cost, that is to say, the cost of carrying on the said work in the normal working season;

- (b) Estimate of normal cost to be approved by Federal Government's Engineers in the Department of Public Works;

- (c) That Municipal, Provincial and Federal Governments bear equally and jointly the actual cost over the estimated normal cost, thereby encouraging the creation of employment where possible;

- (d) That where work cannot be provided, the Federal Government continue to refund one-third of the disbursements actually made by a municipality for unemployment relief, conditional upon the Provinces participating on an equal basis.

By these means employment—instead of unemployment relief—can in most cases be furnished, thereby overcoming the only criticism of the Government's policy of last winter.

The Minister of Labour is communicating in detail the proposals to all Provincial Govern-

ments, copies of which will be supplied to any municipality interested on application to the Federal Department of Labour.

MANITOBA

A general conference on unemployment which was called by the Manitoba Government met at Winnipeg on September 15. Representatives from the cities of Manitoba and the municipalities around Winnipeg, from employers' and employees' organizations, the United Farmers of Manitoba and the Union of Municipalities were invited to be present.

A report was submitted to the conference by a committee appointed at a preliminary conference and representative of the governments of the province and of the city of Winnipeg. This report was divided into three parts dealing respectively with the present employment situation and forecast of the probable situation in the winter of 1921 and 1922, some of the causes of unemployment and recommendation for the calling of a Dominion Conference, and suggestions as to representatives to attend the proposed Dominion Conference and methods of solution of unemployment for consideration of such Conference.

With regard to the present situation the committee stated that there was at that date no abnormal unemployment in Manitoba except in the building trades. Demands for harvest help had exceeded the supply, and industrial activity in other lines had also increased. With regard to the winter, the committee expected that they might fairly expect unemployment to be sufficiently acute to warrant concerted action. Lumber companies expected to employ only about half the number they had in the woods last winter, and reports received by the Employers' Association of Manitoba from 310 of their members showed an anticipated decrease of employees on their pay-rolls from 41,844 in August, 1921, to 38,326 in January, February and March, 1922. Returns from members of the Winnipeg Builders' Exchange showed

a decrease of 500 in the number of men employed in August, 1921, compared with August, 1920, and it was expected that after January 1, most of the men would be unable to secure work at their trade.

The Conference passed a resolution to accept this report and to submit it to the Federal Minister of Labour as a report on the labour situation in Manitoba in reply to his request for such a report.

In discussing the causes of unemployment, the Committee excluded the disabled and those who were unwilling to work. In the opinion of the Committee, the main causes of unemployment insofar as Manitoba is concerned, are the following:

(1) The influx of men and families from country districts into the cities and towns during the abnormal industrial activity due to the war, causing a surplus of labour now that activity no longer prevails. The urban population has also increased through a large number of returned men who had enlisted in the country, taking up residence in the cities.

(2) Seasonal conditions causing a great fluctuation in the labour market, particularly in the building trades.

(3) Fluctuations in industry brought on by world conditions and social habits.

(4) A lack of relation between the system of education and the labour market, to train youths in occupations in which workers are in demand.

(5) The immigration of men and families who are not equipped to take up farm work and who wish to take up other industrial activities in which there is no demand.

(6) The lack of organization of productive industry with a view to continuous employment.

The Committee declared that undoubtedly the unemployment problem was a national one and recommended that the Federal Minister of Labour should be urged to call a Dominion Con-

ference to discuss the problem, and to arrive at a uniform plan to deal with it. In the event of a Dominion Conference being called the Committee recommended that the following bodies be requested to appoint one representative each: The Manitoba Government, the City of Winnipeg Council, the United Farmers of Manitoba, the Trades and Labour Council, Winnipeg, the Employers' Association, Winnipeg.

The following methods of dealing with the problem were suggested by the Committee for discussion at the proposed Dominion Conference:

1. That the Federal Government institute an agricultural survey similar to that carried out in Manitoba this summer by the Manitoba Agricultural College in all the Provinces in Canada with a view to ascertaining causes for the apparent rural depopulation which has resulted in the influx to our larger centres of population of men and women formerly engaged in agricultural pursuits with a view to adopting some corrective policy.

2. That the Dominion, Provincial and Civic Governments, other public bodies, and employers generally be encouraged to so arrange their expenditures that a proportion of their work may be held back for periods of unemployment.

3. The adoption of more stringent regulations by the Immigration Department of the Dominion of Canada, whereby men and women who are not prepared, both physically and financially, to take up farm work, are not allowed to come into the country during the present period of business depression.

4. That the training of the youth of the nation be studied with a view of training them in occupations in which workers are in demand.

5. The perfecting of the present excellent Government methods for the mobilization of labour, with a view to the quick transference of unemployed labour from one section of the country to another, according to labour conditions.

6. Large employers should be encouraged to organize their industry with a view of continuous employment by establishing complementary industries to their own so that slack time in one industry would be compensated for by busy times in the other and periods of unemployment avoided. The railways could do a great deal along this line by organizing their repair work to avoid laying off large numbers of men at certain periods of the year.

7. That only as a last resort should direct relief measures be undertaken, and that when

found necessary, it should be borne in mind that the remedy for unemployment is employment. The practice of handing out "unemployment doles" is wrong in principle and harmful in effect, and should not be resorted to until all other measures have failed.

Should direct relief measures become necessary the Committee recommended the organization of "relief work" in municipalities where the situation becomes acute, the Dominion and provincial governments and the municipalities each to contribute one-third of the cost; the work to be supervised by a board in each province, representing the Dominion and provincial governments. Various schemes and undertakings appropriate for relief work were suggested by the Committee.

The Conference passed the following resolution with reference to these recommendations:

Whereas it has been recommended that a Dominion Conference be called by the Federal Government; And whereas the Committee has made certain recommendations covering (a) The appointment of representatives by certain organizations, and (b) the discussion of certain methods of relief of unemployment at a Dominion Conference; And whereas it is deemed advisable that all organizations recommended by the Committee be represented at a Dominion Conference and that the suggested methods of relief are worthy of discussion;

Be it resolved: That the Committee's report be adopted and that the Provincial Government deal with the matter of representatives accordingly and that a copy of that section of the Committee's report suggesting certain methods for discussion be forwarded to the Federal Minister of Labour in order that they may be laid before the Dominion Conference, if called.

ALBERTA

At a conference on unemployment which was held at Edmonton, Alberta, on August 23 (see LABOUR GAZETTE, September, 1921, pages 1154 and 1155), it was recommended that the mayors of the six cities of the province investigate the housing scheme of the Federal Government with a view to seeing how it can be better applied. In conformity with this resolution the city commissioners of Calgary have decided to invite

all persons interested to sign a form of application as follows: "I am interested in proposed house building scheme and provided plans and conditions are satisfactory, am a probable purchaser or lessee of a type of five-roomed bungalow costing about \$3,000, and will be prepared to deposit at least \$500 cash on same if purchased or leased, and pay any balance due in monthly instalments of at least \$30 a month." If the scheme is such that it will directly involve the credit of the city, it is probable that a vote of the people will be necessary before putting it into effect. It is reported that other cities in the province are taking similar action.

BRITISH COLUMBIA

In the September issue of the *LABOUR GAZETTE* on page 1155, reference was made to certain conferences called by the government of British Columbia to consider the unemployment situation. At meetings on August 10 and 17 recommendations for dealing with the unemployment question were made by the Economic Council of Vancouver. This Council was created for the purpose of assisting in the solution of the problem of unemployment. It is composed of elected representatives of 29 organizations of Greater Vancouver, associations of employers and employees, professional and technical associations, and various others. The Council estimated that during the coming winter there would be at least 8,000 unemployed in Greater Vancouver, and that under the most efficient administration the sum of \$850,000 must be provided to handle the situation.

The recommendations of the Council were as follows:

1. That all emergency funds be expended under the direction of one administrative body.

2. That for this purpose a Joint Commission be appointed composed of eight members; four being representatives of the Provincial and Federal Governments and Municipalities interested, and four private citizens collectively selected by the public and business associations of Greater Vancouver.

3. That this Joint Commission of 8 members have power to add one to their number who will be the active Chairman of the Joint Commission.

4. That all members of the Joint Commission serve without pay.

5. That such Joint Commission be put into effect at the earliest possible date to the end that a comprehensive business plan may be adopted for the coming winter, arrangements made for such productive work as may be efficiently undertaken and generally the unemployment situation taken in hand in good season.

6. That all expenditure be for productive work.

7. That the wage pay in order to prevent any influx of unemployment, be the moderate sum of 30c. per hour for single men and so as to get efficiency, a system of reasonable continuous employment be adopted instead of the half time plan.

8. That Municipal, Provincial and Federal Governments provide a sum of money equal to their direct expenditure for Relief purposes for last year, (estimated at \$330,000) such money to be expended by the Joint Commission in conformity with the plans for their respective engineers.

9. That in order to put the Joint Commission in a position to expend on "useful work" a sum equal to the total of last year's expenditures for Relief, the Provincial Government provide the sum of \$500,000 for improvements on University site, road-work, etc.—This money to be expended under the Joint Commission instead of by public contract.

10. That a reserve fund to meet contingencies be provided by the Province placing at the disposal of the Joint Commission the 60 per cent which the Province will recover from the Federal Government on such part of the \$500,000 above referred to as may be expended on approved road-work.

11. That in lieu of the old system of meal tickets, which invariably found their way into the hands of Oriental restaurant keepers, a system of rationing similar to the army plan be adopted, which would result in ensuring a good diet at not to exceed 80 cents a day. This would show a large saving over the former system.

12. That special effort be made to place as many of the unemployed citizens as possible in permanent positions.

13. That active steps be taken at once to discourage men seeking employment from coming to Vancouver this winter.

14. That the system of doles, soup kitchens or bread lines be absolutely discarded in Vancouver this coming winter.

15. That the government concerned agree

on one firm of chartered accountants to audit all expenditures of the Joint Commission.

Should Vancouver and adjacent municipalities, the Province of British Columbia and the Federal Government adopt a consolidated plan embodying the principles outlined above, the Council pledged its active support and promised to endeavour to induce the citizens of Vancouver to subscribe for any necessary bonds. These recommendations were approved by the Vancouver Trades and Labour Council (international), which had a representative on the Economic Council, and by a large number of other organizations, but they were opposed by the One Big Union Trades and Labour Council.

At the time of going to press, it is reported that on October 7 the attorney-general and minister of labour for British Columbia informed a delegation representative of prominent business firms and leading organizations of Vancouver that the government could not endorse

the scheme of the Economic Council to have a commission appointed to handle funds granted by municipal, provincial and federal authorities for relief of unemployment during the coming winter. "I feel," the attorney-general is quoted as saying, "that if the provincial government were to endorse the scheme to put the funds in control of a commission, it would give the appearance of forcing the hand of the federal and civic authorities. With regard to the expenditure of provincial government funds on roads and similar work, I can say right now that the cabinet will never give control of money expended through the public works department into the hands of a commission." The government, however, offered to call a further conference consisting of representatives from the Vancouver City Council, the Economic Council and members of the provincial government within the next few weeks, when the question of administering funds could be considered.

UNEMPLOYMENT RELIEF SCHEME OF BRITISH CABINET COMMITTEE

A CIRCULAR recently issued by the British Ministry of Health to County, Borough and Urban District Councils in England and Wales contains the decision arrived at by the recently appointed Cabinet Committee on Unemployment with regard to the inauguration of works of public utility for the relief of unemployment. This decision is as follows:—

(1) Where for the purpose of providing employment in the present emergency local authorities (including statutory bodies who do not trade for profit) put in hand or accelerate approved works (other than revenue-producing works) which would not otherwise have been proceeded with, or so accelerated at the present time, the State will give financial assistance on the following basis:—

Grants equal to 50 per cent of the interest and sinking fund charges on loans raised by local authorities to meet

expenditure on approved schemes actively commenced before January 1, 1922, will be paid by the State for a period of one-half the term of the loans subject to a maximum of 15 years. The expenditure to be taken into account will be all approved expenditure incurred within the period ending March 31, 1923.

In approving schemes special regard will be had to the direct employment of unemployed persons and to a preference being given to ex-service men.

(2) In the case of revenue-producing works, grants will be paid in approved cases equivalent to 50 per cent of the interest on loans raised for a period of not less than 10 years, in respect of expenditure on schemes actively commenced before January 1, 1922, provided that such expenditure is incurred within the period ending March 31,

1923. These interest grants will be paid for a period of five years.

Local authorities must submit their schemes in detail to the Ministry of Health which will make any necessary arrangements with other Government Departments, and in particular with the Ministry of Labour whose certificate that serious unemployment exists in the area is a necessary preliminary condition to the approval of schemes. In order that the available funds may give employment to the maximum number of workers the rate of wages for un-

skilled labour, where the local authority undertakes the work by direct labour, should, for a probationary period of six months, be appreciably lower than the prevailing rate in the district. The required workers are to be obtained through the employment exchanges of the Ministry of Labour and these workmen will be kept on the exchange registers and will be required to take other suitable work when it is offered to them by the exchanges which will co-operate with the local authorities and Boards of Guardians for this purpose.

UNITED STATES UNEMPLOYMENT CONFERENCE

THE national unemployment conference recently called by the President of the United States (see LABOUR GAZETTE, September 1921, page 1087) met at Washington, D.C., on September 26 and on a number of days following. The objects of the conference were stated by President Harding as follows: "The conference is called to inquire into the volume and distribution of unemployment, to advise upon emergency measures that can be properly taken by employers, local authorities and civic bodies, and to consider such measures as would tend to give impulse to the recovery of business and commerce to normal." The President, it was understood, favoured unemployment relief by some other means than federal appropriation measures.

The conference was composed of 55 members, representing many of the leading industrial and financial corporations and labour organizations, supported by an advisory committee of twenty experts in economics and sociology. The Hon. Herbert H. Hoover, Secretary of Commerce, presided, Secretary of Labour Davis co-operating in the work of the conference.

In his opening address Mr. Hoover expressed the hope that the solution of the unemployment problem in America would be reached through the co-

operative action of employers and public bodies, and that the government would thus be saved "from that ultimate paternalism that will undermine our whole political system." "What our people wish," he said, "is the opportunity to earn their daily bread, and surely in a country with its warehouses bursting with surpluses of food, of clothing, with its mines capable of indefinite production of fuel, with sufficient housing for comfort and health, we possess the intelligence to find a solution. Without it our whole system is open to serious charges of failure."

The work of investigating the various problems before the conference was divided among nine sub-committees, as follows: (1) Unemployment statistics; (2) employment agencies and registrations; (3) emergency state and municipal measures and public works; (4) emergency measures by manufacturers; (5) emergency measures in transportation; (6) emergency measures in construction; (7) emergency measures in mining; (8) emergency measures in shipping; (9) public hearings. The recommendations of these sub-committees are embodied in the general recommendations contained in the report of the Conference.

The number of unemployed was variously estimated at from 3,500,000

to 5,500,000, but no machinery was found to be in existence for the collection of exact figures.

RECOMMENDATIONS.

The Conference found the unemployment problem to be primarily a community problem, responsibility for leadership in the work of relief resting upon the mayors of the various cities. The basis of local organization should be an Emergency Committee to devise and carry through a community plan for meeting the emergency, existing agencies and local groups being used as far as practicable. Public employment and registration agencies should be set up as a beginning. Relief registration should be kept entirely distinct from that for employment. It should be the duty of the employment agencies to canvass and organize the community for opportunities for employment, residents having priority in the securing of work. Employers should give preference to workers sent to them by the Emergency Employment Agencies. The Emergency Committee should publish reports of the numbers of persons requiring work, so that the community may understand its responsibility in regard to its unemployed members.

The owners of houses, hotels, offices, etc., might, it is pointed out, reduce unemployment by having repairs and cleaning carried out in winter, instead of waiting until spring. Municipalities also should extend their public works to the greatest volume.

State Governors are invited to co-ordinate all State agencies for the support of the mayors, see that city officials meet their responsibilities, and expedite the construction of roads and other state work.

An appropriation by Congress is suggested without delay for road construction which, with State appropriations, would provide for many unemployed.

The Conference found, however, that the most promising field for the immediate relief of unemployment lies in

the building and construction industry, in all branches of which it was estimated that more than two million people could be employed, if full activity were to be resumed. Proper expansion had been hindered by undue cost and "malignant combinations" which had contributed largely to the unemployment situation. The conference recommended action by the various communities in providing capital on terms that would encourage home building, and suggested that State Governors should summon representative committees, with the co-operation of the mayors or otherwise, to determine facts, and to organize community action in securing adjustments in cost, including removal of freight discriminations, restrictions of effort and other such unsound practices, to the end that building may be fully resumed.

Manufacturers, it was further suggested, could contribute to relieve unemployment by such measures as part time work, through reduced time or rotation of jobs; manufacturing for stock; undertaking plant construction, repairs, etc., and transferring employees to other than their regular work; reducing the number of hours of labour per day; reducing the work-week to a lower number of days during the present period of industrial depression; co-operation between employers and employees in giving effect to the foregoing recommendations.

The Conference condemned the efforts of those who still endeavour during the period of economic readjustment, to secure profits beyond the requirements of safe business practice.

One of the greatest obstacles to a resumption of normal business would be removed, it was declared, as soon as prices reach replacement values in terms of the cost of efficient production and distribution plus reasonable profit. Moreover, such price adjustments when effected by the producer, manufacturer, and wholesaler, should be promptly and fairly reflected by retail prices.

The committees on mining and shipping found that no emergency measures could be suggested for these industries

in view of their dependence upon general business conditions.

Before the conclusion of the Conference steps were taken to form an organization for a study of permanent measures for the prevention of unemployment.

On the conclusion of the Conference President Harding issued the following appeal to Governors and Mayors throughout the United States:

"The Conference which I recently summoned to Washington to advise as to the unemployment situation has demonstrated that an unusual volume of unemployment exists, and that pending the recuperation of trade the situation cannot be met, in due regard to our obligations and necessities, without a much more than usual organization throughout those states and municipalities where unemployment has reached considerable proportions.

"The Conference has recommended a plan of organization which has had the support of commercial, manufacturing, professional and labour representatives of the country. It is highly necessary that more accurate knowledge should be had, through such organization, of the volume and necessities of the unemployed. It is essential that the co-operation of all sections of each community should be brought into action behind such organization to provide work and assistance that we may pass through the coming winter without great suffering and distress. It is of national importance that every community should at once undertake such organization in order that the nation may be protected as a whole. Moreover, the thorough commitment to such a task is sure to start a thousand activities which will add to our common welfare.

"I, therefore, appeal to the Governors and Mayors of the nation that they take the steps recommended by the Conference.

"In order that there may be unity of action by all the forces which may be brought to bear, whether governmental or private, the Unemployment Conference is establishing an agency in

Washington through which appropriate co-ordination can be promoted, and through which reports on progress and suggestions may be given general circulation and co-operation. I trust this agency will be supported in this endeavour."

Action by Municipalities

It is stated that a number of municipalities are organizing committees along the lines suggested above. At Portland, Ore., for example, the Mayor's Emergency Unemployment Committee has recently issued the following statement outlining its objects and plans:

The city aims to:

- 1st. Provide employment for our own people.
- 2nd. Prevent employers taking advantage of conditions and cutting wages.
- 3rd. Make street begging unnecessary.
- 4th Prevent the opening of soup kitchens.

Under the plan adopted:

The Mayor is General Director of the work. There are four assistant directors. These directors may draft any person they wish to assist them.

The First Director is to advocate the performance of Public Work during the winter. In a conference with State, County and City departments the latter agreed to this program. Much relief is expected from this.

Second Director has charge of Industrial Activities. He will urge industries to do as much construction work as possible during winter. He will also solicit home-owners to provide "odd jobs." If conditions warrant he will endeavour to have regular employment divided up so it will not be confined to the same persons all the time.

Third Director will have charge of Employment of Women. Three agencies are now engaged in repair of clothing, etc. These will be combined and enlarged for benefit of women workers.

The above is largely for the relief of residents of Portland.

For the floating population it is planned to establish a woodyard under the Fourth Director, where cord wood for fuel will be produced and sold for the maintenance of the yard.

A program of Conservation of Foodstuffs will be promoted for the benefit of the woodyard and for general relief. Unmarketable potatoes and other food will be stored at the yard and distributed to the needy.

Municipal rockpile will be operated for the benefit of those who refuse to work. The rockpile will be extensively advertised in the Northwest to prevent an influx of men.

WORK OF THE FRONTIER COLLEGE, TORONTO

Proposal for Reduction of Unemployment

THE Frontier College, with headquarters at Toronto, Ont., represents an interesting development in the movement for workers' education, and seeks to occupy a field not touched by any other educational body. The college grew out of the Reading Camp Association which was formed in 1900 for the purpose of providing literature for employees in the lumbering and mining camps of Ontario. The Ontario Government gave encouragement to the scheme by establishing branch libraries in the unorganized districts and introducing a system of travelling libraries. Reading camps were established in a number of places, and in 1902, the movement was extended to British Columbia.

The need for instruction in the camps was early felt by the Reading Camp Association, but some difficulty was found in obtaining teachers qualified for the work and willing to undertake it. This branch of the Association's work was steadily developed, until it extended to every province in the Dominion with the exception of Prince Edward Island, and its instructors were to be found in all kinds of lumbering, mining and construction camps. The Frontier College was incorporated in 1919 to carry on this work.

In "The University in Overalls" (The Hunter-Rose Co., Ltd., Toronto), a volume by Mr. Alfred Fitzpatrick, founder of the Reading Camp Association and at present principal of the Frontier College, an account is given of the aims and achievements of this College.

During the first twenty years of the century more than 300 schools were conducted in tents, and scores of box cars have been refitted and utilized along the main lines of railways to serve the needs of extra gangs and bridge crews. A number of log huts have also been built as branches of the college in

various camps. About one hundred thousand men had attended the night classes conducted by the instructors of the college, and one hundred and eighty thousand men were given the opportunity through the college camps to have access to good literature and to keep in touch with the outside world. Many foreigners have learnt the English language at these camps and have thus been enabled to adapt themselves better to Canadian life. It is stated that from 15 to 25 per cent of the men in the frontier work will attend the night school classes. The instructors sent out by the College numbered 500 university men who taught at more than 600 points throughout the Dominion. Of these, 63 were university graduates. In addition to teaching at night the instructors work during the day at the same tasks, as a rule, as their students, sharing in every way the life of the men. Only a small proportion engage in other occupations such as that of camp physician, welfare worker, or clerk. The courses of instruction range from elementary work among the illiterate to tutoring for matriculation. A special method is used for the instruction of foreigners.

Recently the principal of the Frontier College has written to the mayors of the larger municipalities of Canada outlining a proposal for the relief of the unemployment situation and offering the co-operation of the College in putting such proposal into practice. "Let each municipality," the letter reads, "buy a number of homesteads and give work to their unemployed in clearing land and erecting a house and barn on each lot of 160 acres. Crown land agents and others in the north assure me that improved homesteads sell readily and at a profit. Instead of giving work that has little promise of permanent employment, will the municipalities not undertake systematic settlement in the clay lands. . . . Organized and effective

settlement by the municipalities will not only offset unemployment, but will provide the scattered settlers with neighbours, schools, doctors, nurses, and roads. It will not only prove a preventive of forest fires and disease, but it will give increased business to the industries of older Canada, and furnish a possible solution for the

success of our national railways." In the event of a favourable response to this suggestion, the Frontier College proposes to call a meeting to consider settlement in the clay lands by the municipalities, and will undertake to co-operate with Crown land agents and give particulars of as many lots as are required by the municipalities.

REPORT ON MOTHERS' ALLOWANCES AND NEGLECTED CHILDREN IN BRITISH COLUMBIA

THE first annual report of the Superintendent of Mothers' Pensions in British Columbia, recently issued, covers the period from the passing of the Mothers' Pensions Act, on April 17, 1920, to November 30, 1920. The first months of this period were occupied in the organization of local advisory boards to co-operate with the officials of the Mothers' Pensions Department. In addition, six temporary investigators were appointed in July to report on applications.

Under the British Columbia act, which is very wide in its application, any mother is properly qualified to receive assistance who is:—

- (a) A widow; or
- (b) a married woman whose husband is an inmate of a penal institution or a public hospital for the insane; or
- (c) a woman whose husband is unable to support his family by reason of sickness or accident arising while his wife was a resident of the Province; or
- (d) a deserted wife; or
- (e) any other person whose case, in the opinion of the Superintendent of Neglected Children is a proper one for assistance under the provisions of the Act.

It should be noted that in the four other Canadian provinces where mothers' pensions or mothers' allowances acts are in force, namely, Manitoba, Saskatchewan, Alberta and Ontario, the provisions of qualification are broadly the

same, except that in Saskatchewan Alberta and Ontario mothers whose husbands are in penal institutions are not qualified to receive assistance and that deserted wives are not qualified in Manitoba and Saskatchewan.

Up to November 30, 1,182 applications were received, this large number being explained by the many necessitous cases left by the recent influenza epidemic, and by war conditions which increased the number of deserted wives and families. Thus, out of 1,000 applicants, 665 were widows, 203 were deserted wives, 76 were the wives of husbands who were incapacitated, the chief causes of incapacity being tuberculosis, paralysis, arthritis, and other forms of rheumatism; 24 had husbands confined in mental hospitals; 6 had husbands in prison; 15 were divorcees; and 7 were unmarried mothers.

The number of children of mothers benefiting totalled 2,068, of which 1,075 were boys and 1,013 girls, these numbers not including children over 14 and under 16 who were earning wages.

Pensions, or allowances granted up to November 30 numbered 636. The amount paid out up to the same date was \$118,489. The pensions amounted to \$42.50 where there was a mother with one eligible child, with \$7.50 added for each additional child.

Of mothers who were found ineligible for pensions, 69 were not indigent, having other sources of income; 13 were in receipt of military pensions, and 18 of

workmen's compensation; 28 had not completed 18 months' residence in the Province; while 27 had husbands who were not British subjects. In this connection the report refers to the "hardship" resulting from the Federal act by which wives take the nationality of their husbands, the husbands in many cases not having taken out naturalization papers after years of residence in the Province. In other cases it was considered unlikely that the children of the applicant would benefit by a pension. As to the class of women who receive benefit the report says: "Those of us who have been in close personal touch with the mothers themselves cannot but express our great admiration for the kind of women who are receiving pensions. Nowhere could a better type of mother be found than these brave women who have in their times of adversity tried to do double duty to their children, in many cases causing permanent detriment to their health."

Among the difficulties experienced by the Board in judging claims mention is made of widows holding over-assessed or encumbered property producing no revenue, who, in cases where there is no will, are not allowed by law to sell this property during the minority of their children.

Report on Neglected Children

The annual report of the Superintendent of Neglected Children in the same province covers the period from December, 1919, when the office was opened, to November 30, 1920. During this period 92 cases of neglect were reported, involving 148 children, of whom 26 were committed to a Children's Aid society, the remaining cases being settled without court proceedings. Children's Aid societies taking care of children committed to their care from unorganized districts, receive through the Attorney General's Department a *per capita* grant of \$2 per week. The total amount so expended during the year was \$8,474, the actual number of children provided for being 114, of whom 66 were boys and 48 girls. In addition, grants amounting to about \$13,000 were made to societies taking care of orphan and destitute children.

Since the passing of the "Adoption of Children Act" in April, 1920, forty notices of application for adoption were received, 14 of these being for boys and 26 for girls. Under this act an adopted child has the same rights as a natural child. Previously such a child was unprotected in cases where the foster parents died without making a will specifically mentioning the child.

"LABOUR BANKS" IN VARIOUS COUNTRIES

RESOLUTIONS supporting the control of credit by Labour and the creation of "labour banks" were the subject of considerable discussion at the recent annual convention of the American Federation of Labour, the outcome of which was that the executive council was instructed to undertake a thorough inquiry into the use of savings and funds collected by banks and insurance companies, and the methods and use of the credit system, with a view to the more general extension of the "labour banks" idea. During recent years the move-

ment for the creation of labour banks has received considerable support from organized labour in a number of countries, and in previous issues of the *LABOUR GAZETTE* references have been made to certain of these banks already in existence in the United States and other countries.

The Brotherhood of Locomotive Engineers' Co-operative Bank, of Cleveland Ohio, opened for business on November 1, 1920, with funds of the various unions of the Brotherhood, its object being "to lend money to workers and

farmers instead of to speculators and manipulators." Starting with a capital of one million dollars, this bank after the first nine months of its operation held deposits of over nine millions. The directors fixed 10 per cent as the maximum dividend payable to any shareholder in one year, and at the end of the present year it is likely that savings deposit premiums will be sent to each depositor in addition to the 4 per cent interest allowed. Mr. C. E. Richards, secretary-treasurer of the Brotherhood, commenting on the success of this bank, anticipates that co-operative banking is destined to become a prominent feature of the labour movement.

Another organization on similar lines is the labour bank at Philadelphia recently formed with an authorized capital of five million shares at a par value of \$20 each. This is designed to receive on deposit the savings of wage earners and "to keep labour's savings in the hands of labour, where it cannot be used against the workers who produced it." A resolution before the New York State Federation of Labour proposes the creation of a Labour National Bank in New York City, with a capital of at least five million dollars, which would handle the funds of the unions within the state, and the savings of their individual members.

At the sixty-sixth convention of the International Typographical Union, held at Quebec last August, the Committee on Returns and Finances presented a scheme for the establishment of a National or State bank at the International headquarters at Indianapolis, Ind., under the executive council of the Union acting as a Board of Management. Each union member would under this scheme be assessed \$1, entitling to life membership, the fund thus collected being the property of the bank; another dollar being also subscribed by each new member to the capital stock fund of the bank. All union funds would be deposited with the bank, individual members being also asked to carry

accounts. Other unions not having banks of their own would be solicited to make use of the proposed bank. Members of the board of management and its employees would not be entitled to receive loans. The bank would be the property of the members collectively, and must not be disposed of except by the unanimous consent of the union. The Executive Council of the Union was instructed to consider this scheme and to decide whether the proposed bank should be a national or state bank.

In Great Britain the subject of credit control by the workers has long been discussed. A recent development is the organization by the South Wales Miners' Federation of a bank to transact trade union business.

In Germany, the Federation of German Trade Unions recently founded in Berlin a workers' bank, under the title "Bankverein für Deutsche Arbeiter A.G.," the necessary capital, amounting to ten million marks, being contributed by the unions. The object of this bank is to strengthen the economic forces of the affiliated unions and supply credit to the commercial enterprises connected with them. The bank was created through a decision by the Congress of Christian Trade Unions held at Essen, in November of last year. Herr Stegerwald, the Prussian premier, is chairman of the Board of Control.

The Austrian trade unions and co-operative societies, which had for eight years conducted a small co-operative banking concern, recently formed a "Workmen's Bank" with the object of centralizing all the credit and saving business of their member societies. Already the deposits of this bank have shown remarkable growth, while credits are cheaper than in other banking concerns. It is anticipated by its promoters that the "Workmen's Bank" will soon become one of the most important banking centres of Austria. Dr. Renner, formerly Chancellor of the Republic, is its president.

REPORT OF FACTORIES INSPECTOR FOR UNITED KINGDOM

THE report of the Chief Inspector of Factories and Workshops of the United Kingdom for 1920 gives the number of registered factories as 140,064, and of registered workshops as 141,971. An increase in "factories" and a decrease in "workshops" has been almost continuous for many years. The number of persons employed in factories in 1913 and in 1919 (the last year for which complete figures are available) is shown in the following table:

	Year 1919			Total in 1913
	Males	Females	Total	
Cotton.....	205,589	386,920	592,509	591,753
All textiles.....	404,680	759,487	1,164,167	1,058,854
Metal work.....	1,930,241	225,053	2,155,294	1,632,136
Other factories...	1,429,413	786,323	2,215,736	2,059,882
All factories.....	3,969,923	2,157,783	6,127,706	5,342,625

In the section of the report dealing with safety and welfare work, it is stated that a large proportion of such work as the standardizing of safety precautions is now carried on through voluntary agreements which have been entered into by Joint Industrial Councils, or have resulted from negotiations between representatives of the employers and workers. Such agreements have been reached, for example, in the cotton, woollen and worsted, printing, bleaching and dyeing, and tinsplate industries. On this phase of the work of the Joint Councils the Chief Inspector says: "We welcome such co-operation between the Department and the industries; and such meetings and discussions can do more to improve working conditions than can ever be achieved by legislation alone; provided, of course, that when agreements are arrived at, individual occupiers will take the necessary steps to see that they are carried out. This is the crux of the whole matter; and the only sure means to this end is the appointment of some responsible person, or of a Works Committee,

charged with this duty. The movement regarding Works and Safety committees, though slow, is progressing, and in some districts the progress is substantial. While voluntary agreements work satisfactorily, the Chief Inspector prefers that they should not be enforced by statute, but form a standard to which firms may be expected to conform.

Prosecutions under the Factory Acts showed a marked decline in 1920 from the level of 1914, especially for offences such as employment of women or children at illegal hours, or without a certificate of fitness; but considerable slackness is noted in fulfilling safety regulations.

No attempt is made in the report to reconcile conflicting statements as to the effect on output of the reduction in working hours in many industries during the year. It is noted, however, that the workers are showing an increasing aversion to "overtime." Improved organization, moreover, has made overtime less essential than formerly. Longer spells of work result in many industries from the gradual abandoning of the practice of two breaks during the day for meals. Some employers allow as a substitute for the second break an interval of five or ten minutes during which light refreshments are provided at a small charge, or the workers are allowed to go to the canteen. "Most employers," it is stated, "are satisfied that there is no loss of output thereby, and that the efficiency of the workers is increased." Two breaks for meals are still allowed, however, in the woollen and worsted trades of Yorkshire and in some other trades.

Accidents reported during the year under the Factory and Workshop Act numbered 138,702, of which 1,404 were fatalities. This represented an increase of 12,750 accidents over those of 1919. The number, however, was still considerably below the level of 1913. Nearly 80 per cent of the accidents and nearly

90 per cent of the fatal accidents, were to adult males, and 13 per cent of the total and 9 per cent of the fatal accidents were to "young male persons." No fatal accidents were reported among children.

The section of the report dealing with industrial diseases shows a reduction in cases of lead poisoning from 1,058 in 1900 to 243 in 1920, this reduction being chiefly in the pottery trades and in white and red lead manufacture. Deaths

from the same cause declined from 38 in 1900 to 23 in 1920, the china and earthenware trade being chiefly responsible for recent fatalities, though it is explained in the report that all the fatal cases involved employment for many years under the old conditions. Special attention was given in 1920 to lead poisoning in the electric accumulator industry, in which "plumbism" has become more common than in any other industry.

REPORTS OF BRITISH LABOUR COMMITTEE ON COST OF LIVING

Analysis of prices statistics and the conditions affecting the cost of living, by Joint Committee of Labour Bodies in the United Kingdom

IN the early part of 1920 a Joint Committee was set up by various labour bodies in the United Kingdom to investigate the cost of living. The Committee was composed as follows: *Parliamentary Committee, Trades Union Congress*; E. L. Poulton, J.P., (chairman), Rt. Hon. J. H. Thomas, M.P., R. B. Walker, Rt. Hon. C. W. Bowerman, M.P., (secretary), F. Bramley, (assistant-secretary). *The Labour Party*; C. T. Cramp, J. Ramsay MacDonald. *The Co-operative Union*; Mrs. M. E. Cottrell, J. Dickinson. *The Triple Alliance*: R. Smillie, J.P., Frank Hodges, J.P., *The Federation of Engineering and Shipbuilding Trades*; A. A. H. Findlay, A. Gossip. *The National Federation of General Workers*; Mrs. F. Harrison Bell, A. Hord. *The National Federation of Building Trades Operatives*; T. Otley, G. Hicks. Mr. Arthur Greenwood acted as secretary of the Joint Committee.

The Committee has recently presented its final report on the cost of living. This was preceded by two Interim Reports, one on money and prices and the other on wages and prices.

Interim Report on Money and Prices

The Interim Report on Money and Prices, issued before the cost of living

had begun to fall, advocated, amongst other things, the gradual deflation of currency; the development of productive capacity; the repayment or funding of the floating debt; the public control of the banking system and the cessation of Government expenditure upon military and naval enterprises. In connection with the international situation, reference was made to the necessity for the re-establishment of peace; the desirability of defining war indemnities, within reasonable amounts; the need for rehabilitation of currency, and the advisability of establishing a new parity where a return to the gold standard was impracticable. Barter was suggested as a temporary means of exchange, and an international loan for impoverished countries was advocated.

Report on Wages and Prices

The Report on Wages and Prices, which appeared somewhat later, was a reply to a memorandum circulated by the Federation of British Industries—an organization of manufacturers. Among the points in the Federation's memorandum seized on for criticism by the Joint Committee were the apparent assumption that increases in wages were a large factor in the rising cost of living, the statement that reduced working

hours were a large factor in decreased output, and the claim that Government price fixing was bound to fail. As regards wages and prices the Joint Committee claimed that, in general, applications for wage increases had been made in order to meet a previous rise in the cost of living. In the matter of price regulation, instances were given by the Committee where control allowed fair profit during the war, and the removal of such control while conditions were still abnormal resulted in excessive profits. Increased output, the Committee claimed, would depend not merely on applying the "maximum pressure" to labour or machinery, but on increased efficiency in industrial management. The Committee also stated that capitalist enterprise was guilty of deliberate restriction of output, and made reference to the extravagant overpayment of the capitalist class for its services. In conclusion the Committee reiterated the necessity of the establishment of international peace, the reform of continental currencies, and the flotation of an international loan or its equivalent.

Final Report on the Cost of Living

Part I of the Final Report contains the results of the Committee's inquiry into the increase in cost of living, and a criticism of the official index number of cost of living issued by the Ministry of Labour. This is reviewed at the end of this article, in conjunction with the Ministry's reply. Part II deals with various factors in the cost of living, and under this heading specifies profiteering, combinations and monopolies, inefficiency in industry, and restriction of output.

The section on profiteering quotes freely from reports of the various committees and sub-committees set up under the Profiteering Acts, and endeavours to show that in some cases at least strenuous efforts were made by the firms or industries into which investigations were being made to withhold relevant information. The section contains a large number of tables of profits made by firms in various industries. The

question of multiplicity of profits through the interposition of middlemen also receives treatment.

In the section on combinations and monopolies much attention is given to the reports of the Committee or Trusts appointed by the Minister of Reconstruction, and of its sub-committees for the different industries. The section concludes with the opinion that "supplies and prices will be determined more and more by combinations, and that, therefore, some constructive policy is necessary if the public is not to be left at their mercy."

Under the heading of inefficiency in industry the view is expressed that the efficiency of British industry is far below what is reasonably possible, owing to unenlightened management. The section deals with such matters as methods and machinery, the layout of factories, heating, lighting and ventilation, and the conclusion is expressed that "output (in the United Kingdom), could be increased considerably to the benefit of the consuming public and without throwing any further burden on the workers, if industrial management were more intelligent."

The section on restriction of output discusses such restriction on the part of the employers and of the workers. As to the former it is pointed out that "it is not the object of capitalist industry to produce goods in abundance; its primary object is to make profits for investors of capital." Powerful combinations, it is stated, may of set purpose decide to diminish output in order to maintain prices. The Report holds that the reason for restriction of output of a more or less deliberate character on the part of workers is to be found in the industrial system itself. To avoid it, security of tenure for the worker is necessary; he must be assured of "work or maintenance." The present industrial system is also stated to be outworn, and "repugnant to a large section of those whose co-operation is essential to its working."

Part III of the Final Report contains the constructive proposals of the Joint

Committee, which are summarized at the end of the report as follows:

CONSTRUCTIVE PROPOSALS.

Capital, which is now the taskmaster of the producer and the exploiter of the consumer, must become the servant of both. The public, as producers, consumers and citizens, are vitally concerned in the economic system. But their fundamental interests can be assured only when it is recognized that industry was made for man and not man for industry, and that industry and commerce must be subordinated to the common weal. This, we suggest, can be achieved by—

- (a) public ownership—national and local;
- (b) voluntary co-operation;
- (c) public regulation of the economic system.

(a) Public Ownership.

The arguments brought against public ownership—that it is bureaucratic, inefficient, and destroys initiative—can be levelled against capitalism. It it were true that nationalization spelt inefficiency, bureaucracy and stagnation it would stand condemned; but we accept the alternative view that public ownership, with which producers and consumers were directly associated would provide either a cheaper service or a better service for the same money. We refer to the nationalization of the land, railways, coal mines and electricity supply, to public banks and to the nationalization of a manufacturing industry—the wool textile trades.

We suggest that the State should become a merchant and import staple commodities. Purchases for public use, whether by national or local authorities, should be co-ordinated by a Ministry of Supply.

(b) The Co-operative Movement.

The large and growing co-operative movement is the only real remedy which the consumer has at present against exploitation by private industry.

It is not our purpose to attempt to estimate the relative positions which will be occupied by publicly owned services and co-operative enterprises in the future, but we are satisfied that in the interests of the whole body of consumers, the extension of both public ownership and voluntary co-operation is greatly to be desired.

We regret that the Ministry of Health has not shown greater sympathy with the Building Guilds and given local authorities greater encouragement to utilize the services of the Guilds for housing schemes. In so far as the Guilds eliminate private contractors and produce better and cheaper houses, they will prepare the way for a more comprehensive scheme based on public ownership, whilst they will provide the workers with a necessary experience in management and

equip them with a knowledge of the problems involved in the control of industry.

(c) Public Regulation.

We wish to draw attention to the need for the utmost publicity in industry and commerce.

All businesses over a certain size should be required to publish each year a statement of their accounts in a form (which would probably vary from industry to industry) prescribed or approved by the Board of Trade, together with other relevant information as required by the Board of Trade.

Every firm should be required to keep records of costs on a method prescribed or approved by an Accounting Department attached to the Board of Trade.

There should be from time to time detailed inquiries into different industries, and the reports of the inquiries should be published.

There should be established in the Board of Trade a permanent Consumers' Council, which should consider the evidence concerning costs and prices and advise the Government on any further action which the Council thought advisable.

Though the Government has repeatedly promised to introduce legislation concerning combinations, it has not fulfilled its promises.

We have already suggested that in industry as a whole there should be full publicity, and combinations would obviously be no exception. We have proposed detailed inquiries into industries, and such investigations would include inquiry into combinations.

Further, we suggest that each monopolistic undertaking should, after inquiry, be allowed a certain dividend, and that higher dividends should be conditional upon lowering the prices of its products.

The Board of Trade should publish an annual report on combinations, giving detailed information as to combinations in existence, interlocking directorates, international arrangements by combinations, and other similar subjects.

The Economic Section of the League of Nations should investigate the operations of all combinations of an international character and submit annual reports of its inquiries. Moreover, there should be a Standing Committee of the Economic Section of the League which should make recommendations for action by individual States.

It should be made a penal offence to give short weight or measure.

The fall in prices which has taken place is not the result of either the restoration of international trade or a reduction in costs of production. Private industry has worked itself to a standstill by a short-sighted policy of high prices and high profits. The fall in prices has taken place in the way which we anticipated. The cost of

living has been reduced, but the workers are paying the price of this fall in unemployment and lower wages.

A healthy and permanent fall in prices must depend upon the adoption of the policy outlined in our Reports. It is inevitable that international trade intercourse should increase and to

that extent prices should fall. But we cannot be certain that the consumer will enjoy the advantages of as large a fall in the cost of living as we believe to be possible, unless there is strong pressure on the part of the public in favour of measures for eliminating the extravagant toll levied by the capitalist and increasing the efficiency of industry.

Criticism of Ministry of Labour's Cost of Living Figures

Part I of the Final Report of the Joint Committee contains a criticism of the index number of the cost of living issued by the Ministry of Labour. The figures published for September, 1920, are considered in detail, and are compared with the results of a budget inquiry conducted by the Committee itself. In each case the month of July, 1914, is taken as the base, and the increase in the cost of living in September, 1920, over that at the base period is expressed as a percentage of the latter. The two sets of figures are as follows:—

TABLE A.

SEPTEMBER, 1920,
PERCENTAGE INCREASE OVER JULY, 1914.

	Ministry of Labour.	Joint Committee on Cost of Living
Food.....	167	176
Clothing.....	330	313
Rent and rates.....	35	43
Fuel and light.....	135	198
Other items.....	130	270
All items.....	161	189

The official figures purport to show the increase in the cost of maintaining unchanged the average pre-war standard of living of the working class. The Committee takes the ground that the weights assigned to different expenditures by the Ministry of Labour are based on an enquiry made by the Board of Trade in 1904, and argues that since that time there have been changes in working class habits, which have been reflected in the character of working class expen-

diture. It is claimed, for instance, that there has been an improvement in dress and house furnishings. The relative weights assigned by the Committee to the various groups are therefore intended to represent the percentage expenditures on these groups in September, 1920.

The Committee's figures are based on information obtained from family budget forms sent out in large numbers to Trade Unionists, members of the Workers' Educational Association, Adult Schools and Women's Co-operative Guilds. The retail prices used in the calculations have been largely obtained from the Co-operative Wholesale Society and the Co-operative Union, Limited, supplemented from other sources.

The Committee's criticism of the official figures and the explanation of the large difference of 28 points between the official calculation and that of the Committee, both purporting to be for the same month, may be divided into two parts; the computation of the percentage increases in the different groups—food, clothing, etc.—and the consideration of the weights assigned to each group in calculating the index number for all groups. The percentage increase in each group may first be considered.

Food.—Taking prices for its food budget as at September, 1920, and working back to the prices for the same commodities in 1914, the Committee places the increase in this group at 176 per cent, as compared with 167 per cent shown by the Ministry of Labour's budget.

Clothing.—The increase of 330 per cent in clothing prices shown by the Ministry of Labour, harmonizes with

the results of the Committee's enquiry and this figure is accepted. But the Committee included an estimate of the increase in cost of boot repairs placing it at 200 per cent, and weighting each item according to its importance, finds that the cost of clothing, including boot repairs has increased only 313 per cent.

Rent and Rates.—In showing the increase in rents as 43 per cent, instead of the Ministry of Labour's 35 per cent, the Committee takes the stand that in September, 1920, the rise in rents was on the whole as high as was permitted under the Rent Restriction Acts.

Fuel and Light.—Under this heading the increases shown by the Joint Committee for the particular articles are in substantial agreement with the Ministry of Labour's figures, except in the case of coal, where the Committee claims that the increase was 225 per cent, as compared with 145 per cent shown by the official figures.

In combining the figures the Committee claims that the weights used by the Ministry of Labour give too much prominence to gas, which had undergone the slightest increase, and too little to oil, candles, matches and firewood, which had risen in much greater ratio. The changes in weighting made in this respect by the Committee, together with the greater increase claimed for coal, results in an increase of 198 per cent for the fuel and lighting group, as compared with 135 per cent shown by the official figures.

Other Items.—In computing the increase under this heading, the Committee does not compare prices of certain items in 1914 with those of the same items in 1920, but taking the estimate of Lord Sumner's Committee for insurance, fares and sundries in 1914, and comparing it with the average shown for "other items" by the Committee's budgets in 1920, due allowance being made for the slight difference in the size of the families involved, the increase is placed at 270 per cent, instead of 130 per cent, as shown by the Ministry of Labour.

Weighting.—When the percentage increase for each group has been obtained, it is necessary, in order to combine these increases into one index number which will represent the general increase in cost of living, to assign weights to the different groups according to their relative importance. It is claimed by the Committee that the weights used by the Ministry of Labour are based upon the results of an inquiry made in 1904 and are not in accordance with the post-war apportionment of expenditure. Thus, it is argued, rent and rates which, owing to legislative restrictions, advanced in much lower ratio than other groups, have been given undue importance by the Ministry's system of weighting, while the importance of clothing and "other items," for which the percentage increases from 1914 to 1920 were much greater, have been unduly minimized.

Reply of Ministry of Labour

The British *Labour Gazette* for September, 1921, contains a reply to the criticism made by the Joint Committee. This reply may also be considered under the group headings, the matter of weighting being treated last.

Food.—The Ministry denies the accuracy of the Committee's price for fresh

milk in 1914, claiming that it is too low and thus exaggerates the increase; an obvious error in the Committee's figures for condensed milk is pointed out which would produce a similar effect; and attention is drawn to the fact that the Committee's budget, while showing the cost of currants and raisins and egg substitutes in 1920, contains no figures

for these items in 1914, and therefore makes it appear that they were obtained free in that year. It is claimed that with these errors removed the Committee's food prices, instead of showing an increase of 176 per cent between July, 1914, and September, 1920, would reduce this figure to approximately 167 per cent, the official figure which the Committee had criticized.

Clothing.—As regards the increase in cost of clothing, the Committee stated that the figure shown by the Ministry of Labour harmonized with the results of its own inquiry. The Committee even reduced this figure from 330 to 313 per cent by taking boot repairs into consideration, so that as the Committee's general complaint against the Ministry's index number was that it showed too small an increase, there is no dispute on this score.

Rent and Rates.—The comparatively small increase in rents was due to restriction of increases by legislative enactment. An Act was passed in 1920 amending these restrictions and allowing certain increases, and the Ministry of Labour now points out that the Committee, in representing the increase in September, 1920, as 43 per cent above the level of July, 1914, assumed that within one month of the earliest date at which increases under the new Act could be put into force, the rents of all working class houses had been put up to the legally permitted maximum. The Ministry claims to be in possession of a large volume of evidence showing that in a considerable proportion of cases the permitted increases were not imposed until after September 1, 1920, and it was on such evidence that the Ministry had based its estimate of a 35 per cent increase in rents and rates.

Fuel and Light.—Under this heading practically the only difference regarding the amount of increase in a particular commodity is in coal. The Ministry had shown an advance of about 145 per cent, which the Committee claimed should be 225 per cent. The Ministry now, in support of its figures, names its sources of information for pre-war prices, and refers to the Board of Trade Report on Cost of Living in 1912 for confirmation of its figures.

The Ministry also claims that, in combining the prices of articles under this group (coal, gas, and oil, candles, matches, and firewood), into one index number for the group, the Committee has used a method which is arithmetically inadmissible. This consists in multiplying the percentage increases for the different commodities by their comparative weights in 1920 instead of their weights in 1914, and results in exaggeration of the group increase. The Ministry holds, therefore, that if this error were eliminated the group increase, even if the Committee's coal figures were accepted, would be reduced from 198 per cent to 183 per cent. The difference between the latter figure and the official figure of 145 per cent appears to be mainly due to the disagreement as to the increase in coal prices.

Other Items.—As already stated, the method used by the Committee to ascertain the percentage increase in these miscellaneous expenditures was by a comparison of the findings of the Sumner Committee in 1914 with the average expenditures under this heading in September, 1920, as obtained from the Committee's Budget inquiry. The Ministry of Labour points out, however, that in the Sumner report the term "sundries" includes articles which the

Committee has already included elsewhere, while the "other items" group in the Committee's report includes expenditures on many things entirely excluded from the Sumner Committee's calculations. It is therefore, maintained that the Committee has based the alleged percentage increase in this group on the comparison of a 1914 total with a 1920 total which was composed largely of items of a different nature. As such, the Ministry regards the conclusions reached as completely fallacious. The Ministry's figures for this group, which showed an increase of only 130 per cent, were obtained from a comparison of the same items in both years, though it is admitted that these items do not cover the whole field of miscellaneous expenditures, owing to the necessity of including "only articles of which the changes in price can be definitely ascertained, and which are also of general and recurring use."

Weighting.—The extent to which the Committee considered that the weights assigned to the various groups were responsible for the discrepancy between the official index number and its own is indicated by the following quotation from its report (p. 38):—

"To summarize the result of our investigation, we find that the cost of living in September, 1920, was 189 per cent above the level of July, 1914, or 28 points higher than the index number of the Ministry of Labour. The difference between the two figures is due to:

(I.) The 'over-weighting' of rent and rates by the Ministry of Labour;

(II.) The 'under-weighting' of clothing and 'other items';

(III.) The under-statement by the

Labour Department of the increase in the prices of certain items."

The manner in which the Ministry of Labour deals with the criticism in (III) has already been summarized; the nature of the defence which it makes of its system of weights may now be outlined.

In the first place, the Ministry points out, it is always definitely stated in the *Labour Gazette* that the index number is designed to show the average increase in the cost of maintaining unchanged the pre-war standard of living in working class families. For this purpose it is necessary that the weights used (to which the percentage increases are applied) should be based on the pre-war budget.

It is stated, also, that a large part of the Committee's criticism of the Ministry's weights is based on a misconception of the nature of weights and their use in making an index number. The Committee makes the following comparison (p. 17) of its own weights assigned to the different groups, and those of the Ministry:

TABLE B.

	Committee on Cost of Living per cent	Ministry. of Labour. per cent
Food.....	52.41	60
Clothing.....	19.51	12
Rent and rates....	6.84	16
Fuel and light.....	6.34	8
Other items.....	14.90	4
	100.00	100

If this comparison were permitted, it might be judged to support strongly the Committee's contention that "rent

and rates" are over-weighted by the Ministry, while "clothing" and "other items" are under-weighted. But the Ministry maintains that such a comparison is improper and is founded on the idea, apparently held by the Committee, that the Ministry's weights have not changed between 1914 and 1920. Such an idea is shown to be quite erroneous. As a result of varying percentage increases for the different groups the expenditures for these groups do not maintain the same proportions towards one another in 1920 which they had in 1914. Clothing, for example, which increased most in price, takes a larger share of the family expenditure in 1920, than in 1914; while rent and rates, which remained most nearly stationary, form a much smaller part of the budget in the later than in the earlier year.

(It may be of interest, in connection with the above argument, to include here a table—Table C, below—published by Professor A. L. Bowley in the September issue of the *Economic Journal*, London, which makes a comparison of

TABLE C.

PROPORTIONATE EXPENDITURE IN DIFFERENT GROUPS.

	Committee, 1920.	Ministry, computed for 1920.
Food.....	52.41	61.3
Clothing.....	19.51	19.7
Rent.....	6.84	8.3
Fuel and light....	6.34	7.2
Other items.....	14.9	3.5
	100.00	100.0

observed that while, for reasons already given, the Ministry's weight for "other items" is much less than that of the Committee for the same group, there is no large difference in the weights assigned to "clothing" or "rent and rates.")

The Committee's misconception of the official weights is attributed by the Ministry to the fact that when the percentage increases for the different groups are ascertained, the multipliers used with these to obtain the average increase for the combined groups are the weights of July, 1914. This is necessary when prices for another month are being expressed in terms of those for July, 1914, just as it would be necessary to use the weights of September, 1920, if prices for July, 1914, were being expressed in terms of those for September, 1920. The point is purely arithmetical and the Ministry shows that the Committee, in forming its final index number, has of necessity followed the same method.

As evidence of the slight extent to which the difference in weights is responsible for the discrepancy between the Ministry's index number and that of the Committee, the Ministry points out that if the Committee's weights, although derived from a post-war budget, were substituted for those of the Department in the construction of the official index number for September, 1920, the month under discussion, the number would be affected only to the extent of 4 points (i.e., 161 would become 165). By far the greater part of the difference of 28 points is, therefore, due to the disagreement regarding the percentage increases of the different groups, as shown in Table A above.

the Committee's and Ministry's weights, both at September 1920. It will be

FAIR WAGE CONTRACTS, SEPTEMBER, 1921

DURING September the Department of Labour received for insertion in the *Labour Gazette* the following information relative to sixteen fair wage contracts, of which fifteen were awarded by the Department of Public Works, and one by the Department of Railways and Canals. All the contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuse and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulations for the suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.— Extension to East Pier, Bailey's Brook, N.S. Name of contractor, Denton & Condon, Digby, N.S. Date of contract, August 22, 1921. Amount of contract, \$3,890.

Extension to Wharf, The Pas, Man. Name of contractor, L. Berry, Brandon, Man. Date of contract, August 29, 1921. Amount of contract, schedule of prices.

Construction of wharf, Sandspit, B.C. Name of contractor, McDonald, Watson & Wither, Victoria, B.C. Date of contract, August 27, 1921. Amount of contract, schedule of prices.

Alterations and additions to Military Hospital, Ste. Anne de Bellevue, Que. Name of contractor, Quinlan, Robertson & Janin, Ltd., Montreal, Que. Date of contract, September 9, 1921. Amount of contract, \$8,990.

Dredging basin at Government Wharf, Belleville, Ont. Name of contractor, The Frontenac Dredging Company, Ltd., Belleville, Ont. Date of contract,

September 2, 1921. Amount of contract Class "B" p.c. yd.—65c (in situ).

Construction of wharf, Alice Arm, B.C. Name of contractor, W. T. Muse, Prince Rupert, B.C. Date of contract, September 3, 1921. Amount of contract, schedule of prices.

Grading, paving roads, etc., in connection with Educational Block, Military College, Kingston, Ont. Name of contractor, T. S. Scott, Kingston, Ont. Date of contract, September 13, 1921. Amount of contract, \$21,400.

Workshop and wireless buildings at Air Station, High River, Alta. Name of contractor, Percy Taylor, High River, Alta. Date of contract, September 9, 1921. Amount of contract, \$9,715.

Completion of platform for Air Station, Victoria Beach, Man. Name of contractor, William John Wood, Winnipeg, Man. Date of contract, September 14, 1921. Amount of contract, \$2,316.

Construction of Customs and Telegraph Building, Bamfield, B.C. Name of contractor, Geo. Calder, Victoria, B.C. Date of contract, August 31, 1921. Amount of contract, \$9,535.

Oil engine and generator in Power House, Quarantine Station, William Head, B.C. Name of contractor, W. W. Fraser, Vancouver, B.C. Date of contract, September 17, 1921. Amount of contract, \$9,400.

Construction of training and landing pier, Rivière du Lièvre, Poupore, Que. Name of contractor, W. H. Kelly, Buckingham, Que. Date of contract, September 23, 1921. Amount of contract \$9,176.

Revetment of masonry arch, Chaudière Bridge, Ottawa, Ont., and Hull, Que. Name of contractor, Grant Bros., Ottawa, Ont. Date of contract, September 24, 1921. Amount of contract, \$3,389.

Power, disinfecting and bath-house for Quarantine Station, Partridge Island, N.B. Name of contractors, J. S. Parker and J. E. Kane, St. John, N.B. Date of contract, September 21, 1921. Amount of contract, \$82,950.

Supply and installation of steam boilers (Royal Mint), Ottawa, Ont. Name of contractor, McKinley & Northwood, Ltd., Ottawa, Ont. Date of contract, September 27, 1921. Amount of contract, \$10,240.

DEPARTMENT OF RAILWAYS AND CANALS.

The work incident to the construction and completion of the substructure of the Hamlet Bridge, so called, on Section 3 of the Severn Division of the Trent Canal, with certain contingent dredging. Name of contractors, The Randolph MacDonald Co., Ltd. Date of contract, September 3, 1921. Amount of contract, schedule rates

POST OFFICE DEPARTMENT.

The following is a statement of payments made in September for supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages and the performance of work under sanitary conditions.

Nature of Order.	Amount of Order.
Making metal dating stamps and type and other hand stamps, and brass crown seals.	\$ 635.75
Making and repairing rubber stamps, daters, etc.	177.44
Supplying mail bag fittings.	6,795.91
Making up and supplying letter carriers' uniforms, etc.	16,948.60
Repairing letter boxes, etc.	17.55
Making and supplying stamping ink, pads, etc.	453.00
Repairing scales.	543.75

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Similar agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement the rates of wages for principal classes of labour are given, with other information of general interest.

Food, Drink, Tobacco

PETERBOROUGH, ONT.—MASTER BAKERS, AND BAKERY AND CONFECTIONERY WORKERS' UNION No. 281. Agreement

to be in effect from June 30, 1921, to June 30, 1922.

Cake bakers: Hours per day, nine. Minimum wage: Per week—cake and candy foremen, \$33; cake bakers and candy bakers, \$28.50; overtime, time and one-half. Pay for all holidays, with allowance of not more than four hours on day previous or on holidays.

Bread Bakers: Hours: Night workers, eight; day workers, nine. Friday night, ten hours or under with first two hours over 10 hours, straight time. Thereafter, time and one-half. Overtime in general and holidays, time and one-half. Minimum wage: Per day or night; night foreman, \$5.50; ovenmen, \$5; dough makers, \$5; machine and bench hands, \$4.75; helpers, \$3.75.

Jobbers, 75 cents per hour for one or two nights or days and under. If employed over two nights or days in succession during any one week, regular rating.

Shop rules for all bakers: Only union members to be employed, if available. Not more than one apprentice or one helper to two journeymen; apprentices' hours to be controlled by the union. Helpers to do only general labour about shop, at no time to touch dough or doughs in course of manufacture. One union foreman to be employed in each shop regardless of number of employees, certain exceptions to this rule being stated. Union to have right to classify employees in each shop with exception of foreman.

VANCOUVER, B.C.—FRASER VALLEY DAIRIES LIMITED, AND TEAMSTERS' UNION No. 464, MILK DRIVERS AND DAIRY EMPLOYEES. Agreement in effect from June 15, 1921. "In the event of the price of butter being the same as or higher on December 15, 1921, than on June 15, 1921, agreement to be automatically continued until June 15, 1922. Both parties to give 30 days' notice of proposed change," otherwise agreement to continue in effect.

Union members to be employed unless suitable [special] workers are desired by the employers or union men of good standing are unavailable. Non-union men to make application within two weeks for membership in union. Applicant not to be denied membership because a member is out of employment. Route inspectors and heads of departments not to belong to the union.

Employer reserves right to discharge any employee for drunkenness, dishonesty, incompetency, absence without leave, smoking, or drinking intoxicating liquors while on duty.

Employees to provide their own working apparel other than aprons.

No workman to be discharged or discriminated against for upholding union principles.

One day off in seven, or one week off in seven, according to decision of employer. A driver's day's work to be considered accomplished when he has finished his route in a satisfactory manner. In case of an employee's holidays being postponed for a considerable

period, payment may be requested for time due to help other than drivers, a day's work to be eight hours; overtime time and one-half.

After an accident or breakdown, men to be given a fair hearing.

Union at all times as far as in its power, to further the employer's interests. Employer to notify all new employees that it is necessary for them to call at union office and sign a copy of this agreement.

Either side to give seven days' notice of discharge or resignation.

Meetings to be called each month by management for discussion of problems of interest to dairy salesmen.

Local union agrees to fine or suspend members charged with drunkenness, dishonesty or incompetency while on duty.

Employer not to be compelled to pay overtime for breakdown of machinery beyond his control; men to be notified of lay-off; men to be paid for standing by, with overtime for period over eight hours, no lay-off to be less than two hours.

In event of a strike among employees of any other firm with which employer, party to this agreement is doing business, employees of this firm not to be asked to perform any extra labour, but to perform their usual share as if strike did not exist.

Wages: Per month—driver salesmen, (retail) \$52.25; truck drivers, \$120; truck helpers, \$110; checkers, \$115; stable helpers, and other inside help, \$110; inside relief men, \$115; outside relief men, \$150. New employees, without experience, first three months, \$5 less than scale. Driver salesmen, retail, to receive points (three points equal one cent) on sales, and be paid commission accordingly in addition to monthly wage. In event of any load being split, driver to receive same wage as month previous for a period of two months. This to apply only to an employee who has increased his own load 12 per cent.

No cessation of work or lockouts and no sympathetic strikes during term of agreement.

In case of controversy, men to continue to work, controversy to be adjusted if possible between representatives of both sides, or submitted to arbitration board consisting of one from each party and a third disinterested person, decision to be final and binding.

Iron and Steel

CALGARY, ALBERTA.—VARIOUS CONTRACT SHOPS, AND MACHINISTS' UNION No. 357. Agreement to be in effect from October 7, 1921, with thirty days' notice of change.

Hours: First five days, eight; Saturdays, four; night shifts, seven and one-half hours, five nights per week, paid for 44 hours.

Overtime, first four hours, time and one-half; thereafter and Sundays and holidays, double time.

Minimum wages: Per hour—machinists, 77 cents; specialists, 63 cents; rough drillers and helpers, 54 cents; apprentices 1st year, 27 cents; 2nd year, 32 and 36 cents; 3rd year, 41 and 45 cents; 4th year, 54 and 63 cents.

Apprentices to serve four years and to be advanced at all branches of the trade, not more than one being employed for five journeymen.

Preference of employment to be given to union men; non-union men may be started in event of union being unable to supply required help.

Grievances which cannot be adjusted by chairman of shop committee and foreman to be taken up with management by shop committee after shop hours.

Pulp, Paper and Printing

MERRITTON, ONT.—LINCOLN PAPER MILLS COMPANY, LIMITED, AND INTERNATIONAL BROTHERHOODS OF PULP, SULPHITE AND PAPER MILL WORKERS, OF PAPER MAKERS, OF STATIONARY FIREMEN AND OILERS AND OF MACHIN-

ISTS. Agreement to be in effect from August 16, 1921, to August 16, 1922. Agreement is similar to that previously in effect, as summarized in the LABOUR GAZETTE for January, 1921, page 87, with the following changes:

Either party to agreement can reopen the wage scale by giving thirty days' notice. If no settlement can be reached, question at issue to be left to arbitration.

Wages: Per hour—Sulphite, 48-hour week—cooks, acid makers, wet room foreman, 70 cents; helpers, pulp loader, screenman, blowpit man, screenings man, 50 cents; storeman, helper or oiler, lap cutter, tally man, 52 cents; belmar man, 55 cents; wood room foreman (50 hours); 75 cents; wood room oilers (48 hours) 60 cents; chipper men (48 hours) 52 cents; all others in wood room (48 hours) 50 cents. The following work 50 hours: Yard foreman, 63 cents; yard labourers, 48 cents; head pulp loader, 55 cents; head millwright, 75 cents; machinist and millwright, 70 cents; electricians and helpers, 55 cents; pipe-fitter, bleach liquor man, head fireman, 70 cents; firemen, 60 cents; helpers, 50 cents. ST. CATHARINES, ONT.—LOCAL EMPLOYING PRINTERS, AND TYPOGRAPHICAL UNION No. 416. Agreement to be in effect from July 1, 1921, to June 30, 1922.

Wages: Per week—newspaper scale, advertisement floor and make-up men, and typesetting machine operators, day, \$33; night, \$35; machinist operators and foremen, day, \$35; night, \$37; book and job scale, hand and floor men, day, \$33; night, \$35. Other classes, same as newspaper scale.

Remainder of agreement same as that previously in effect as in LABOUR GAZETTE for October, 1920, page 1382.

VERNON, B.C.—EMPLOYING PRINTERS, AND VERNON TYPOGRAPHICAL UNION No. 541. Agreement in effect from May 1, 1921, to December 31, 1921, and thereafter unless terminated on thirty days' notice.

Only union members to be employed.

Scale of prices to continue in effect during life of agreement, except when a change is mutually agreed upon.

No work from or for unfair offices.

Foreman of composing room to select, supervise, control and discipline employees. None but journeymen union members or regular apprentices to handle type in composing room.

Hours of work, eight per day for hand compositors and floormen; seven and one-half hours for machine operators and for all night work. Forty-four hours to constitute a week's work; time in excess of eight hours per day, or of four hours on a weekly half holiday, double time.

Wages: Per week, hand compositors, machine operators, floormen, days, \$40.-50, nights, \$44.10; foremen and machinist operators, \$3 extra per week.

Any award handed down setting rate of pay in Vancouver commercial offices to become scale for this union.

Overtime and holidays, time and one-half; Sundays, double time.

Machine learners: one to each office; to be journeymen members of union

for at least three months prior to taking apprenticeship.

Scale, per week—first four weeks, \$19.50; second four weeks, \$22.50; third four weeks, \$25.50; fourth four weeks, \$28.50; last four weeks, \$31.50.

Apprentices: Each office to have one apprentice to five journeymen, not having more than two. On an apprentice reaching his fifth year, office to be allowed to put on a junior apprentice. Apprentices to be not less than fifteen years of age; to have common school education; to be examined after six months and, if qualified, to continue apprenticeship; to be given every opportunity to learn the trade. Beginning with first week of third year, apprentice to pay to secretary-treasurer of union 50 cents per week for taking I. T. U. course in printing.

Disputes to be referred to a committee of one representative of the office, one of the union or chapel, and if necessary a chairman to be appointed by these two.

Textiles and Clothing

TORONTO, ONT.—A LOCAL FIRM, AND CANADIAN CARPET WEAVERS' BENEFICIAL ASSOCIATION No. 1.—Agreement in effect from October 7, 1919.

"This organization may be affiliated with the organizations of Guelph and Peterboro, but no other union or organization in Canada, United States or Great Britain, and will take part in no labour demonstrations or processions."

Disputes to be settled by the Company and officers of the Association; failing this, by an arbitration board of one member from each party and a third selected by them.

MONTREAL, QUE.—CLOTHING MANUFACTURERS' ASSOCIATION OF MONTREAL, INCORPORATED, AND THE AMALGAMATED CLOTHING WORKERS OF AMERICA. Agreement to be in effect from June 16, 1921, to May, 31, 1922, and from year to year unless thirty days' notice be given in writing.

Administration vested in a board of arbitration together with such deputies, officials and representatives of the parties as may be appointed.

Board of arbitration to have jurisdiction of all matters arising under this agreement, decisions to be conclusive; board to consist of three members—one selected by each party and the third (chairman) selected by mutual choice.

Board's duty to be to investigate and mediate or adjudicate all matters that are brought before it, doing all in its power to ensure the successful working of this agreement. Board to have absolute power to deal with any question.

Salary and expenses of impartial chairman to be borne equally; same to preside at all meetings of the board; to assist in investigating complaints except when representatives of the parties can adjust the matter themselves, to mediate, and to cast the deciding vote.

Board to meet when chairman shall direct. Should either or both sides fail to send representatives, chairman to act as though both were represented.

Each shop to have a shop chairman to have charge of complaints and organization matters within the shop; to receive and enquire concerning complaints, and perform duties which may be imposed on him by the union.

Grievances to be reported to shop chairman and taken up with shop foreman and superintendent. If a settlement is not promptly agreed upon, matter to be reported by shop chairman to his deputy. Complaints filed with representatives of workers to be taken up with those of employers, and in event of failure to agree, matter to be submitted to the board.

Hours of work: 44 per week. For work in excess of regular hours per day, overtime to be paid to piece workers of 50 per cent in addition to piece work rates, and to weekly workers, time and one-half. Workers habitually tardy or absent to be subject to discipline. Any

work heretofore done on piece work basis to be so done during life of this agreement.

In each separate shop, an agreement to be reached between the representatives of the union and the employer, as to standards of production with respect to each separate operation. A memorandum thereof to be made and signed and to become part of this contract. Any difference about standards to be submitted to the impartial chairman. If production falls below standard through fault of the workers, compensation to be re-adjusted accordingly, any difference arising also to be submitted to the impartial chairman.

The principle of the Preferential Union Shop to prevail in all shops of ten members of the Association. Employer needing additional workers to apply to union. If union is unable to furnish help, employer may secure it where he can. In lay-offs, those not members of Amalgamated Clothing Workers in good standing to be first laid off, except where this would impair efficiency of the shop.

All work to be given to inside shops; if these cannot ensure prompt delivery, extra work may be placed in outside shops, preference being given to those employing members of the Amalgamated Clothing Workers.

During slack seasons work to be divided as far as practicable equally amongst all workers.

Power of discharge and discipline to remain with the employers and their agents, but an employee may appeal to the board.

Changes in wages and working conditions may be made only at the beginning of each season. Board to have power to determine whether conditions have changed so as to warrant changes in general wage levels or in hours of work; if changes are thought to be warranted, negotiations to begin between parties to agreement.

Building and Construction

WINNIPEG, MAN.—MILLMEN'S SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND WINNIPEG DISTRICT COUNCIL OF CARPENTERS, FOR MILLMEN'S SECTION, No. 171. Agreement to be in effect from May 1, 1921, to April 30, 1922.

Hours of labour, eight per day, four on Saturday optional with the individual mill and employees thereof to reduce hours during winter.

Overtime, time and one-half. Sundays and holidays, and after midnight, double time. No work on Labour Day.

Wages, per hour—mill employees under this agreement divided into three groups: benchmen, stickmen, shapermen, trimmen, millwrights, woodturners, all-round machine men, who must be competent mechanics in their several lines, and stickermen and shapermen, capable of tempering and making their own knives, all 85 cents; benchmen and all less capable than above, 75 cents; competent machine men, 72 cents; all other except teamsters and labourers, 54 cents, pending future discussion of an apprenticeship system.

In event of disputes or grievances, a committee of employees to meet the employer or employers. Failing settlement matter to be referred to the District Council and Builders' Exchange. No stoppage of work pending settlement.

No discrimination against any employee for membership in the union.

HAMILTON, ONT.—LOCAL CONTRACTORS AND HAMILTON CARPENTERS' DISTRICT COUNCIL. Verbal agreement in effect from July 23, 1921.

Hours of Labour: Eight per day, five on Saturdays. Overtime: time and one-half, Sundays and holidays (emergency only), double time. No work on Labour Day.

Minimum wage: Per hour, 75 cents. One apprentice to every four journeymen, the average for the year to deter-

mine the number; the apprentice to attach himself to the union. Wages of apprentice to be mutually agreeable to employer and union.

HAMILTON, ONT.—LOCAL CONTRACTORS AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS. Agreement in effect from May 1, 1920, to April 30, 1922.

Hours of labour: Nine per day, five on Saturdays. Overtime, to midnight, time and one-half; thereafter and Sundays and holidays, double time.

All engineers to be union members.

Minimum straight time wage: Per month, steam shovel and dredgemen: engineers, \$250; cranemen, \$190; firemen, \$155. Per hour—cableway, sewer diggers, locomotive crane, orange peel, clam shell buckets, 90 cents; two drum hoist, pile drivers, 80 cents; ship hoists, concrete mixers, pumps, syphons and pulsometers, compressors, street rollers locomotives, steam and electric, narrow gauge dinkies, 75 cents; firemen and watchmen, 70 cents.

OTTAWA BRANCH OF ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, AND BRICKLAYERS' UNION No. 7 AND STONEMASONS' UNION No. 14. Agreement in effect from July 13, 1921, to April 30, 1922.

Hours of labour, eight per day, four on Saturdays.

Overtime until 10 p.m. Saturday afternoons and holidays, double time.

Minimum wage, per hour, 90 cents.

An industrial Council to be established of five members from each party with an independent chairman to be chosen by both parties to adjust disputes.

Parties agree to adopt and enforce the National Apprentice System as adopted at the Joint Conference of the Building and Construction Industries in Ottawa on May 3, 1921. (To be revised by both parties to this agreement.)

PORT ARTHUR, ONT.—MASTER PLUMBERS AND STEAMFITTERS OF FORT WILLIAM AND PORT ARTHUR, AND PLUMBERS' AND STEAMFITTERS' UNION No. 378. Agreement to be in effect from June 1, 1921, to April 30, 1922.

Minimum wage: Per hour—90 cents.

Not more than one apprentice to each shop and one additional apprentice to every four men, up to twenty; apprentices to serve five years.

Each steamfitter to be allowed not more than one helper; minimum wage of steamfitters' helpers, 58½ cents per hour.

Hours of labour: Eight per day, four on Saturdays. Overtime, time and one-half up to midnight; thereafter and Sundays and holidays, double time.

Only union men to be employed.

In event of any trouble arising, an arbitration committee to be appointed of two masters and two journeymen, and one other agreed upon by them.

No member of No. 378 to take work on his own account.

Public Utilities

MONTREAL, QUE.—MONTREAL LIGHT, HEAT AND POWER CONSOLIDATED, AND THEIR EMPLOYEES, MEMBERS OF LOCAL UNION No. 16,571. Agreement to be in effect from June 21, 1921, to June 21, 1922.

GAS DISTRIBUTION.

(a) Mains and Services.

Hours: Eight per day, forty-eight hours per week. Overtime, time and one-half. Sundays and holidays, double time, this not to apply to regular seven day workers.

Wages: Per hour—fitters, 1st class, 60 1-8 cents; 2nd class, 43¾ cents; governor man, 60 1-8 cents; caulkers, 46½ cents; syphon men, 43¾ cents; helpers, 41 cents; labourers, 41 cents.

Lay-offs to be governed by seniority and efficiency. Grievances to be pre-

sented to proper officer of the Company. If representation by a committee is desired, foreman to be notified and an officer of the Company will meet committee representing aggrieved parties.

Agreement to apply only to employees on permanent operations.

(b) Fitting Department:

General working conditions as above, for mains and services.

Wages: Per hour—fitters, 60 1-8 cents; helpers, 41 cents; gas and electric meter installers, 43¾ cents. Per month—trouble men, \$110; clerks, \$100.

One week's holidays with pay to monthly employees of not less than six months' service, in lieu of overtime.

Men who have served an apprenticeship of four years as improvers or helpers to be deemed competent as fitters.

HOCHELAGA AND LASALLE GAS WORKS.

Hours: Eight per day. Hours beyond regular working day to be paid for at overtime rates. Overtime not to apply to long days when night and day gangs shift, nor to unloading coal.

Continuous operation of the gas works being necessary, overtime for Sundays and holidays will not be paid the seven day or shift workers. Overtime for non-shift workers, time and one-half. Holidays, double time. Seniority and efficiency to govern in lay-offs.

Grievance provisions as in Gas Distribution Department above.

Wages, Hochelaga Gas Works: coal gang: per month, no overtime—coal foremen, \$164; per hour—cable way operators, 60 1-8 cents; sub-foremen, 49¼ cents; coal trippers operator, 52½ cents; transporter operator, 60 1-8 cents; labourers, 35 cents. Yard gang: per hour, coke loader operator, 43¾ cents, (or an agreed piece rate); labourers, 35 cents; watchmen, per full night, \$3.28. Water gas men: per hour, gas

makers, 58½ cents; labourers, coaling, 41 cents. Retort house men, per hour; machine men, 61¼ cents; pipe jumpers, 60 1-8 cents; stokers, poker men, mains and scurfers, 58½ cents; mains and scurfers' helpers, 35 cents, sulphate men, 45 cents; sulphate men's helpers, 41 cents. Maintenance: per hour, pipe fitters 54¾—60 1-8 cents; pipe fitters' helper, 41 cents; machinists, 70 cents, machinists' apprentices and helpers, 27 3-8—43¾ cents; handy men, 41—49¾ cents; boiler men, 54¾ cents. Engineers, exhausters and boosters, 49¼ cents; blacksmiths, 60 1-8 cents to 70 cents; blacksmiths' helpers, 49¼ cents; pump men, 41 cents; electricians, first class, 70 cents; electricians and construction and maintenance men, 54¾—65 5-8 cents.

Wages, LaSalle Gas works: Per hour—engineers and booster men, 49¼ cents; bricklayers, 60 1-8 cents; retort men, 58½ cents; coke bridge operator, cable splicer, 54¾ cents; clam operator, 54¾—60 1-8 cents; bridgemen, dumpers cable men, seal men, screen men, 54¾ cents; sulphate men, 45 cents; coke loader operator, 43¾ cents (or an agreed piece rate); machinists (journeymen), 70 cents; machinists' apprentices and helpers, 27 3-8 cents to 43¾ cents; handy men, 41—49¼ cents; blacksmiths 60 1-8—70 cents; blacksmiths' helpers, 49¼ cents; pipefitters, 54¾—60 1-8 cents; pipefitters' helpers, 41 cents; labourers, 35 cents; electricians, 1st class, 70 cents; electricians, construction and maintenance, 54¾—65 5-8 cents; watchmen, per full night, \$33.28.

Services

MOOSE JAW, SASK.—CERTAIN BARBER FIRMS, AND JOURNEYMEN BARBERS' UNION No. 589. Agreement to be in effect from September 23, 1921, to September 23, 1922.

Minimum wage: Per week—\$20, with 65 per cent of takings over and above \$33 per week.

Hours of work: 8 a.m. to 6.30 p.m. for five days; until 10 p.m. on Saturdays.

Certain holidays to be granted. Em-

ployee to work until 9 o'clock the day preceding a holiday.

Employee commencing work on a broken week or losing time in a week to be paid 60 per cent of all money taken by him.

Only union men to be employed.

Civic Employees

CALGARY, ALTA.—CITY COMMISSIONERS AND THE CALGARY FEDERATION OF CIVIC EMPLOYEES AND AFFILIATED UNIONS. Agreements in effect for the year 1921.

Preamble: City Commissioners at all times to receive a grievance committee. City not to discriminate against any of its employees because of their connection with trade organizations.

44-hours per week; daily-men with two years' continuous service, one week's holidays with pay.

Men working 48 hours per week and all monthly employees who have been in service one year, two weeks' holidays with pay.

Promotion to be made from the staff provided applicants have the necessary qualifications, seniority and efficiency being considered.

Overtime: first four hours, time and one-half; thereafter and Sundays and holidays, double time.

Minimum wage: For able-bodied men in service of city, \$110 per month; for able-bodied general labourers (except street cleaners), 60 cents per hour; for street cleaners and men not able-bodied, 50 cents per hour.

Agreement with International Brotherhood of Blacksmiths' Helpers.—Working hours, overtime and holidays as in preamble. Minimum wages as in force in 1920.

Agreement with Calgary City Hall Staff Association.—Salaries as 1920 schedule. Promotions, holidays, overtime as in preamble.

Agreement with Calgary Civic Employees' Association No. 37.—Wages:

Per hour—general labourers, 60 cents; skilled labourers, 65 cents; hydrant foremen, 68 cents. Monthly men to be paid as in 1920.

Forty-eight hours to constitute a week's work when two or more shifts are in operation. One month's work to consist of twenty-five and one-half days for running or revolving shifts.

Overtime, holidays, etc., as in preamble.

Ashmen to be promoted to assistant firemen. Engineer in charge may use services of an engine room apprentice as an assistant fireman.

Agreement with International Brotherhood of Electrical Workers No. 348.—Hours of labour, eight per day; four on Saturdays. Shift work, eight hours per shift—16 hours rest between shifts—any time worked then to be overtime.

Apprentices to serve four years—during last year to do same work as journeymen if required.

One apprentice to every three journeymen; in case of inside wiremen and operators, one to one.

Holidays as in preamble.

Wage scale to remain in force as in 1920, except where specifically adjusted.

Agreement With Calgary Fire Fighters Federal Union No. 19.—Wages to be as in force in 1920.

Men to be supplied with summer uniforms to be delivered not later than April 1, and winter uniforms not later than October 1.

Each member to have 14 days' vacation with pay after 12 months' service.

Promotion as in preamble.

In event of the City not inaugurating a general civic pension scheme, a pension fund plan to be submitted for consideration of commissioners and council.

Agreement with City Hospital Employees' Association No. 8.—Salaries and wages as in force in 1920, except where specifically adjusted.

Two weeks' holidays with pay for all employees with continuous service for one year or more. A day to be substituted in case of work on a legal holiday.

Orderlies to receive sufficient white uniforms.

Hours: Per week—engineers, orderlies, second cook, kitchen help and maids, 48; plumber, painter, carpenter, floor polishers, washers, ironers, laundry help, 44 hours. Others, 47 hours.

Agreement with International Association of Machinists.—Working hours, overtime, holidays, grievances as in preamble.

Minimum wage as in 1920.

Agreement with International Brotherhood of Plumbers and Steamfitters.—Hours per first five days of week, eight; Saturday, four.

Overtime, first four hours, time and one-half; thereafter, also Sundays and holidays, double time.

Minimum wage as in 1920.

Agreement with Police Protective Association.—Wage schedule to be same as 1920.

In addition to uniforms supplied, patrol men to receive two pairs of boots each year, or an allowance not to exceed \$20, also overcoats, mitts and electric torches. Other than patrol men to be allowed suitable clothing or granted an allowance in lieu of same.

Hours of work for uniform department and patrol drivers, eight per day, six days per week.

Seniority and efficiency to govern in all promotions.

Not less than fourteen days' annual leave with pay.

Any member leaving the service of his own accord not to be appointed to any rank higher than that of first class constable in event of rejoining.

Agreement with International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers.

All help to be employed by month. Rate of pay to be same as in 1920. Overtime, promotions and holidays as in preamble.

No reduction of pay for inclement weather.

Agreement between Calgary Street Railway Department and Federation of Civic Employees.—A minimum of four lectures a year to be guaranteed to employees, \$1 per lecture being paid for attendance at same.

One hour extra pay allowed for time worked on Sundays except when called out on seventh day when regular overtime rate will be paid. Five cents per hour extra to motormen training students.

Hours of labour: 48 hours per week; five and one-half for first five hours, thereafter, double time. No more than six hours' overtime for a man each week except during epidemics or during fair week. Spare men guaranteed 150 hours per month.

City to pay full cost of stipulated clothing for all men in service one year, and half cost for men in first year.

No discrimination against union members.

Chief inspector to have right to discipline employees for all misdemeanours.

In serious cases employee to be given a hearing by superintendent. Employee if suspended or discharged to have right to have case investigated by committee of the union, who shall appeal to superintendent; if decision is not satisfactory, further appeal may be made to commissioners, and grievance committee may then appeal for a conciliation board.

Wages: Per hour—conductors and motormen, first six months, 57 cents; second six months, 62 cents; thereafter, 67½ cents. Motor-conductors, 5 cents per hour above this scale. This scale to apply to new men coming into the service after January 1, 1920; previous employees to receive maximum wage.

Wages: Per month—trackmen, repairmen, etc.: Shop foreman, \$190; day foreman, \$185; night foreman, \$180, these three to work six days a week, eight hours per day, including legal holidays; overtime only when specially called out by the superintendent.

Per hour: Foremen carpenters, blacksmiths, 95 cents; carpenters, 90 cents; armature winders, 87½ cents; motor and controller men, 82½ to 87½ cents; air brake and wheel lathe operators, 87½ cents; foremen painters, 85 cents; painters, 75 cents; cleaners, washers and yardmen, 60 cents; motor mechanics and cash box repairers, 72½ cents; brake and truckmen, 65 to 72½ cents.

RECENT CHANGES IN WAGES AND HOURS OF LABOUR IN CANADA

THE following is a statement by industrial groups of the more important changes in wages reported to the Department of Labour during the month of September.

IRON AND STEEL PRODUCTS. — *Peterborough, Ont.* One firm cut wages of employees 10 per cent on October 1. The men (one-third of the normal staff) are working only 4 days per week. *Kings-ton, Ont.* Wages per hour of employees in a shipbuilding plant were reduced as follows and hours per week increased

from 50 to 55 on August 3. Mechanics (18) from 60 cents to 55 cents; holders-on, from 46½ cents to 45 cents; heaters and reamers from 38 cents to 35 cents; drillers from 42 cents to 37½ cents; helpers (60), from 36 to 32½ cents. *Guelph, Ont.* Wages of 44 stove plate moulders were reduced 8 per cent on September 19. Wages of 28 iron moulders were reduced 20 to 22 per cent on September 12. *London, Ont.* Wages per hour of workers on tin and enamel wares were reduced as follows on July 21:

Sheet metal and tin workers, 205 men, 29 women, from 50 to 45 cents; enamelers, 90 men, 17 women, from 45 to 40 cents; 28 men on machines, from 75 to 65 cents; 13 galvanizers and retinners, from 45 to 40 cents; labourers (105), from 40 to 35 cents. Wages per hour of foundry workers of the same firm were reduced as follows: Moulders (132), from 67½ to 65 cents; mounters (145), from 55 to 50 cents; sheet metal workers (27), from 55 to 50 cents; labourers (95), from 42 to 38 cents. Wages of moulders on piece work were cut 15 per cent, and wages of other piece workers cut 10 per cent. Hours per week remain 50. *Sault Ste. Marie, Ont.* Wages of steel workers (staff reduced September 1) working half time, reduced 10 per cent September 1. *Calgary, Alta.* Union wages per hour of machinists were reduced October 7 as follows, hours remaining 44: Machinists, from 85 to 77 cents; specialists from 70 to 63 cents; rough drillers and helpers from 60 cents to 54 cents; apprentices, from 30-70 cents to 27-63 cents.

PULP AND PAPER MANUFACTURING. — *Merritton, Ont.* Wages per hour of employees in a pulp mill were reduced on August 16 as follows: Machinists, millwrights, from 82 to 70 cents; pipefitters, from 85 to 70 cents; oilers, from 62 to 60 cents; chipper men, from 62 to 52 cents; cooks in digester and acid plants, and acid makers, from 80 to 70 cents; cooks' helpers, from 62 to 52 cents; yard labourers, from 60 to 48 cents; screen men, from 60 to 50 cents; liquor men, from 80 to 70 cents; calender runners, from 75 to 70 cents; labourers on tour work, from 60 to 50 cents; labourers on day work, from 60 to 48 cents; finishers, from 70 to 60 cents; experienced counters, from 40 to 34 cents; learners, first

3 months, and sealers, from 35 to 29 cents; engineers, from 80 to 70 cents.

MISCELLANEOUS MANUFACTURING.—*Peterborough, Ont.* Wages of 1,000 piece workers on electrical supplies manufacturing reduced 10 per cent on September 16.

MINING.—*Anyox, B.C.* Wages per day in one firm were reduced as follows on September 1, the reduction being effective after being voted on by secret ballot: Copper melting motormen, from \$4.75 to \$3.85; feeders and furnace men, from \$5.25 to \$4.25; crane chasers, from \$4.50 to \$3.70; labourers, from \$4.00 to \$3.40. Coke ovens: Heaters, from \$5 to \$4; pushermen, from \$5.25 to \$4.25; doormen, from \$4.50 to \$3.70; reverse men, from \$3.75 to \$3.15; chutemen, from \$4.00 to \$3.40. Copper mining: Miners (53), from \$5 to \$4; muckers (46), from \$4.50 to \$3.70; carpenters, blacksmiths and mechanics, from \$5.75 to \$4.75.

BUILDING TRADES. — *Kitchener, Ont.* Wages per hour of bricklayers were reduced on July 15 from \$1.00 (8 hours) to 90 cents (9 hours). *Port Arthur, Ont.* Union wages of plumbers were reduced by agreement in June, 1921, from \$1.00 to 90 cents, hours remaining 44. *Ottawa, Ont.* Union wages per hour of bricklayers, which were \$1.00 in 1920, were settled at 90 cents on July 13, hours remaining 44.

TRANSPORTATION. — *Sherbrooke, Que.* Wages per hour of trackmen (10) were reduced on August 16 from 30 cents to 25 cents.

AMUSEMENTS. — *Winnipeg, Man.* Wages of theatrical stage employees were reduced on September 3, \$5.00 per week.

PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1921

AS in the past two months, there was little change in the level of prices, either retail or wholesale, the index number of wholesale prices showing a slight decrease for September and the retail prices food budget showing a slight increase, both due chiefly to seasonal changes in prices of farm products. In wholesale prices grain, live stock, meats, butter and cheese were down, while in retail prices potatoes, eggs and butter were up.

In retail prices, the average cost of a list of 29 staple foods in sixty cities was \$11.82 as compared with \$11.44 in August, \$15.95 in September, 1920, \$14.33 in September, 1919, \$13.31 in September, 1918, \$11.15 in September, 1917, \$8.96 in September, 1916, \$7.74 in September, 1915, and \$7.83 in September, 1914. The chief increase for the month was in potatoes, the prices for the new crop being high as compared with old stock at the beginning of August, but about the same as for the new crop a year ago. There were also increases in lard, eggs, butter, cheese, and in sugar. Bituminous coal and wood averaged slightly lower but anthracite coal was slightly higher.

The Departmental index number of wholesale prices was slightly down, standing at 232.7 for September as compared with 236.4 for August, 326.6 for September, 1920, 301.5 for September, 1919, 285.3 for September, 1918, 246.1 for September, 1917, 183.4 for September, 1916, 150.3 for September, 1915, and 141.3 for September, 1914. The decrease for the month was chiefly in livestock and meats, but there were slight decreases in grains and fodder. In dairy products butter and cheese were lower but eggs and milk were upward. In Fruits and Vegetables, Miscellaneous Foods, Hides, Leathers, Boots, and Shoes, Building Materials, and Chemicals there were slight decreases. Raw cotton, lead, and silver, and raw furs were higher.

The table of retail prices and rentals shows the prices at the beginning of September of over one hundred staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figures being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts exclusively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class

is of houses in fair condition less desirably located, but still fairly central without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, those being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the

items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

Retail Prices

In meats, prices for beef were lower throughout the Dominion in all lines, sirloin steak averaging $1\frac{1}{2}$ c. lower, round steak 2c., rib roast $1\frac{1}{2}$ c., shoulder roast 1c., and stewing beef $\frac{3}{4}$ c. lower. Veal was lower in nearly all the provinces. Mutton averaged nearly 2c. per pound lower. In pork there were slight increases in some of the cities. Prices of fish showed little change. Canned salmon averaged lower. Lard continued to recover from the low prices in July. In eggs there were general advances averaging 3c. per dozen. Milk was lower at New Glasgow, Sherbrooke and Brandon but advanced at Ottawa and Hull. In butter there was a general advance averaging 2c. per pound. Cheese averaged $\frac{1}{2}$ c. per pound higher. Bread was lower at Niagara Falls and St. Catharines. Flour was slightly lower. Rolled oats averaged slightly higher, but

*December only.

cornmeal, barley, rice, and tapioca were slightly lower. Canned tomatoes, peas, and corn averaged slightly higher. Potatoes had reached very high levels in August, not only for new stock but also for such old stock as was still on the market. At the first of September new potatoes were still very high though lower in most cities than for new potatoes at the first of August. New potatoes quoted by the peck were up. Dried and canned fruits showed little change. Corn syrup and honey were slightly lower. Sugar averaged nearly $\frac{1}{2}$ c. per pound higher. Cream of tartar and laundry starch were slightly lower. Anthracite coal was lower at Quebec, Sherbrooke, St. John's, St. Catharines, London, Chatham, and Winnipeg but advanced at Thetford Mines, Sault Ste. Marie, and Port Arthur. Hard coal was down from \$18.35 to \$18.00 per ton at Vancouver but was unchanged at \$16.00 at Nelson. Bituminous coal was lower at Moncton, Woodstock, Chatham, Owen Sound and Winnipeg, but advanced at Belleville, Brantford, Calgary and Nelson. Wood declined in a number of the cities. Coal oil averaged $\frac{1}{2}$ c. per gallon lower. Rent was higher at St. Catharines and Owen Sound, but declined at Medicine Hat.

Wholesale Prices

GRAINS AND FODDER.—Wheat, No. 1 Northern, was down to \$1.38 per bushel at the end of the month at Winnipeg as compared with \$1.72 at the end of August. Ontario winter wheat, however, was slightly higher at \$1.25-\$1.30 per bushel at Toronto. Barley at Winnipeg was down from 76c. to 64c. per bushel and oats from 48c. to 46c. Corn had fallen to 67c. at the end of August and remained around that level during September. Flax seed had fallen to \$1.75 in August, rose to \$2.06 in September, but fell later to \$2.00. Hay at Montreal was down from \$35.00 per ton to \$29.00. Bran and shorts were firmer at \$28-\$30 and \$30-\$32 respectively per ton at Toronto.

ANIMALS AND MEATS.—The best cattle at Winnipeg rose from \$5.50 to \$5.75 but fell to \$5.25 per hundred pound. Butcher

cattle were steady at Toronto. Beef, hind-quarters, fell from 15c.-18c. per pound to 12c.-17c. and forequarters from 7c.-9c. to 5c.-9c. Plate beef in barrels fell from \$23 to \$22. Hogs advanced from \$10.25 to \$10.75 but fell to \$9.00 per hundred. Dressed hogs fell from 20c. per pound to 17c. Breakfast bacon fell from 35c per pound to 34c and ham from 37c. to 36c. Mess pork in barrels fell from \$34 to \$31. Lard was 1c. lower at 18c. Sheep fell from \$4.00-\$4.50 per hundred pounds to \$3.50-\$4.00. Mutton fell from 10c.-13c. per pound to 9c.-12c. Dressed lamb was down from 22c. pound to 18c.

DAIRY PRODUCTS.—Finest creamery butter at Montreal fell from 39c. per pound to 36 $\frac{1}{2}$ c. Cheese was down from 21c. to 16c. Eggs were up to 52c. per dozen at Montreal.

FISH.—On the Atlantic coast dried cod were 6c. per pound, haddock 4c per pound, and salt mackerel 6c. per pound, being unchanged since June, the decrease in August reported in the September issue of the LABOUR GAZETTE being in error. Lake trout fell from 16c.-17c. to 14c.-15c. per pound at Toronto. Canned salmon, sockeye, were firmer at \$5.35-\$5.60 per dozen at Toronto.

FRUITS AND VEGETABLES.—Peaches fell to 75c.-\$1.50 per basket at the beginning of September but rose later to \$1.50-\$2.00. Pears fell to 40c.-65c. per basket but rose to 65c.-\$1.25. Grapes were up to 60c. per basket but declined to 45c.-50c. Bananas were 1c. lower at 8c. per pound. Valencia oranges were slightly lower at \$5.-\$7 per box. Prunes were higher at 11 $\frac{3}{4}$ c. per pound. Potatoes fell to \$2.00-\$2.25 per bag at Toronto in small lots and to \$1.50-\$1.75 at Montreal in car lots. Tomatoes were down to 15c.-30c. per basket at Toronto at the beginning of the month but rose later to 30c.-50c. Onions were lower at \$2.00-\$2.75 per hundred. Canned corn fell from \$1.50 to \$1.40 per dozen. Canned peas and canned tomatoes were firmer at \$1.75 per dozen.

MISCELLANEOUS FOODS.—Flours, spring wheat, first patents, fell \$1.00 per barrel

(*) Preliminary figures.

(†) Five commodities off the market, fruits, vegetables, etc.,

One line or spelter was dropped in 1915.

(a) Number of commodities varies from month to month.

(†) Revised.

to \$9.70 at Toronto. Glucose was slightly lower and molasses advanced 3c. per gallon. Salt declined between 5 per cent and 10 per cent.

TEXTILES.—Worsted yarn was down from 95c. per pound to 82½c. and a line of beaver cloth from \$4.50 per yard to \$4.10. Raw cotton had fallen to 11.85c. per pound by June but advanced slightly in July and August and in September rose to 19.70c. at New York owing to prospect for a light crop. Several lines of cotton goods were lower. Raw silk, both Japan and Italian, were slightly higher. Jute and hessians also recovered slightly. Hemp rope was down 52c. per pound to 50c.

HIDES, LEATHER, BOOTS AND SHOES.—Upper leather was down from 40c per pound to 38c. Boots were falling slightly.

METALS AND IMPLEMENTS.—Iron bar, black sheets, galvanized sheets, steel billets, and steel bar were lower. Brass and quicksilver were lower. Bar silver had fallen to 58c. per ounce in June but recovered slightly in July and August

and reached 64½c. per ounce in September. Axes and crow bars eased off.

FUEL AND LIGHTING.—Furnace coke advanced at Connellsville from \$3.00 to \$3.25 per ton.

BUILDING MATERIALS.—Spruce deals at St. John fell from \$25 per M to \$23. Lath at Ottawa fell from \$7.50 per M to \$6.50. Wire nails and wire fencing were lower. White lead, turpentine, and prepared paints, shellac and putty declined. Linseed oil was firmer.

HOUSE FURNISHINGS.—Sad-irons fell from \$2.18 to \$2.12.

DRUGS AND CHEMICALS.—Bleaching powder declined from 4¼c. to 4c. per pound, copperas from \$1.80 per hundred to \$1.75, quinine from \$1.40 per ounce to \$1.15.

MISCELLANEOUS.—In raw furs, mink, muskrat, and skunk were firmer. Malt declined from \$1.25 to \$1.20 per bushel. Pulp, ground wood, fell to \$20-\$25 per ton and sulphite pulp to \$80 per ton. Crude rubber at New York advanced from 16½c. to 17c. per pound. Laundry starch declined from 8c. per pound to 7¾c.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE accompanying tables and the following notes give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources. The authorities for the wholesale price index numbers are named in each case.

United Kingdom

The official index number for retail prices of foods for September 1 shows an increase of 125 per cent since July, 1914, while the cost of living figure shows an increase of 120 per cent in the same period. The increase in rents was between 50 and 55 per cent, in clothing

about 170 per cent, in fuel and light, between 140 and 145 per cent and in certain items of miscellaneous expenditure about 110 per cent. The index number for food showed a decline of 1 point from the preceding month, while that for all items fell 2 points. During the month there was a fall in the price of potatoes and a further decline in the price of meat. There were also reductions in the average price of flour, bread and fish. On the other hand, there were upward movements in the average prices of eggs, butter, cheese and margarine. Reductions of clothing during the month of August produced a fall of 10 points in this group. The reductions were distributed over all the items of clothing included in the statistics.

a Average for year. b Quarter beginning in specified month. c 230 commodities, 1890-1909: 272, 1910-1914: 271, 1915-1921.

Germany

The official index number of wholesale prices of the Federal Government, which had been falling steadily from December, 1920, to May, 1921, showed a rise in June for the first time. The figure for May was 1306 and for June 1365. These figures are percentages of the average price for 1913, which forms the base. The rise is partly attributed to the fall in the value of the mark on the foreign exchanges, which particularly affected articles of importation, such as lard, cocoa, coffee, pepper, cotton, etc. But commodities produced in Germany shared in the rise, examples being sugar, veal, pork, shellfish, codfish, hops, cow-hides and leather. An advance in the price of potatoes was due to seasonal causes. Even amongst imported articles, however, tea, jute, tin and petroleum showed a decline in price in June, owing to a fall in their value on the world markets. The general rise in wholesale prices continued in July, when the index number rose to 1425.

These two months also saw an advance in retail prices, the cost of living index number for the country rising from 880 in May to 896 in June and reaching 963 in July, thus surpassing the highest point hitherto reached (944 in January, 1921). Food, rent, heating and lighting are included in the calculation of this number, and it will be seen, therefore, that the cost of these, expressed in marks, is over nine times the pre-war figure. The index number for food alone for July was about $12\frac{3}{4}$ times the pre-war figure. As a result of the removal of control over butter the price of this commodity on the open market in June was about 10 marks per kilogram lower than previously sold in illicit trading, but the upward trend of prices in July brought butter up again almost to its former figure on the illicit market.

Italy

The index number of cost of living compiled by the Turin municipal bureau of labour statistics, taking prices in the first semester of 1914 as 100, recorded

413.9 for the month of August, 1921. This was an increase of about 9 points from the preceding month. The advances took place in the cost of foods and of fuel and light.

Czecho-Slovakia

The *International Labour Review* for September, 1921, contains index numbers of retail prices in Czecho-Slovakia which indicate that in May, 1921, the prices of foodstuffs and fuel were more than 14 times, and those of clothing, etc., more than 21 times the pre-war level.

Hungary

The same issue of the *Review* contains an index number of cost of living for Hungary which shows a general average for May 31, 1921, over 36 times the pre-war figure. This was in spite of the fact that a general reduction had been taking place during the early months of the year.

India

The cost of living index number of the Labour Office at Bombay for July, 1921, was 77 per cent above the level of July, 1914, and showed a rise of 4 points from the preceding month. The food index number showed a rise of 5 points, the increase over July, 1914, advancing from 69 per cent to 74 per cent.

Japan

The *Daily Intelligence*, published by the International Labour Office, contains the following extract from the Tokyo Nichi Nichi, July 20, 1921.

The closing down of factories and the diminution of business due to trade depression generally was followed by a decrease in wages and an increase in unemployment. Workers as well as employers are now feeling the effects of a reduction in income. Several commodities, e. g., rice, showed a decrease in price to a certain degree, but prices of the greater majority of commodities still remain high, and in some cases there is a distinct difference between the wholesale price and the retail price.

The Department of Agriculture and Commerce have thought it necessary to take some effective measures to reduce the price of daily necessities and for that purpose intends to encourage the universal establishment of con-

sumers' co-operative societies, improve the system of distribution of commodities, and amend the Law on trade associations of vendors of staple articles, especially the trade association of retailers.

It is generally acknowledged that the high retail prices in Japan are to a great extent due to the fundamental defects existing in the method of buying and selling, and investigations are being made with regard to the entire system of transacting business of selling. On the other hand it was found necessary to improve the method of buying on the part of consumers. The Japanese public is lacking in the knowledge of the best way to buy daily necessities, and the Department has appointed four women professors of different schools, to act as promoters for setting up a society for studying household economy, chiefly in order to distribute knowledge regarding daily necessities and to make improvements in the buying of them. The society will prepare lectures and lecture courses, and hold exhibitions and issue magazines for propagating this object, and as a first attempt an exhibition of daily necessities will be held in the City of Tokyo some time during the autumn.

United States

Dun's index number of wholesale prices for October 1 was \$161.839. At August 1 this number registered an increase over July 1, but the two succeeding months have shown slight recessions. Net changes in this index number of late have been trifling. The present level is 34 per cent above the pre-war figure, and shows a decline of 39.3 per cent from the high point of May 1, 1920.

Bradstreet's index number of wholesale prices for October 1 was \$11.1879, an advance of less than 1 per cent over the September figure. Of the groups of commodities represented in this index, number, fruits, textiles, metals, coal and coke, naval stores, building materials and miscellaneous products, advanced in price, while breadstuffs, live stock, provisions hides and leather, oil, and chemicals and drugs went lower.

The National Industrial Conference Board has an index number of cost of living, based chiefly on data from non-government sources, although the food figures are those of the United States Bureau of Labour Statistics for the 15th of the preceding month. The index

number for all items weighted for September, 1921, was 165, prices for July, 1914, the base period, being taken as 100. The September figures for the different groups were as follows: food, 155; shelter, 169; clothing, 157; fuel and light, 179; sundries, 183. The decline from the highest point in each group is as follows: food, about 29 per cent, from July and August, 1920; shelter, about 1 per cent from June, 1921; clothing, about 45 per cent, from April, 1920; fuel and light, 10½ per cent, from January, 1921; sundries, about 5 per cent, from January, 1921. The highest point for all items was in July, 1920, and the figure for September, 1921, marks a drop of about 20 per cent from this point. The lowest figure of this year was for June, when the number stood at 162. Since that month there has been no regularity of movement.

The index number of wholesale prices calculated by the Bureau of Labour Statistics of the United States was 152 for September, thus showing no variation from the figure of the preceding month. Owing largely to the sharp advance in raw cotton, farm products increased over three per cent in average price, while articles in the cloths and clothing group increased 4½ per cent. Chemicals and drugs also showed a small increase. Metals and metal products showed no change in the general price level. In all other groups prices in September averaged lower than in August. The decrease was most pronounced in the case of foodstuffs, prices of which were 4 per cent below those of the previous month.

The Bureau's index number of retail food prices for September was 153 as compared with 155 for August. Of the forty-three articles on which monthly prices are secured, thirty decreased in price, eleven showed an increase, and the prices of two remained unchanged. The price of cabbage decreased 11 per cent; potatoes 5 per cent; leg of lamb 4 per cent; raisins 4 per cent. Onions advanced 8 per cent; strictly fresh eggs 6 per cent; and canned tomatoes 4 per cent. All other increases and decreases were smaller than those named.

RECENT LEGAL DECISIONS AFFECTING LABOUR

THE two legal decisions summarized below both deal with Workmen's Compensation, one in Alberta and the other in the province of Quebec.

Permanently injured employee entitled to compensation in Alberta even if accident due to his gross carelessness

An employee of the Grand Trunk Pacific Railway Company was permanently injured when coupling cars. He brought an action against the company under the Workmen's Compensation Act of Alberta. The evidence showed that the injury was caused by the employee using his foot to adjust a drawbar when one car was moving toward another with which it was to be coupled. The company claimed that in doing this the employee was violating one of its rules, and therefore the action should be dismissed. The trial judge found in favour of the defendant company and dismissed the application. The plaintiff employee appealed to the Appellate Division of the Supreme Court of Alberta. This court assumed the existence of a rule of the company known to the plaintiff, the violation of which caused the accident, but held that the accident was one which arose out of and in the course of the plaintiff's employment, and as "serious and wilful misconduct" was not a defence under the Alberta statute when permanent injury was sustained, the appeal was allowed and the matter referred back to the District Court Judge for assessment of compensation. The company then

appealed to the Supreme Court of Canada.

It was found by the Supreme Court that the alleged rules which it was contended the plaintiff had violated were not proved to be rules or regulations of the company properly promulgated to its employees, being simply printed on a sheet of paper addressed "To the New Man," and termed "Safety Precautions." Both the plaintiff and a foreman of the company, a witness on its behalf, declared they had had no knowledge of the rule forbidding employees to go between the cars. Therefore it was declared that even if violation of the rules of the company would mean that the respondent's accident had occurred outside of the course of his employment, the rule in question had not been proved to be a duly promulgated one; and even if the employee's action had amounted to gross misconduct this was not a defence under the Alberta Compensation Law when permanent injury ensues.

The appeal of the company was therefore dismissed with costs. (*Alberta—Morreau vs. Grand Trunk Pacific Railway Company.*)

A workman leaving his job to help another cannot recover damages under Quebec law if injured

A workman in a tool and machine factory left his own job in order to help a fellow employee to release a steel bar which had been caught in a wedge when being raised. The bar slipped from its hook and fell on his left foot, fracturing a toe. He brought an action against his employers for \$4,625.50 damages before a jury in the Superior Court of Quebec at Montreal. The plaintiff employee alleged negligence on the part of the employer in having defective hooks. On behalf of the defendant employer it was claimed that

the plaintiff had no right to leave his work to release the bar. No danger was threatened and there were other workmen available to do that work.

In answering the questions submitted to them, the jury found that the plaintiff had suffered damages amounting to \$1,500 but they held that the accident was due entirely to the plaintiff's own fault. Council for the defence moved for a dismissal of the action. The Court granted this motion and the action was dismissed. (*Quebec—Romanos vs. Rapid Tool and Machine Company.*)

THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE GIDEON D. ROBERTSON.
DEPUTY MINISTER—F. A. AGLAND.

Volume 21

NOVEMBER, 1921

Number 11

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

In addition to the regular monthly and quarterly articles and summarized accounts of recent trade union conventions, this issue of the LABOUR GAZETTE contains a number of other articles of general industrial interest. Among such articles may be mentioned those dealing with the re-organization of the railways in Great Britain, the railway labour crisis in the United States, further recommendations of the United States Unemployment Conference, juvenile employment service in various countries, and the work of the Workers' Educational Association in Great Britain.

At the beginning of October the percentage of unemployed among members of trade unions stood at 8.5 as compared with 8.7 at the beginning of September and with 3.3 at the beginning of October, 1920. Much short time continued to be indicated by a large number of the unions making returns. According to reports received from over 5,000 employers, employment was in somewhat greater volume than in the preceding month, although the situation continued to be decidedly less favourable than during October of last year.

The average cost of the weekly family budget of staple foods in 60 cities fell to \$11.48 at the beginning of October as compared with \$11.82 at the beginning of September, \$15.83 in October, 1920,

and \$7.99 in October, 1914. The average cost of a budget of foods, fuel and rent in sixty cities was \$20.01 for October, as compared with \$22.34 for September, \$26.46 for October, 1920, and \$14.47 for October, 1914. The index number of wholesale prices for October fell to 229.2 as compared with 232.7 for September, 317.6 for October, 1920, and 138.7 for October, 1914.

The time loss due to industrial disputes during October was less than during either September, 1921, or October, 1920. No new strikes were reported during the month. Sixteen strikes were carried over from the previous month involving about 2,229 workpeople and resulting in a time loss of about 54,704 working days. None of these strikes were reported as having terminated during the month.

Proceedings under the Industrial Disputes Investigation Act

During the month of October the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the Toronto Suburban Railway Company and certain of its employees, being line-men, operators, wiremen, etc., members of the Canadian Electrical Trades Union, Toronto Branch, and (2) various railways, (namely the Canadian National Railways, Canadian Pacific Railway,

Grand Trunk Railway and the Toronto, Hamilton and Buffalo Railway), members of the Railway Association of Canada, and certain of their employees, being engineers, firemen, conductors, trainmen, yardmen and telegraphers, members of the several trade unions of these classes of workers.

Three applications were received for the establishment of Boards of Conciliation and Investigation, and a Board was established in connection with an application which had been received during the previous month.

A report was also received from the Committee of Conciliation, Mediation and Investigation established to deal with the dispute between the Intercolonial and Prince Edward Island, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees.

Jottings

The Canadian Brotherhood of Stationary Engineers, Firemen and Helpers, will convene at Calgary, Alta., in December.

Two appointments to official positions in Canada, of considerable interest to organized labour, have recently been announced. The federal government has appointed Mr. Calvin Lawrence, of Ottawa, the legislative representative of the Brotherhood of Locomotive Engineers, to the Board of Railway Commissioners; and the Ontario government has appointed Mr. H. J. Halford, vice-president of the Trades and Labour Congress of Canada, to be vice-chairman of the Ontario Workmen's Compensation Board.

It is reported that the special committee appointed by the Ontario government to consider unemployment has received the assurance of organized labour in Ontario that it will accept "reductions in wages in proportion to the reduction which has taken place in the cost of living."

It is announced that the mayors and city commissioners of various cities of

Western Canada will hold a conference at Medicine Hat, Alta., during November, to attempt to secure a uniformity of wages and conditions of employment for civic employees.

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, in the course of an article entitled "Labour Legislation in Dominion of Canada" in the October issue of the American Labour World published in New York, writes as follows with reference to the subject of legislation respecting industrial relations:

Legislation dealing with industrial relations is to be found on the statutes of both the Provinces and the Dominion. The most commonly used legislation of this nature is the Industrial Disputes Act. This legislation met with opposition from the organized workers from its inception, but with amendments clarifying its intent and modifying some of the objectionable features and also with improved administration of this act the calls for its repeal have ceased and to-day the workers would be prepared to accept its extension to industries not at present covered by the act, subject to further amendments eliminating certain penalties clauses which have never been found possible of enforcement.

When addressing the Toronto Board of Trade recently, Mr. R. H. Coats, Dominion Statistician, offered the suggestion that the Dominion Bureau of Statistics might be strengthened by the addition of an honorary advisory council composed of representatives of financial, general business, transportation and labour interests, a leading economist, and others. With respect to the "troublesome questionnaire," he stated that the bureau had of late been very materially assisted by different associations of manufacturers.

The question of the validity of the Oriental Order-in-Council Validation Act of British Columbia, passed at the last session of the legislature, is at present before the Supreme Court of Canada for decision. The orders-in-council confirmed by this Act prohibit the employment of Japanese and Chinese in any contracts, leases and concessions

entered into, issued, or made by the Government. Until the constitutionality of the Act is determined, the Government of British Columbia is restrained by injunction from prohibiting the employment of Japanese and Chinese by holders of timber licenses in the province.

The British Columbia Government has voted \$3,000,000 during the past two years for the aid of private industries, to be administered by the Department of Industries. Of this amount, \$1,072,853 has been loaned; assistance has been rendered 65 enterprises covering the entire industrial field of the province, and an aggregate of 1,500 men have been given employment. Three of the loans have been repaid, and three others in which small amounts have been expended, have failed to make satisfactory returns.

The Ontario School Law Amendment Act, which came into force on July 1, 1921, provides that a school board or board of education may appoint a qualified officer or officers to collect and distribute information regarding available occupations and to offer such counsel to the pupils as will enable them to plan intelligently for their vocational and educational advancement.

The executive council of the American Federation of Labour recently issued an appeal to all the State legislatures asking those bodies to adopt or amend their workmen's compensation laws to correspond with the Ohio State Workmen's Compensation Act, which law, in the opinion of the executive, may be regarded as a model compensation act. All State federations and local labour bodies are also being asked to co-operate in the matter.

The Premier of New South Wales, in reply to a recent deputation urging the adoption of measures for the alleviation of the prevailing distress, stated that the Government was giving serious consideration to the institution of some system of insurance against unemployment.

According to a recent decision of the British House of Commons co-operative stores in Great Britain cannot be classed with corporations, and hence their surplus profits will not be subject to the corporation profits tax. It was held that profits of the co-operative societies were not profits in the ordinary sense — that profits of the private traders are made out of the consumers for the benefit of themselves, while the profits of the co-operatives are the savings of the consumers made by trading with themselves.

In order to cope with unemployment conditions in Germany, the Reichstag, on June 2, 1921, decided to grant a special single payment to persons who have been out of work for more than twenty-six weeks. According to regulations issued for Berlin, any unemployed person of either sex, between 16 and 21 years of age, will receive 300 marks; persons over 21 years, 400 marks, if living in lodgings, and 500 marks if in their own home; married persons 600 marks, plus 50 marks for each child up to a maximum of 800 marks.

The post ballot for the election of the new General Council of the British Trades Union Congress, which was necessary owing to a mistake in the taking of the first ballot at the recent convention at Cardiff (see LABOUR GAZETTE, October, 1921, page 1276) resulted in the election of the following officers: *Mining and Quarrying*—R. Smillie, H. Murnin, R. T. Jones; *Railways* (no contest)—J. Bromley, J. H. Thomas, A. G. Walkden; *Transport*—H. Gosling, Ben Tillet; *Shipbuilding* (no contest)—J. Hill; *Engineering, etc.*—A. B. Swales, A. Findlay, J. Rowan; *Iron and Steel*—A. Pugh, W. Kean; *Building, etc.*—G. Hicks, A. A. Purcell; *Printing and Paper*—H. Skinner; *Cotton* (no contest)—H. Boothman, J. W. Ogden; *Other Textiles*—B. Turner; *Clothing*—A. Conley; *Leather* (no contest)—E. L. Poulton; *Distributive Trades*—*Glass, pottery, chemicals, etc.*—John Turner; *Agriculture* (no contest)—R. B. Walker;

Public Employees—J. W. Bowen; *Non-Manual* — J. B. Williams; *General Workers* (no contest)—J. Beard, J. N. Bell, J. Davenport, W. Thorne; *Women*—Margaret Bondfield, Julia Varley.

League of Nations Society of Canada The first public meeting of the League of Nations Society of Canada (the inauguration of which took place on May 31 last, and was noted in the July issue of the LABOUR GAZETTE) was held in Toronto, on October 8. The meeting was well attended and was presided over by Sir Robert Borden, other speakers being Premier E. C. Drury, Hon. N.W. Rowell, K. C., Hon. Mr. Justice Riddell, Mr. H. A. Halford, and Professor MacIver. In speaking of the purposes of the meeting, Sir Robert Borden referred to the chief object for which the League of Nations was formed—the preservation of world peace. He pointed out that the peace of the world could be maintained only by the public opinion of the world. It was therefore to be the great work of the League of Nations Society of Canada to educate the public opinion of Canada to this end. Premier Drury spoke of Canada's unique opportunity for creating a good understanding between Great Britain and the United States. In the friendly unity of the Anglo-Saxon race, he said, there was a great force for the benefit of mankind—a force which, if wisely used, would make for the peace of the whole world. The Hon. Mr. Rowell dwelt on the achievements of the League of Nations. If the Washington Conference on Disarmament proved a success, it would be largely due to what the League of Nations had already done to pave the way. The speaker referred to the large amount of humanitarian work which the League was accomplishing in such matters as the suppression of the opium traffic, etc. In the industrial sphere it was endeavouring to better conditions for men, women and children throughout the world, and to deal with the grave problem of the relationship between Capital and Labour. The objects of the League of Nations Society

of Canada were enumerated as follows: To promote international peace; to furnish information about the work of the League; to study international problems, and Canada's relation thereto as a part of the British Commonwealth; to foster mutual understanding and goodwill among the Anglo-Saxon races; and to promote the establishment of local branches of the League throughout Canada.

A resolution was adopted for the formation of a Toronto branch of the Society. The headquarters of the Society are at 106 McKinnon Building, Toronto, and Mr. H. D. Robertson is the general secretary. Any resident of Canada may become a member by paying a fee of one dollar.

Workmen's compensation arrangements between Ontario and Quebec

In the August issue of the LABOUR GAZETTE, on page 978, reference was made to the unsatisfactory operation of the Workmen's Compensation laws in the case of employees residing in the province of Quebec but working in Ontario. As a result of conferences between Mr. Louis Guyon, Deputy Minister of Labour of Quebec, Hon. Walter Rollo, Minister of Labour of Ontario, and Mr. Sam Price, chairman of the Ontario Workmen's Compensation Board, an arrangement has since been made whereby the province of Quebec will no longer be discriminated against in the application of the Workmen's Compensation Act. Hereafter all victims of industrial accidents in Ontario, resulting in permanent disability, either total or partial, will be treated alike whether they reside in Ontario or Quebec. The Ontario Government further recognizes the principle of paying the bills of the Quebec doctors and hospitals in all cases of industrial accidents occurring in Ontario to workmen residing in Quebec, providing they are in compliance with the Board's regulations. If such a workman is killed by an accident his widow will not be entitled to a lump sum as under the

Quebec law, but she will receive a monthly allowance of \$40 for herself and \$10 for each child under sixteen years of age.

Mothers' Allowances in Ontario

Statistics supplied by the Mothers' Allowances Commission of Ontario in advance of the publication of its first annual report show that there have been 2,585 beneficiaries under the Act with 7,878 children. Of the beneficiaries 2,310 were widows, 60 were wives whose husbands were in an asylum, the husbands of 165 were otherwise permanently incapacitated, many of them being tuberculous; 43 wives had been deserted by their husbands for five years or more, and 7 were foster mothers. In view of the passing of the Adolescent School Attendance Act, requiring all children, unless specifically exempted, to attend school until they are sixteen years old, an amendment to the Mothers' Allowances Act was passed at the last session applying the Act to children up to 16 years of age instead of 14. This amendment has added largely to the number of children benefiting under the Act.

Course in ceramics at Saskatchewan University

Under an agreement with the Saskatchewan Bureau of Labour and Industries, the University of Saskatchewan has included a course in ceramics in the chemistry and physics department. This course has been placed in charge of Mr. W. G. Worcester, a ceramics engineer with practical experience in field work and in the designing and construction of plants for the manufacture of clay products. The object of this step, which was taken on the initiative of the Bureau of Labour and Industries, is to render available to commercial enterprise some of the valuable and extensive clay products in the province by creating a body of scientifically trained men who would be capable of developing the industry.

According to a statement of the Provincial Treasurer, the Honourable Charles A. Dunning, during 1920, brick and tile buildings to the value of \$8,379,774 were erected in Saskatchewan, but only \$300,000 worth of the brick and tile was manufactured locally. He stated that such articles as jam pots, milk jugs, bean jars, and other lines of crockery were now being made of Saskatchewan clay and were finding a ready market in Eastern Canada. The raw clay, however, is shipped out of the province for manufacture. "With such facts as these," said Mr. Dunning, "we feel the department would fail in its duty were we not to devote some special effort toward the assistance of those clay plants already in existence, as well as the development on a broader scale of such a valuable resource."

Legislation sought by Labour in Saskatchewan

At Regina, on October 19, a delegation of four representatives of the Saskatchewan Executive of the Trades and Labour Congress of Canada laid before Premier Martin and other members of the Provincial government a programme of labour legislation consisting of the following proposals, to which early consideration was promised by the premier:

(1) Amendments to the Workmen's Compensation Act, providing for a state insurance administered by a board; compensation to be awarded on the following basis:

(a) On the death of a workman, funeral expenses to be allowed to the amount of \$150.

(b) Widow or invalided husband to be allowed a monthly payment of \$45 and \$10 additional for each child; the total not to exceed \$75 a month.

(c) Upon a workman suffering temporary or permanent total disability he is to be allowed 100 per cent of his wages for the first 90 days and 75 per cent thereafter.

(d) Upon a workman suffering temporary or permanent partial disability, he is to be allowed an amount equalling 75 per cent of the difference in his earning power.

(e) Medical aid to be allowed and full expenses to be taken from the accident fund.

(2) Legislation embodying the decision of the international labour body, which includes provision for an eight-hour day for workmen, protection of women before and after childbirth, prevention of the employment of women during the night, and prevention of the employment of children in industry under 16 years of age.

(3) An amendment to the Election Act, providing that all employers shall cause to be posted up in their place of business, not less than five days previous to an election, in a conspicuous position, a notice to the effect that on the date set for the election all employees shall have two hours, apart from the usual lunch hour, for the purpose of voting without deduction of pay.

(4) An act providing for the examining and licensing of electrical contractors and journey-men electricians.

(5) Legislation to take care of unemployed and prevent where possible unemployment.

(6) Legislation providing for the use of the proportional representation system of voting and ballot counting, with group constituencies in provincial elections.

(7) The abolition of the election deposit.

(8) Labour representation on government boards.

Furniture Guild in Great Britain *The Daily Herald*, London, reports that a furniture craft guild has been organized at Manchester, England, on similar lines to those of the Building Trades Guild established last year. The only charges, it is stated, will be for full maintenance of the workers, cost of materials and administration. In this way it is hoped that the public will be saved a very considerable proportion of the present cost. In order to provide funds a million penny stamp fund has been launched. The new guild is intended to become a national concern. Its economic aim is stated as being "to bring about such a change in the spirit and organization of the industry that the end of the wages system can be secured and self-government established."

Activities of a labour bank

An article on "Labour Banks" in various countries in the October issue of the LABOUR GAZETTE contained a short account of the Brotherhood of Locomotive Engineers' Co-operative

Bank, of Cleveland, Ohio. This bank was the subject of an address by Mr. W. B. Prenter, its vice-president and cashier who is also general secretary and treasurer of the Brotherhood of Locomotive Engineers, before the Seventh Canadian Grand Union Meeting of the Brotherhood of Locomotive Firemen and Enginemen at St. Thomas, Ont., in August last. Mr. Prenter explained that the bank had made arrangements with the Canadian Bank of Commerce whereby Canadian depositors may deposit money in the Brotherhood's bank and that such deposits are all invested in Canadian securities, the bank having at that time \$250,000 in Dominion, provincial and Canadian municipal bonds in the vaults of its bank at Toronto. Of the nine million dollars cash deposits, less than two millions, he stated, had been deposited by members of the Brotherhood and only \$10,000 by Canadians, so that thus far "the bank has only scratched the surface." Mr. Prenter outlined the future activities and proposed developments of the bank, stating that their order is endeavouring to get the United States banking laws amended so that branches of the bank may be opened all over the country, and should they fail in that they propose to establish state banks in various states and also banks in Canada. Rural credits, he said, are being extended by the bank to the organized farmers in Ohio, North Dakota and other states, and funds for home building and other purposes are being advanced to workers.

International conference on Mine Rescue work

As a direct result, it is unofficially stated, of representations made by the Honourable William Sloan, Minister of Mines

for British Columbia, an international conference was recently held at St. Louis, Missouri, under the auspices of the United States Bureau of Mines to discuss the standardization of mine rescue apparatus and methods of training in the use of such apparatus. Delegates were present from Canada, United States, Great Britain and other

European countries. The following resolution was adopted: "Whereas—it is the sense of this conference that it is highly important to advance the art of mine rescue work by a certain degree of standardization of mine rescue methods and the use of apparatus and appliances so that improvements may be effected along lines which will guide and assist those engaged or concerned in mine rescue work, therefore be it resolved that a committee be designated by the chairman at his convenience, that will at some later date or dates as may seem expedient, make a report or reports under the auspices of the Bureau of Mines, which will be made public, and that such committee will continue its work until such reports have been made or until there shall be a future international mine rescue conference called or held under the auspices of the United States Bureau of Mines."

At the International First Aid and Mine Rescue Meet held at St. Louis, Mo., under the auspices of the United States Bureau of Mines, the first-aid team of the Canadian Western Fuel Corporation of Nanaimo, B. C., tied with two other teams for fourth place with a score of 96.6 per cent, the winning team making a score of 98.2 per cent. A drawback with the team from Nanaimo, it is stated, was that they had been trained by the St. John's Ambulance standards and they found some difficulty in adopting the Bureau of Mines standards.

Technical training for the unemployed Last summer the compositors' Union of Edinburgh, Scotland, requested the governors of the George Heriot's Trust who control the Heriot-Watt College, a Technical school of that city, to open a day class in monotype work for unemployed compositors. This was done, and the class was placed in charge of a competent

instructor chosen from the ranks of the unemployed. In a letter to the *London Times*, Mr. A. P. Laurie, principal of the school, states that the class has been a success and there will probably be requests for further classes this winter. The writer suggests the extension of this experiment throughout the country wherever technical colleges exist. In support of this proposal he says: "It is obvious that we have to choose between doles, which are a dead loss to the state and demoralize the recipient, or devise schemes by which the unemployed are giving back something to the state, in return for relief, which is of permanent value. This may be, for instance, the reclaiming of waste lands or the making of necessary roads, but if he is employing his time in improving his skill as a craftsman, he is also adding to the permanent wealth of the nation, and giving something back for what he receives, while the extra cost of opening such classes, in addition to the money which will be spent in supporting the unemployed, is a trifle... It is only necessary, on the one hand, to make the joining of such a class, where a suitable class exists, one of the conditions of relief, and to extend the power of paying out-of-pocket expenses for teaching ex-soldiers to the case of the certified unemployed, to have the whole machinery running within two or three weeks."

A further proposal is being put forward in Great Britain to the effect that where suitable arrangements cannot be made with technical schools, the plant and equipment of idle factories be utilized for class demonstration purposes.

Minimum wage laws of United States The United States Department of Labour has just issued as Bulletin No. 285 an account of the minimum wage legislation of the United States, including its operation in

the different jurisdictions. In the United States, minimum wage laws have been passed in twelve States, the District of Columbia and Porto Rico, but they are applicable only to women and minors. The economic effect of these laws is said to be a general wage increase in favour of persons affected by them, though without any apparent tendency for the minimum fixed by legal process to become the maximum, or even the standard wage, though the laws have largely done away with wide variations in wages previously paid for identical services. It is also said that the employment of younger children has been restricted as a result of these laws. A survey by the Bureau of Labour Statistics and the reports of the various administrative commissions indicate a very general acceptance of the laws by employers, many of them having expressed their approval as to both principles and results. The first minimum wage law enacted in the United States was in Massachusetts in 1912.

Japanese employers recommend formation of labour unions

In June last the prefectural government of Tokyo requested various organizations of employers to give suggestions as to the best way of securing the numbers of those actually unemployed, and the most effective measures for the relief of unemployment. The *Kojo Konwakai*, an organization of more than 500 of the principal factory employers in the prefecture of Tokyo sent a reply in which they stated: "The difficulty of calculating the real figure of unemployed is greater in Japan, due to the fact that there exist generally no well organized labour unions, and in order to ascertain the exact number of those out of work, as well as to cope with the situation, it is advisable to encourage the universal formation of labour unions, besides co-ordination in the matter of employment exchanges and employers' organizations in the staple articles."

National insurance scheme for aviators

A bill for the creation of a national insurance society for aviators, pilots, and flight mechanics has recently been introduced in the Chamber of Deputies, France. This proposed society will be under the control of the Minister of Public Works or by proxy of the Under-Secretary of State for Aviation. All pilots on reserve of the army and navy air services, aviators, civilian pilots, and flight mechanics over 18 years of age and of French nationality, will be compulsorily insurable under the system. The funds of the society will be derived from deductions from wages, deductions from "flight bonuses" granted by the state to pilots on the reserve during periods of military service; an employer's contribution; and a tax on the cost of aerial transport paid by travellers from France or her colonies. Members of the society will be entitled, in case of injuries or illness directly due to their occupation, to an annuity in case of permanent incapacity and to a daily benefit in case of temporary incapacity. Widows of insured persons will be entitled to a pension.

Profit-sharing in the United Kingdom in 1920

The British Ministry of Labour published in 1919 a report on Profit-sharing and Labour Co-partnership in the United Kingdom (Cmd. 544; price 1s. net.) giving an account of the progress of the profit-sharing and labour co-partnership systems in that country to date. The following information respecting the working of such schemes in the United Kingdom during 1920 has since been given in the September, 1921, issue of the British *Labour Gazette*.

It is stated that 49 schemes of profit-sharing or co-partnership were known to have started in the year 1919, and 40 in 1920, and these are by far the largest annual totals hitherto recorded. Of the 49 started in 1919, 5 have since been abandoned. Since the close of 1920, as

is usual in times of bad trade, the number of such schemes started has fallen very considerably, only three new schemes having been reported up to June 30, 1921. Returns received show that on June 30, 1921, 205 firms, with an aggregate of 300,195 workpeople in their constant employment, were practising systems of profit-sharing or labour co-partnership. Of these 205 firms, 6 were reported to have two schemes each, so that the total number of schemes of profit-sharing in operation at the above date was 211. In addition, 2 firms have schemes which are at present in abeyance, while 19 other firms are known to have practised profit-sharing within recent years, but no information is available to show whether these schemes are still in operation.

Of the 205 firms practising profit-sharing at June 30, 1921, 33 (employing 37,089 workpeople) were gas companies; 29 (employing 84,832 workpeople) were in the engineering, shipbuilding and metal trades; 29 (employing 28,142 workpeople) were merchants, warehousemen, retail traders, etc., and 25 (employing 47,236 workpeople) were in the textile trades. The remainder were distributed among a great variety of different trades. The above figures, however, tend to overstate the numbers of workpeople who are effectively employed under profit-sharing conditions, since in a number of schemes profit-sharing is restricted to certain classes of employees, or is enjoyed only by those employees who choose to deposit savings with the employing firm, or to take up shares in the undertaking.

As regards the 151 profit-sharing schemes for which statistics have been compiled, 109,580 employees participated, or were entitled to participate, in bonuses in 1920. Of these, however, 29,207 were employed under 32 schemes which failed to pay a bonus. The bonuses paid represented an aggregate addition

to earnings of over one million pounds, or £918s. for each employee participating; the average ratio of bonus to earnings being 6.3 per cent. These figures represent a very considerable increase when compared with those for 1919, in which year the results of 116 schemes yielded an average amount of £4.19s. for each employee participating, and an average addition to earnings of 4.9 per cent. It should be noted that these figures relate to the bonuses paid or credited in 1920; and that, in the great majority of cases, the bonuses so paid were based on the profits either of the year 1919 or of a financial year ending at or before June 30, 1920, and are not, therefore, seriously affected by the depression in trade which began in the latter half of 1920.

Of the 32 schemes which failed to pay a bonus in 1920, 18 were gas companies' schemes; this industry also accounted for 6 of the 13 schemes which paid a bonus of less than 2 per cent on earnings. Under the schemes in force in gas companies the bonus is generally regulated by a sliding scale, and varies inversely with the price of gas.

It is interesting to note that in the coal mining industry, under the terms of settlement of the recent industrial dispute, it is provided that, subject to the payment of certain minimum rates, wages in any district shall consist of (a) the standard wages for the district, plus (b) a percentage on basic rates which is to be periodically adjusted in accordance with the proceeds of the industry in such district during a previous period. The sum to be applied in payment of wages above the standard wages is a fixed percentage of the surplus of the proceeds of the industry, after deducting (1) costs of production, including standard wages, and (2) "standard profits," equivalent to 17 per cent of the cost of standard wages.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

I.—The Labour Market, Strikes, Prices

The Labour Market

THE curve of employment based on returns from employers remained practically stationary during October; a slight downward trend was evidenced during the first part of the month, but gains in the latter part counterbalanced it and caused the curve to maintain almost the same position as in September. Decided dullness continued to be registered in comparison with the corresponding period in 1920. Trade unions reported almost the same situation at the beginning of October as in the preceding month, only a nominal gain in employment having occurred. A large volume of business was again transacted by the offices of the Employment Service during September, the number of applicants registering, placements effected and vacancies notified by employers all showing important increases. The number of vacancies was especially noteworthy, reflecting delayed harvest demands in Saskatchewan.

Weekly reports from employers to the Dominion Headquarters of the Employment Service of Canada

EMPLOYERS' for the period September 11 to October 8

REPORTS. showed a net increase in

the volume of employment; a slight decrease in activity during the second part of the period was more than counterbalanced by considerably larger gains in September. Ontario and Quebec reported steady increases in employment; in the Prairie Provinces there were slight fluctuations but the movement on the whole was favourable. In the Maritime Provinces and British Columbia, on the other hand, there were shrinkages in employment. The most important features of the period under review were the gains in the volume of employment afforded in the logging and textile groups.

Offsetting this expansion to some extent, were pronounced losses in sawmills and fruit and vegetable canneries.

These declines, as well as the increase in logging, were seasonal in character. The transportation group, rubber, leather, iron and steel, and coal mining all afforded increased employment. Pulp and paper factories, summer hotels, retail trade and building construction continued to report curtailment in operations. In practically all groups employment was considerably below the level of the corresponding period in 1920. A review of employment conditions for the period July 17 to October 8, together with a chart showing the curve of employment from January, 1920, to the beginning of October of this year, appears elsewhere in this issue of the LABOUR GAZETTE.

The percentage of unemployment as reported by trade unions at the beginning of October remained practically the

TRADE UNION REPORTS. same as that registered in September; 8.5 per cent of the members

were out of work in the former month as compared with 8.7 in the latter. In September of last year only 3.3 per cent of the members reported were unemployed. (Unemployment as used here has reference to involuntary idleness due to economic causes; persons occupied in work other than their own trades, or who are idle because of sickness, or as direct result of strikes or lockouts are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to those unions reporting.) All provinces except Nova Scotia, Quebec and Manitoba registered

less unemployment; the change in every province, however, was slight.

The returns for the beginning of October covered 183,373 trade unionists, of whom 15,530 persons were idle. Considerable improvement was noted in the building and construction group, in which there was about six per cent more employment. The manufacturing division, on the other hand, registered less activity; the situation reported by ladies' garment workers, largely in Montreal, was not as favourable and accounted for a substantial share of this dullness. The metal trades were somewhat busier; as were also workers in the printing and publishing group. Leather workers registered approximately five per cent more slackness. In the transportation group also the situation was scarcely as favourable, a temporary shutdown in locomotive shops adversely affecting employment in the steam railway group. Mine workers both in the coal fields of Nova Scotia and in the asbestos mines in Quebec were less fully employed. The percentage of unemployment for logging and lumber workers remained practically stationary, while there was an increase in the number of fishermen out of work.

A review in some detail, including tabular statements, of the unemployment situation during the quarter ended September 30 as indicated by trade unions is printed elsewhere in this issue.

Further increases were reported in the volume of business transacted by the offices of the Employment Service of Canada during the four-week period ended September 24, 1921, as compared

with the preceding period and the corresponding period of last year. The volume of employment offered during the period increased considerably, and during the week ended September 3 reached the highest point attained since the establishment of the Employment Service. Applications and placements also showed increases during the period,

there being about thirty per cent more applications registered than during last year. This increased activity was due to the additional demands for harvest labour in the Western provinces, unfavourable weather conditions having somewhat handicapped the harvesting during the month of August.

The offices reported that during the period under review 36,932 placements, of which 34,166 were of men and 2,766 of women, were effected. Placements reported during the preceding four-week period totalled 34,412, while during the corresponding period of 1920, they numbered 35,405. In addition 6,473 placements were made in casual employment (one week or less) as compared with 5,030 during the previous period and 6,639 during the same period of last year. Applications registered at the offices during the period numbered 53,038, of which 44,908 were of men and 8,130 of women. Applications reported during the preceding period were 52,445; during the corresponding period of 1920, they numbered 40,712. Employers notified the Service during the period of 56,114 vacancies (47,254 for men and 8,860 for women); vacancies registered during the previous period numbered 49,970 and during the same period of 1920 there were 55,327 positions offered.

The quarterly report on the work of the offices appears elsewhere in this issue.

Employment in the building trades, as indicated by the value of the building permits issued during September showed a slight expansion as compared with the preceding month. The total value of the permits issued in 56 cities was \$9,988,147 as compared with \$9,654,095 in August and with \$9,174,181 in September of last year. Nova Scotia, Quebec, Ontario, Alberta and British Columbia registered gains over the preceding month; New Brunswick, Manitoba and Saskatchewan, on the other hand, reported decreases.

As compared with September of last year all provinces except New Brunswick and Manitoba reported expansion in the volume of building contemplated. As to the larger cities, Montreal registered increases as compared with both August, 1921, and September, 1920. Toronto and Winnipeg, on the other hand, showed contractions in both cases. At Vancouver the value of the building permits issued during the month under review exceeded that issued in August, but was slightly under the total for the corresponding month in 1920. Of the smaller centres, Shawinigan Falls, Westmount, Chatham, Hamilton, Ottawa, St. Catharines, Windsor, Saskatoon, Calgary, Edmonton and South Vancouver recorded pronounced gains in both comparisons. A statement showing the value of the building permits issued by the 56 largest cities during the quarter ended September 30 is given elsewhere in this issue.

According to the *Canadian Building Review* issued by MacLean's Building Reports, Limited, the value of contracts awarded during September totalled \$19,565,700 as compared with \$20,820,100 in September, 1920. Of the former amount \$896,900 was awarded in the Maritime Provinces; \$14,945,600 in Quebec and Ontario and \$3,723,200 in the Western Provinces. Of this total, \$8,116,800 was to be expended on residences, \$8,056,500 in business buildings, \$886,400 on industrial establishments and \$2,506,000 in engineering contracts.

Strikes

The loss of time on account of industrial disputes during October was less than during either September, 1921, or October, 1920. No new strikes were reported as having commenced during the month. There were carried over from the previous month 16 strikes, involving about 2,229 workpeople and resulting in a time loss of 54,704 working days, as compared with 22

strikes, 3,535 workpeople and 69,100 working days in September, 1921; and 21 strikes, 6,168 workpeople and 72,893 working days in October, 1920. None of the strikes were reported terminated, thus leaving 16 strikes, involving about 2,229 workpeople, on record at the end of the month.

Prices

During October wholesale prices continued the decline which began in May, 1920, but which has been less steep since June, 1921. In retail prices there was a fall during the month from the prices of August and September, in which months the decline that started in July, 1920, was temporarily reversed, due to a seasonal rise in potatoes.

The Departmental index number of wholesale prices was down to 229.2 for October as compared with 232.7 for September, 317.6 for October, 1920, and 138.7 for October, 1914. The chief changes for the month were declines in prices of grain, livestock and meats, and in miscellaneous foods and groceries, but there were also declines in fish, leather, house furnishings, drugs and chemicals, and in sundries. There were slight advances in textiles, gasoline, and coal oil, and seasonal advances in eggs and milk.

In retail prices the average cost of a list of twenty-nine staple foods in sixty cities averaged \$11.48 at the beginning of October as compared with \$11.82 at the beginning of September, \$15.83 in October, 1920, and \$7.99 in October, 1914. The average cost of a budget of foods, fuel, and rent in sixty cities was \$22.01 for October as compared with \$22.34 for September, \$26.46 for October, 1920, and \$14.47 for October, 1914. The chief changes for the month were decreases in potatoes, meats, cheese, flour, and bread, but there were increases in eggs and butter. Anthracite coal and hard wood advanced slightly but soft coal, soft wood and coal oil declined slightly.

II.—Industries and Trades during October, 1921

Logging

LOGGING operations in Quebec remained practically stationary during October as compared with September; a few slight gains were made in some centres, but on the whole there was little indication of seasonal activity. At La Tuque a considerable number of men were employed in logging camps; Three Rivers also registered slightly more employment. Montreal firms dispatched large working forces to the bush. In several other centres — Louiseville, Mungo, River Desert — staffs remained practically as in September. In contrast with the static conditions prevailing in Quebec, the situation in Ontario showed marked improvement. Operations at Blind River, Fort Frances, Pembroke and upper Ottawa points indicated substantial expansion; slighter gains in employment occurred at Haileybury and Nestorville. Increases on a smaller scale were registered in British Columbia; firms at Alert Bay and Headquarters made additions to their staffs. These gains were not as large, however, as the reductions reported in September. Information respecting the month of September, which was not available for insertion in the last issue of the LABOUR GAZETTE, shows that timber of all species scaled in British Columbia in that month totalled 139,010,983 feet, as compared with 188,318,312 feet in August. The quantity of Douglas Fir scaled continued to be nearly 50 per cent of the total.

Mining

Operations in coal mining again showed expansion, more particularly in Alberta, though the Nova Scotia mines also employed more men. At Inverness, Joggins Mines, Stellarton, Westville and Glace Bay additions were made to working forces, though not on a very large scale. On the other hand, at Little Bras

D'Or, Springhill, Sydney Mines and Minto, N.B., staffs were somewhat smaller than in September. In Alberta the mines at Brule, Canmore and Nordergg, showed some expansion; at Blairmore, Drumheller, Edmonton and Taber, however, there were minor declines in employment. In the British Columbia coal fields, operations also showed a tendency to expand. Mines at Cumberland and Nanaimo increased their staffs largely; smaller additions were made at Cassidy and Wellington. Employment in the asbestos and chrome mines in Quebec was at a low level; with few exceptions recovery did not occur from the losses reported in September. Employment at Black Lake, however, was in greater volume than for the last four months. The production of gold at Timmins, Ont., was greater than for many months past; increased employment was noted in silver mining at Cobalt, while gold mining at South Porcupine also made gains. On the other hand, at Schumacher and Copper Cliff decreases in activity occurred in the gold and nickel mines respectively. In British Columbia, less employment on the whole was afforded in the metal mines. At Surf Inlet, Trail, and Anyox the mines registered slightly curtailed operations. At Kimberley, on the other hand, there were minor increases.

Manufacturing Industries

Employment in the food group as a whole, after being at a very high level during the preceding six weeks, showed considerable losses in October, mainly on account of the completion of canning operations. The sugar refinery at Dartmouth, N.S., was partly closed, and employed less than a third of its normal staff; at St. John, N.B., also, there was less activity in the production of sugar. The manufacture of chocolate products at Halifax, N.S.,

and St. Stephens, N.B., showed expansion, the factories at those two centres being busier than during any month of this year. At Wallaceburg, Ont., the sugar refinery showed a fair sized increase in staff. Montreal sugar manufacturers employed substantially fewer people than for several months past. No change in this industry was noted at Vancouver, B.C. Fruit and vegetable canneries in Ontario, of course, afforded considerably less employment than in September as the major part of their operations were concluded in that month. Conditions in confectionery factories showed local fluctuations in that province. Slight gains in one London establishment were offset by minor declines in another; in Toronto, also, there were losses in some plants with counterbalancing gains in other factories. Improvement was noted, on the whole, in this industry in Montreal. Flour milling at Port Colborne and Keewatin, Ont., showed expansion; the mills at Winnipeg, also, were busier. Starch manufacturing at Fort William showed some contraction, a continuation of the movement reported during September. Abattoirs and meat packing plants at Montreal afforded more employment though there were local fluctuations in conditions in different establishments. At Toronto, also, this industry manifested considerable gains. At Winnipeg, Calgary and Edmonton, moreover, increased employment was afforded in the manufacture of meat products.

Employment in the iron and steel industry as a whole showed moderate gains during October. In Nova

IRON AND STEEL PRODUCTS. Scotia the production of iron and steel afforded less employment than for several months past,

especially at Sydney. The shipyard at Halifax reduced its staff considerably during the month; at Three Rivers and Montreal, also, operations in shipbuilding were very much curtailed. One shipyard in Vancouver increased its

staff slightly, while another reported contraction on a larger scale. At Victoria, also, less employment was afforded in shipbuilding. The locomotive shops at Montreal were busier than for several months. Car building in one establishment in Montreal showed large gains, but another factory reported less activity. A slight decrease occurred in the manufacture of marine steam engines and boilers, though the change was of a nominal character. Rolling mills in Montreal recorded local fluctuations; two establishments reported reduced operations, while gains of about the same magnitude occurred in two other plants. Sheet metal production remained at the same level as in September; small hardware registered slight dullness while the manufacture of shoe machinery in the same centre was brisker. At Brantford, Ont., increased employment was afforded in agricultural implement factories; the production of stationary steam engines and boilers remained at the same low level that has been registered since the summer. The manufacture of foundry and machine shop products in Brantford was brisker, largely on account of the partial re-opening of an important establishment. Hardware manufacturing at Brockville continued to employ the same staff as in September; at Hamilton, this industry made gains, while at Ingersoll there was a minor decline in production. The production of automobiles at Chatham and Ford was less than in September; improvement, however, was noted at Oshawa and St. Catharines. Slight gains occurred in the making of heating appliances at Guelph and London. Rolling mills at Hamilton showed fluctuations, but the tendency on the whole was towards a reduction in staff. Employment in structural iron and steel fabrication in the same city was considerably below normal; small hardware factories were somewhat busier. At Kingston, further reductions were made in the staff of the shipyards. Employment in that industry and in the locomotive works in the same city was very substantially below

normal. Shipbuilding at Midland was slightly busier. Practically no change in employment occurred in the railroad shops at North Bay. Foundries and machine shops at Oshawa were not as fully employed. Sheet metal manufacturing also was less active. The Port Arthur shipyards afforded more employment than in September; trade machinery manufacturing at Peterboro recorded some dullness. The fabrication of iron and steel at Winnipeg employed a larger number of persons though the change was not especially pronounced, and there were fluctuations in conditions within the city. Rolling mills at Selkirk were considerably more active, partly as a result of the re-opening of one large establishment.

Further improvement occurred on the whole in the leather industries. At Montreal, a large decline registered in an important factory was partly offset by increases on a smaller scale in several other plants. At Quebec, also, the general tendency in employment was upward, although one plant registered reduced activity. At St. Hyacinthe the production of boots and shoes was less than in September. Expansion was reported in tanneries at Toronto, though the increase in employment was not particularly pronounced. At London, on the other hand, tanneries were less busy while boot and shoe manufacturing afforded more employment. Galt firms employed smaller staffs in footwear factories, but tanneries at Kitchener were more fully engaged. Rubber manufacturing on the whole made important gains during October. At Granby, Quebec, manufacturers of rubber goods continued to enlarge their staffs. The re-opening of an important rubber footwear factory at Montreal very largely offset declines on a smaller scale which occurred in two other plants. Employment in rubber in that city, however, was considerably below normal. At St. Jerome considerable recovery from losses spread over the summer was re-

gistered in rubber footwear factories. Tire manufacturing at Toronto was brisker. A slight decrease in activity was reported in rubber footwear manufacturing in Guelph; the plant at Merriton continued to register low activity. At Kitchener rubber footwear production was slightly less than in September; tire manufacturing also, was not as busy.

Further important losses of a seasonal character were recorded in sawmills during October. At LUMBER PLASTER ROCK, N.B., PRODUCTS. employment was at practically the same level as in September. In Quebec, the contractions appeared to be easing off and in some instances there were small additions to staffs, notably at Breakeyville. At St. Paoôme, Montreal and Quebec, sawmills registered minor declines in activity. Furniture manufacturing at Beauharnois, Coaticook and Cowanville showed further slight gains; match factories at Hull were busier. In Ontario, curtailment of sawmilling operations continued to be reported on a large scale. At Arnprior, Fort Frances, Keewatin and Rockland there was considerably less activity in lumber mills. Furniture manufacturing at Brantford and Stratford was somewhat busier, as was also billiard table manufacturing at Toronto. Slightly less employment was afforded in carriage making at Orillia; vehicle manufacturing at Chatham also showed dullness. In British Columbia improvement was noted in the volume of employment afforded in sawmills, particularly at Fraser Mills, Vancouver and Golden. On the other hand, some contraction was registered at Wardner while at Chemainus no change in conditions occurred.

Employment in pulp and paper factories showed some improvement during October, though there were local fluctuations in conditions. At LIVERPOOL and MURRAY, N.S., PAPER. staffs continued on the September level and were very much below normal. In

New Brunswick there were minor gains at Chatham and St. John, while at Bathurst the re-opening of an important plant caused employment to be brisker than at any time since April of this year. At Hull, Que., the manufacture of pulp and paper was somewhat more active; the same is true also in the same industry at Three Rivers. On the other hand, at Shawinigan Falls, Windsor Mills, Donnacona, Chicoutimi, Chandler, Kenogami, La Tuque and Bagotville less employment was available in the paper mills. Some improvement occurred at Cap Magdeleine and East Angus. Employment in the mills in Ontario was in greater volume in the latter part of October than in September. The re-opening of a large mill at Sault Ste. Marie, which had been partly closed during the preceding month, made for considerably more employment in that district. At Ottawa, Sturgeon Falls, Espanola, Thorold and Smooth Rock Falls the manufacture of pulp and paper was more active; at Iroquois Falls, however, conditions were not as favourable. At Cornwall and Hawkesbury, practically the same situation prevailed as in September.

Expansion continued to be reported by firms manufacturing textile products. Employment in

TEXTILE PRODUCTS.

cotton factories at Yarmouth and knitted goods plants at Truro, N.S., again showed increases. Improvement was noted in cotton manufacturing at Marysville, Milltown and St. John, N.B. At Montreal, men's garment factories were busy, while less employment was afforded in factories making women's clothing. The production of textiles in the same city was not as active as in September. Corset making at Quebec employed a slightly larger number of people. Cotton manufacturing at Sherbrooke was somewhat brisker, while the making of silk products remained on the same level as in the preceding month. At Three Rivers gains were indicated in cotton factories; knitting mills at St. Hyacinthe reported larger staffs than in any

month since January. Men's furnishings factories at St. John's made slight gains, while there was a nominal decline in the employment afforded in the manufacture of thread in the same centre. Textile companies at Magog and Montmorency Falls were not as busy; employment in the same industry at Valleyfield remained stationary, while at Lachute Mills there was a slight gain. In Ontario, as in Quebec, there were local fluctuations with a net increase in employment. Knitting mills at Brantford made very slight additions to staffs; no change occurred in the manufacture of cordage in the same city. At Cornwall, there were increases in the volume of employment available in cotton factories; the knitting mills at Almonte, also, were busier. A minor decline was registered in clothing factories in Galt. At London the production of women's clothing was in somewhat greater volume. General increases occurred in knitting mills, cotton manufacturing, and garment making at Hamilton. At Toronto, employment in the textile industries on the whole was maintained at the September level. Women's clothing factories in some instances were less busy, but in others increases in staffs were noted. Knitted goods and cotton factories in the same centre afforded more employment. At Welland, the cotton mills and cordage factories employed smaller staffs. The former industry at Woodstock made minor gains. At Hespeler, employment in woollen goods was at a higher level in October than for any month since the early spring, although it was not yet normal. The manufacture of woollen fabrics at Peterboro, also, was more active than for many months past. At Edmonton, Alberta, there was a further slight gain in activity in clothing factories.

At St. John, N.B. the employment afforded in the manufacture of brooms and brushes showed no change from the September level. Tobacco factories at Montreal, practically without exception, registered

less activity. Musical instrument companies were slightly busier, as were also firms making paints. Light, heat and power companies in the same city reported a considerable reduction in staffs. In Quebec city, no change in conditions was noted in the production of electric current, nor in tobacco making. Plants producing electric apparatus in Hamilton were slightly less busy; incandescent lamp making also was below normal. Some improvement occurred in employment in tobacco factories at Hamilton. Minor gains were made in electric apparatus manufacturing at Stratford, though only part of the normal number of persons was employed in the factories. The same industry at St. Catharines registered somewhat less activity than in preceding months. Incandescent lamp manufacturing at Toronto was brisker. Musical instrument factories in that city showed local variations; increases made by some establishments were more than counterbalanced by contractions in others. Soap and camera manufacturing at Toronto also afforded somewhat less employment. Minor additions to staffs were made by electric current plants in the same city. A small increase was registered in the manufacture of drugs at Walkerville, while the production of distilled liquors was slightly less. Jewellery manufacturing at Sherbrooke, Que., and in some Montreal factories was busier; other factories in the latter city reported less activity. At Shawinigan Falls, Que., aluminum plants showed some contraction. Nickel refining at Copper Cliff and Port Colborne, Ont., again employed fewer people. At Hamilton, brass manufacturing recorded a reduction. In Winnipeg, further expansion on the whole was reported in the manufacture of electric current, though one company showed another slight decline in staff. At Anyox, B.C., smelting and refining plants again registered low activity.

Construction

The Canadian Pacific, Grand Trunk and Canadian National railways registered a further increase in the volume of employment afforded on railroad construction, including maintenance of way, during the month of October. At the end of the month they employed about 1,100 more persons than at the end of September. The improvement was spread over the month, though it increased in force towards the second half. The Canadian Pacific Railway increased its staff by approximately 1,600 persons; a very much smaller expansion was reported by the Canadian National, while the Grand Trunk registered some contraction. The Prairie provinces absorbed the bulk of the increases, although Ontario and Quebec also registered some gains. (Information with respect to building permits issued and contracts let during September appears in Part I of this article, on pages 1343-4.)

Reports from important contracting firms indicated varying conditions, but on the whole there was a tendency to reduce staffs. At Halifax, N.S., slight increases made by one firm were offset by declines recorded by others. Employment in building and construction at St. John, N.B., was not as active. At Montreal there was expansion on the whole though in some instances firms reported smaller payrolls than in September. Employment in this industry at Hamilton, Ont., was considerably less; firms in London also reduced their staffs though not as materially as in Hamilton. At Fort William and Kingston some improvement occurred. At Windsor, Ont., a large number of men was released from employment in construction work. Varying conditions were reported at Toronto; increases to staffs registered by some firms were offset very largely by contractions recorded by other companies. At Winnipeg, there were important expansions in construction. On the other hand, in British Columbia, firms at Vancouver, Penticton and Wattsburg, were

less busy. Highway construction in Alberta employed a much smaller number of men than during September.

Transportation

The gross earnings of the Canadian National Railways during October were \$11,691,881, as compared with \$10,548,591 in the previous month. Information received respecting the month of September, which was not available for insertion in the last issue of the LABOUR GAZETTE, shows that the gross earnings of the Canadian Pacific Railway in September were \$19,494,761 as compared with \$17,064,266 in August and with \$20,009,287 in the corresponding month of last year. During October, the number of persons employed by the Canadian Pacific, Grand Trunk, and Canadian National Railways in operation, including general offices, trainmen, engine crews, station employees, sleeping, parlour and dining car employees, registered a net gain of approximately 1,100 persons. More than 900 of these were added to the working forces of the Canadian National. The Canadian Pacific Railway increased its staff by 350 workers, while the Grand Trunk registered a slight decline in employment. Manitoba, Saskatchewan, Ontario and Quebec reported the major part of the expansion.

Electric railway transportation during October made important gains, largely on account of improvement and extension work to the civic railway in Toronto. Some increase in employment was reported on the electric railway in Ottawa; in Hamilton, on the other hand, there were contractions. In Montreal, electric railways reported considerable reductions in staffs in comparison with September. At Winnipeg and other Western points there were some gains. Employment in water transportation, as usual, showed considerable fluctuation. On the Great Lakes and the St. Lawrence ports, there was some contraction, but the Maritime ports afforded slightly more employment. In British Columbia there were minor losses.

Trade

Retail trade, as indicated by the number of persons employed by large departmental stores, registered some curtailment as compared with September. This was largely due to reduced activity reported in an important establishment in Toronto. Some stores in the province of Quebec and Manitoba were slightly busier. The situation in wholesale trade showed very slight changes during October.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Proceedings for the month of October, with texts of Boards' Reports, and Report of Committee of Conciliation, Mediation and Investigation, established under Conciliation and Labour Act

DURING the month of October the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the Toronto Suburban Railway Company and certain of its employees, being linemen, operators, wiremen, etc., members of the Canadian Electrical Trades Union, Toronto Branch, and (2) various railways,

(namely the Canadian National Railways, Canadian Pacific Railway, Grand Trunk Railway and the Toronto, Hamilton and Buffalo Railway), members of the Railway Association of Canada, and certain of their employees, being engineers, firemen, conductors, trainmen, yardmen and telegraphers, members of the several trade unions of these classes of workers.

Three applications were received for the establishment of Boards of Conciliation and Investigation, and a Board was established in connection with an application which had been received during the previous month.

A report was also received from the Committee of Conciliation, Mediation and Investigation established to deal with the dispute between the Intercolonial and Prince Edward Island, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees.

Applications Received

During the month of October applications for the establishment of Boards were received as follows:—

(1) From the employees of the British Columbia Electric Railway Company, Limited, Vancouver, Victoria and New Westminster, and certain of its employees, being motormen, conductors, shopmen, etc., members of Local Divisions Nos. 101, 109 and 134, Amalgamated Association of Street and Electric Railway Employees of America. A Board was established composed as follows: Mr. W. C. Ditmars, Vancouver, chairman, appointed on the joint recommendation of the other two members, Messrs. A. G. McCandless and R. P. Pettipiece, Vancouver, nominees of the company and employees respectively.

(2) From the employees of the Canadian Pacific, Canadian National and Grand Trunk Railway Companies, being freight handlers in the Port of Montreal, members of Division No. 178, Canadian Brotherhood of Railway Employees. At the close of the month this dispute was receiving the special attention of a representative of the Department in the locality looking towards a settlement through renewed negotiations.

(3) From the employees of the International Transit Company, Sault Ste. Marie, Ontario, being conductors, motormen, barnmen and interlocker signal-

men, members of Local Division No. 850, Amalgamated Association of Street and Electric Railway Employees of America. A Board was established, Messrs. J. L. O'Flynn and E. V. McMillan, Sault Ste. Marie, being appointed members on the recommendation of the company and employees respectively.

Other Proceedings under the I. D. I. Act

During the month of October a Board was established to deal with a dispute between the Algoma Steel Corporation and certain of its employees, being engineers, firemen, conductors, brakemen, etc., Messrs. J. E. Irving and Jas. Murdock, Sault Ste. Marie, being appointed members on the nomination of the company and employees respectively.

Proceedings under the Conciliation and Labour Act

During the month of October a report was received from the Committee of Conciliation, Mediation and Investigation, established to deal with the dispute between the Intercolonial and Prince Edward Island, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees. The Committee was composed of Messrs. Hamnett P. Hill, chairman, Geo. D. Kelley and Harold Fisher. The report, the text of which appears in the present article, stated that it was impossible to bring the parties concerned into agreement. The dispute being thus unsettled, and the applicants desiring that it should be further dealt with under the provisions of the Act, which permit the erection of the Committee into a Board of Arbitrators, the Minister established a Board of Arbitrators accordingly, Messrs. G. D. Kelley and Harold Fisher being continued as nominees of the employer and workers respectively. Mr. Hill being, however, unable to continue his office as chairman, the Minister appointed Rev. Dr. Byron Stauffer, Toronto, to the chairmanship. At the close of the month the Board of Arbitrators had not reported.

It may be remarked that this is the first case in several years in which the machinery of the Conciliation and Labour Act has been used in place of that of the Industrial Disputes Investigation Act, 1907, and was used in the present dispute at the particular instance of the employer, the workers, however,

not expressing any objection. As indicated in the present report the procedure appears to be in no way more effective than that obtaining under the Industrial Disputes Investigation Act, 1907, while it is obviously slower and involves a greater expenditure of time on the part of the disputants.

Report of Board in dispute between the Toronto Suburban Railway Company and its linemen, operators, wiremen, etc.

A report was received from the Board established to deal with the dispute between the Toronto Suburban Railway Company and certain of its employees, being linemen, operators, wiremen, etc., members of the Canadian Electrical Trades Union, Toronto Branch. The Board was composed of Messrs. U. E. Gillen, chairman, Geo. D. Kelley and H. E. Manning. The report was unanimous and contained recommendations as to settlement of the dispute.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Toronto Suburban Railway Company, employer, and certain of its employees, being linemen, operators, etc., members of the Canadian Electrical Trades Union, Toronto Branch.

To the Hon. G. D. Robertson, LL.D.,
Minister of Labour,
Ottawa.

Sir,

A Board of Conciliation and Investigation was established by you to enquire into the differences between the parties mentioned above. The Board composed of Messrs. U. E. Gillen, Chairman, George D. Kelley, and H. E. Manning, after being duly sworn, met and held public sittings in the Council Chamber of the York County offices in the city of Toronto, August 9th, 10th, and 11th, and November 2nd and 3rd. The delay in

completing our investigation and report is due to the fact that on August 10th we were told that on September 1st the city of Toronto would take over 3½ miles of the Toronto Suburban Railway Company and a number of their employees concerned in this dispute, therefore, by mutual consent of the employer and employees, the meeting was adjourned until September 12th.

On September 9th the employer asked for a further postponement, and on September 10th the employees made a similar request, and it was granted. On October 19th representatives of the company and the men intimated the negotiations between the company and the city had not been concluded and suggested that Board be reconvened and arrangements were promptly made to meet November 2nd.

The employer was represented by Col. G. C. Royce, General Manager, Mr. W. J. Radford, Assistant General Manager, and Mr. C. A. Francis, Accountant. The employees were represented by Mr. J. T. Gunn, Recording Secretary, and Mr. J. Black, Business Agent; the following employees gave evidence, Mr. R. Kirby, Mr. George Alcock and Mr. Orion Carter.

The wages and working conditions now in effect are the result of an award of a Board, their report being dated July 1st, 1920, and that award, we are told, was based on an agreement made in 1919 between the company and its

employees with some regard for the increase in the cost of living between the date of agreement and date of award, but the employees claim the increases in wages were not equal to the increase in cost of living. The Toronto Suburban Railway Company is a part of the Canadian National Railway System, but the increases authorized by the so-called McAdoo Award and supplements thereto were not given to the employees concerned in this dispute.

On June 4th an authorized representative of the men mailed a proposed new schedule to an officer of the company. On June 6th, before the proposed schedule was received, the officer notified certain employees that their wages would be reduced July 1st, the men objected and pointed out that the required 30 days' notice had not been given, and wages were not reduced. The officers of the union received authority from their members to apply for a Board June 10th, and the Board was authorized by the Minister of Labour June 22nd.

On August 10th Col. Royce asked that the wages of operators be reduced 10 per cent and the wages of all other employees represented in the application be reduced 20 per cent. Representatives of the employees objected to the Board considering any reduction in wages, pointing out that their application was for an increase in wages and urged that under the Act we were not authorized to consider a decrease. The Board suggested that it might be well for the company to address the Minister on the subject, and the following are self-explanatory.

Toronto, August 31, 1921.

The Hon. Senator Robertson,
Minister of Labour,
Ottawa.

*Re Toronto Suburban Railway & Electrical
Workers.*

Sir,

When this Board was formed, we were under the impression that not only was it to consider the application from the workers for an increase, but that it was also to deal with the matter of reduction in the existing scale and which had been advised by the company to the men.

As the Board has been adjourned until the 12th September, we respectfully request that you will direct the Board to deal with this, also on a basis of 20 per cent reduction as shown by the reduced cost of living, as given in the LABOUR GAZETTE.

Your obedient servant,

(Sgd.) GEO. C. ROYCE,
Manager.

Ottawa, September 2, 1921

*Re Toronto Suburban Railway and its
linemen, operators, etc.*

Dear Sir,

I am to acknowledge your letter, addressed under date of the 31st ultimo, to the Minister, with reference to matters which, in your view, should come before the Board established in this matter. In reply to your request that the Board may be directed to deal with certain propositions of the company I am to explain that a Board of Conciliation is not subject to the direction of the Minister, but acts under the authority contained in the governing statute, the Industrial Disputes Investigation Act. I am, however, forwarding to the chairman of the Board a copy of your communication, and the Minister is confident that the Board in its contact with the dispute will not overlook the points you have here raised.

Yours truly,

(Sgd) F. A. ACLAND,
Deputy Minister of
Labour and Registrar.

Colonel Geo. C. Royce,
General Manager,
Toronto Suburban Railway Company,
2896 Dundas Street West,
Toronto, Ontario.

The employees in addressing the company and applying for a Board asked that men filling the positions indicated below be paid the rate shown opposite each position.

Foremen.....	\$180.00	per month.
Operators.....	150.00	" "
Linemen.....	.75	" hour.
Linemen helpers.....	.60	" "
Groundmen.....	.60	" "
Bonders.....	.75	" "
Bonders' helpers.....	.60	" "

Armature winders' helpers.....	.60	" "
Wiremen.....	.85	" "
Wiremen helpers.....	.60	" "
Troublemakers.....	.80	" "

The company filed a statement showing name, address, occupation, rate of pay per hour, or per month, hours of service per day and per week of each employee concerned in the application, after which representatives of the men indicated on same sheet the rate then requested which was considerably less than their first request. Shortly after the Board convened, November 2nd, employer and employees conferred with the view of settling their differences. The employees offered to continue present rates of pay and working conditions until March 31st, because employees of the Toronto Street Railway had made such agreement, the offer was rejected by the Toronto Suburban Railway Company. Many exhibits were filed with the Board, we heard all evidence offered, and with due regard to both and other matters pertaining to rules governing working conditions and rates of pay and men employed by other companies and doing similar work, recommend that there be no change in working conditions and that rates of pay be as shown in column below headed "Recommended Rate on and after November 1st, 1921" or until either party gives 30 days' notice of a desire for a change.

Name.	Address	Occupation	Rate of pay July 1st, 1920, to November 1st, 1921.	Hours of service per day.	Hours of service per week.	Recommended rate on and after November 1st, 1921.

Toronto, Nov. 3rd, 1921.

Interim Report of Board in dispute between the various Railways, members of the Railway Association of Canada, and certain of their employees

An interim report was received from the Board established to deal with the dispute between the various railways, (namely the Canadian National Railways, Canadian Pacific Railway, Grand Trunk Railway and the Toronto, Hamilton and Buffalo Railway), members of the Railway Association of Canada, and certain of their employees, being engineers, fire-

men, conductors, trainmen, yardmen and telegraphers, members of the several trades unions of these classes of workers. The Board was composed of the Honourable Mr. Justice F. S. MacLennan, chairman, Messrs. Isaac Pitblado, K.C., and David S. Campbell. The report was accompanied by a tentative agreement signed as between the various railways and their employees concerned. The

agreement required, however, that the Board remain in existence until it was ascertained whether their services would be further required in the event of a revision of the schedule represented in the agreement prior to July 15, 1922.

Interim Report of Board

In the matter of the Industrial-Disputes Investigation Act, 1907, and of differences between various railways, members of the Railway Association of Canada, and certain employees of said railways, being engineers, firemen, conductors, trainmen, yardmen and telegraphers, members of the several trades unions of these classes of workers.

MONTREAL, October 8th, 1921.

Honourable G. D. Robertson,
Minister of Labour,
Ottawa, Ont.

Sir,—

The Board of Conciliation and Investigation established in the matter of a dispute regarding proposed reduction in rates of pay between various Canadian railways and certain of their employees, engineers, firemen, conductors, trainmen, yardmen and telegraphers, composed of Mr. Isaac Pitblado, K.C., of Winnipeg, Manitoba; Mr. David Campbell, Barrister, of Regina, Saskatchewan; and the Honourable Mr. Justice F. S. MacLennan, Chairman, met in the Court House, in the City of Montreal, on September 28th, 1921.

The employees were represented by the following Grand Lodge Officers and Members of Joint Conference Committee representing Engineers, Firemen, Conductors, Trainmen, Yardmen and Telegraphers:—W. G. Chester, General Chairman, Order of Railway Conductors, Canadian Pacific Railway, and Chairman Joint Conference Committee; W. G. Atkinson, General Chairman, Brotherhood of Locomotive Firemen and Enginemen, East Lines, Canadian National Railways, and Secretary, Joint Conference Committee; Ash Kennedy, Assis-

tant Grand Engineer, Brotherhood of Locomotive Engineers; Geo. K. Wark, Vice-President, Brotherhood of Locomotive Firemen and Enginemen; S. N. Berry, Deputy President, Order of Railway Conductors; W. J. Babe, Deputy Vice-President, Brotherhood of Railroad Trainmen; J. M. Mein, Deputy Vice-President, Order of Railroad Telegraphers; R. H. Cobb, General Chairman, Brotherhood of Locomotive Engineers, Canadian Pacific Railway; H. H. Lynch, General Chairman, Brotherhood of Locomotive Firemen and Enginemen, Canadian Pacific Railway; A. McGovern, General Chairman, Brotherhood of Railroad Trainmen, Eastern Lines, Canadian Pacific Railway; R. Urquhart, General Chairman, Brotherhood of Railroad Trainmen, Western Lines, Canadian Pacific Railway; A. Chapman and G. Gilbert, General Chairmen, Order of Railroad Telegraphers, Canadian Pacific Railway; W. G. Dewar, General Chairman, Brotherhood of Locomotive Engineers, Grand Trunk Railway; W. J. Dowell, General Chairman, Brotherhood of Locomotive Firemen and Enginemen, Grand Trunk Railway; T. Todd, General Chairman, Order of Railway Conductors, Grand Trunk Railway; J. Maloney, General Chairman, Brotherhood of Railroad Trainmen, Grand Trunk Railway; J. T. Eddy, General Chairman, Order of Railroad Telegraphers, Grand Trunk Railway; W. Preece, General Chairman, Brotherhood of Locomotive Engineers, Toronto, Hamilton and Buffalo Railway; E. Loose, General Chairman, Brotherhood of Locomotive Firemen and Enginemen, Toronto, Hamilton and Buffalo Railway; E. C. Shephard, General Chairman, Order of Railway Conductors, Toronto, Hamilton and Buffalo Railway; W. J. Goodfellow, General Chairman, Brotherhood of Railroad Trainmen, Toronto, Hamilton and Buffalo Railway; M. C. Burdick, General Chairman, Order of Railroad Telegraphers, Toronto, Hamilton and Buffalo Railway; M. MacKenzie, General Chairman, Brotherhood of Locomotive Engineers, Western Lines, Canadian National Railways; T. Styles, General Chairman, Brotherhood of Lo-

comotive Engineers, Canadian National Railways; G. A. Stone, General Chairman, Brotherhood of Locomotive Engineers, Eastern Lines, Canadian National Railways; E. P. Duke, General Chairman, Brotherhood of Locomotive Firemen and Enginemen, West Lines, Canadian National Railways; T. M. Spooner, General Chairman, Brotherhood of Locomotive Firemen and Enginemen, Canadian National Railways; H. E. Barker, General Chairman, Order of Railway Conductors, West Lines, Canadian National Railways; R. A. MacDonald, General Chairman, Order of Railway Conductors, East Lines, Canadian National Railways; A. J. Ryall, General Chairman, Brotherhood of Railroad Trainmen, West Lines, Canadian National Railways; J. W. R. Hibbits, General Chairman, Brotherhood of Railroad Trainmen, East Lines, Canadian National Railways; W. H. Philips, General Chairman, Order of Railroad Telegraphers, West Lines, Canadian National Railways; J. J. Trainor, General Chairman, Order of Railroad Telegraphers, East Lines, Canadian National Railways.

The Railway Companies were represented by Messrs. A. J. Hills, Assistant to President, Canadian National Railways; George Hodge, Assistant to Vice-President, Canadian Pacific Railway; C. F. Needham, Assistant to General Superintendent, Motive Power, Grand Trunk Railway; H. T. Malcolmson, Superintendent, Toronto, Hamilton and Buffalo Railway, and F. P. Brady, Assistant to Executive, Canadian National Railways.

Prior to the institution of this Board the Railway Companies had taken the position that the situation did not warrant the appointment of a Board under the provisions of the Act, and at the first sitting of the Board took the same position, and stated that they attended before the Board without departing from their original position in that respect and because the Board had formally requested the attendance of representatives of the Railway Companies. The representatives of the Companies

made it clear to the Board that without departing from their original position they would, at the Board's request, assist in every way the Board's investigation.

The first sitting of the Board was held on September 28th, 1921, and the Board has been continuously in session from that date.

Both the representatives of the Employees, and the representatives of the Railway Companies made full representations to the Board in regard to the matters in dispute.

On or about May 13th, 1921, the Railway Companies served notices upon the representatives of the different classes of employees involved in this matter, giving thirty days notice of their desire to revise rules and rates of pay. In June the representatives of the Companies and of the Employees held conferences without being able to arrive at any definite conclusion. At those conferences the Companies presented to the Employees a so-called tentative agreement, and endeavoured to have the employees agree to and sign the same. A sample copy of this tentative agreement is attached to the Application for the appointment of this Board, and is as follows:

It is agreed tentatively, and without prejudice to pending negotiations for revision of Agreement covering rates of pay and rules governing the services of (class specified), that, effective July 1st, 1921, the Company will apply and the Employees will accept the following changes in rates of pay as compared with rates of pay as specified in existing schedules:

	Per mile cents.	Per day dollars.
Passenger service.....	.48	\$0.48
Freight service.....	.64	0.64
		Per day dollars.
Yard service.....		\$0.64

It is also agreed that, promptly upon notice from either the Company or the Employees, to the other, the representatives of both will confer further, and that, except as may be otherwise mutually arranged, any rates and conditions finally agreed upon will be effective as from July 1st, 1921.

Any necessary adjustments will be made accordingly, provided however, that any such adjustments will not operate to bring about any reclaim from employees for any amounts which may have been paid to them pursuant to the terms of this tentative agreement.

FOR THE EMPLOYEES.

FOR THE COMPANY.

.....

The request of the representatives of the Companies to have this tentative agreement agreed to and signed by the Employees was declined by the representatives of the Employees

Subsequently the various Railway Companies decided to withhold a certain portion of the wages of the Employees tentatively, until further negotiations should be had between the Companies and their Employees in regard to rates and conditions. This withholding of pay went into effect with nearly all classes of employees on July 16th, 1921, while with a few of the employees affected the tentative reduction did not take effect until August 1st, 1921.

The withholding by the Companies of a portion of the wages above referred to led to the application by the representatives of the Employees for the appointment of the present Board

After all parties had presented full arguments on the points in dispute, and filed many exhibits in support of their respective contentions, the Board, feeling the importance of the matters involved in the dispute, spent considerable time in endeavouring to bring about a settlement, and, after repeated negotiations and conferences with the parties interested, suggested to the parties that an agreement should be entered into in the form attached hereto.

We are pleased to be able to report that this agreement was finally agreed to by the respective parties at the suggestion of the Board.

This settlement required that the present Board shall remain in existence in the meantime until it is ascertained whether its services are to be again

required pursuant to the terms of the agreement.

All of which is respectively submitted as an interim report.

(Sgd.) F. S. MACLENNAN,
Chairman.

(Sgd.) ISAAC PITBLADO,

(Sgd.) D. CAMPBELL.

AGREEMENT ENTERED INTO BETWEEN THE RAILWAYS AND THEIR CLASSES OF EMPLOYEES AS SPECIFIED HEREIN AT THE SUGGESTION OF THE BOARD OF CONCILIATION APPOINTED UNDER "THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907."

At the suggestion of the Board of Conciliation, it is agreed between the Railways and their Engineers, Firemen, Conductors, Trainmen, Yardmen, and Telegraphers, including all employees governed by the respective schedules thereof, as follows:

1. Effective July 16th (August 1st for Grand Trunk Engineers and Firemen), 1921, the Railways will apply and the Employees will accept tentatively, the following changes in rates of pay as compared with rates of pay in effect at June 30th, 1921.

Engineers and Firemen—

	Decrease of	
	Per Mile Cents.	Per day Dollars.
Passenger Service—		
Engineers.....	.48	\$0.48
Firemen.....	.48	\$0.48

Freight Service—

Engineers.....	.64	\$0.64
Firemen.....	.64	\$0.64

		Per day Dollars.
Yard Service—		
Engineers.....		\$0.64
Firemen.....		\$0.64

		Per day Dollars.
Hostler Service—		
Hostlers.....		\$0.64

Conductors and Trainmen—

	Per mile Cents.	Decrease of	
		Per day Dollars.	Per month Dollars.
Passenger Service—			
Conductors....	.4	\$0.60	\$18.00
Baggagemen....	.4	\$0.60	\$18.00
Brakemen.....	.4	\$0.60	\$18.00

Through and Irregular
Freight Service—

	Per mile Cents.	Per day Dollars.
Conductors.....	.64	\$0.64
Brakemen.....	.64	\$0.64

Way Freight Service—

Conductors.....	.64	\$0.64
Brakemen.....	.64	\$0.64

Per day
Dollars.

Yard Service—

Foremen.....	\$0.64
Helpers.....	\$0.64
Switch Tenders.....	\$0.64

Telegraphers—

Decrease in aggregate the equivalent of:

	Per hour Cents.	Per month Dollars.
Agents and operators....	6	\$12.24
Assistant Agents.....	8	\$16.32
Train Despatchers.....	8	\$16.32
Linemen.....	8	\$16.32

Based on the number of positions the amount arrived at in the aggregate, will be applied to adjust the rates for the same number of positions of Agents and Operators, Assistant Agents, and Train Despatchers, respectively, on each General Superintendent's District, as may be agreed upon mutually by the District Officers and representatives of the Employees. For Linemen the rates will be similarly adjusted between the Superintendents of Telegraphs and representatives of the Employees.

2. Within fifteen days after notice has been given by either the Railways or the Employees to the other respectively, the representatives of both will collectively confer further in regard to rates of pay, and, except as may be otherwise mutually agreed, any rates of pay finally agreed upon will be effective July 16th, 1921. Any necessary adjustments to be made accordingly; provided, however, that any such adjustments will not operate to bring about any reclaim from Employees of any amounts which, prior to the date of any final agreement, may have been paid to them or any of them, pursuant to the terms of this tentative agreement.

Should such conference fail to bring about an agreement in regard to rates of pay, the present Board of Conciliation is to again meet upon twenty one (21) days' notice from either party, or such earlier date as may be possible, and is to hear again the parties on the question of rates of pay, and, after such hearing, is to make a report thereon in accordance with the provisions of "The Industrial Disputes Investigation Act, 1907," in the same manner and to the like effect as if the dispute in regard to such rates of pay was the original dispute in connection with which the Board of Conciliation was established. If no notice is given to the present Board of Conciliation prior to July 15th, 1922, asking

that it should again meet and hear the parties, it is understood that the services of the Board of Conciliation are no longer required on the question of rates of pay.

There will be no changes made effective in schedule rules before 30 days after January 1st, 1922.

At any time hereafter any party desiring a change in existing schedule rules may, on giving not less than thirty days' notice to the other party, call upon the other party to confer with respect to such rules, and any proposed changes therein, and negotiations shall then be carried on in the usual manner. In the event of failure to come to an understanding with respect to such rules the parties will, unless otherwise mutually agreed, within ten days of such failure, jointly apply to the Department of Labour for the appointment of a Board of Conciliation and Investigation with regard thereto; provided, however, that this understanding does not pre-
judice the right of either party to apply on its own behalf for a Board.

In the event of there being a revision of schedule rules by and between any of the Railway Companies and any class of its employees represented in this agreement prior to July 15th, 1922, and in the event that the date on which such revised rules are to become effective remains in dispute, that question shall be submitted to and decided by the members of the present Board. A decision of a majority of the members of the said Board shall be binding on the Railway Company and its Employees concerned.

Executed at Montreal this eighth day of October, 1921.

(Sgd.) G. HODGE,
For the Canadian Pacific Railway
Company.

(Sgd.) F. S. MACLENNAN,
Chairman Board of Conciliation.

Report of Committee of Conciliation, Mediation, and Investigation, in dispute between the Intercolonial and Prince Edward Island, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees

In the matter of the Conciliation and Labour Act and of the difference between the Canadian National Railways and the Canadian Brotherhood of Railroad Employees.

Ottawa, October 11, 1921.

To the Honourable
The Minister of Labour,
Ottawa, Ontario.

Sir,

We beg to report that, after several meetings of the Board, and considerable negotiations which took place between the employer and the employees without the Board being actually present, we found it impossible to bring the parties into agreement.

The railroad company was represented before the Board by F. P. Brady, and A. E. Crilly, and the employees were represented by A. R. Mosher, C. E. Cole, J. E. Leger, R. Dykes, C. H. Minchin, and William Hardiger, all of whom took an active part in the discussion and gave evidence.

We beg to remain,

Your obedient servants,
(Sgd.) H. P. HILL,
Chairman.

(Sgd.) HAROLD FISHER.

(Sgd.) GEORGE D. KELLEY.

**PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT
No. 1**

SEVEN new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department, beginning with Case No. 104. (Earlier decisions of the Board appeared in the LABOUR GAZETTE for May, 1921, on pages 662 to 668, and in previous issues.) The hearing on Case No. 103 has been deferred on the request of the parties concerned. Case No. 104 has reference to the dismissal of employees of the Temiskaming and Northern Ontario Railway. Case No. 105 relates to a controversy between the Kettle Valley Railway and railway conductors and trainmen as to the date when increases authorized by Supplement No. 16 to General Order No. 27 should become effective, and as to the payment of conductors and trainmen in snow plough and flanger service. Case No. 106 deals with the amount to be paid railway conductors and trainmen by the Kettle Valley railway as mountain dif-

ferential, payment of time for switching and detention at terminals, etc., and number of trainmen in passenger crews. Cases 107 to 110 have reference to various differences between employees and the Canadian National Railways (Eastern Lines). Case No. 107 relates to the appointment of general and assistant general yardmasters. Case No. 108 relates to the dismissal of two pumpmen. Case No. 109 deals with a controversy over the appointment of a foreman. Case No. 110 has reference to the laying-off of a sectionman and his replacement by a man who was his junior.

Case No. 104.—The Temiskaming and Northern Ontario Railway and the Brotherhood of Railroad Trainmen.

Three employees of the Temiskaming and Northern Ontario Railway were arrested for the theft of goods in transit and their services were dispensed with

by the management of the railway. Two of them were brought to trial, the third man having died, but the accused were found "not guilty." The Brotherhood of Railroad Trainmen requested that these two employees be re-instated and paid for all time lost. The Commissioners of the Railway declined to re-instate them, as they believed in view of the evidence that these men were guilty of theft. The employers submitted to the Board a statement signed by the superintendent of the railway and a copy of the evidence in the case, including the judge's charge to the jury.

The decision of the Board was as follows:—

After careful consideration of all written information and evidence placed before the Board, and the oral evidence given by the representatives of the respective parties, the Board's decision is that the request of the employees for re-instatement of the two individuals specified, with pay for time lost, is denied.

Case No. 105.—The Kettle Valley Railway Company and the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen.

A controversy arose between the Kettle Valley Railway Company and the Brotherhood of Railroad Trainmen as to the date on which certain increases in pay should become effective under Supplement No. 16 to General Order No. 27. There was a further disagreement as to the payment for way freight rates to conductors and trainmen in snow plough and flanger service.

The company claimed that in January, 1919, the matter of rates of wages for enginemen and trainmen on its lines was taken to the Canadian Railway Board of Adjustment No. 1, and a decision was given in case No. 16 which was further amplified in two supplementary decisions. As a result the company was ordered to pay certain rates for the retroactive period, which was done. The company and employees then negotiated an agreement dated November 1, 1919, and rates of pay for all classes of service

were agreed on. The agreement, however, was not actually signed on account of a difference of opinion as to rules and regulations. The company claimed that as it had paid the rates ordered by the Board previous to November 1, 1919, and the rates agreed upon by the Company and the men after that date, it should not be called upon to pay any other rates to freight conductors. With regard to rates for snow plough and flanger service the company claimed that through freight rates should apply, this being the practice on most railways in Canada.

The employees contended that Supplement No. 16 to General Order No. 27 effective January 1, 1919, provided a rate of pay for freight conductors of 5.40 cents per mile and \$5.40 per day, and that this rate was not paid by the Kettle Valley Railway Company until November 1, 1919, whereas it should have been paid from January 1, 1919. The employees therefore claimed for freight conductors back pay from January 1 to November 1, 1919, at the rate of 22 cents per hundred miles to April 1, and from April 1 to October 31, at the rate of 23 cents per hundred miles.

With regard to rates of pay for engineers and firemen in snow plough and flanger service, the men quoted Question 85, Interpretation No. 1 to Supplement 16, General Order No. 27, as follows: "What rates shall apply to conductors and trainmen where under schedule provisions or accepted practices, engineers and firemen receive local freight rates?" The decision was "Not less than local freight rates." The men claimed that a schedule of rates of pay, etc., which represented an agreement between the Kettle Valley Railway and its locomotive engineers, firemen and hostlers, effective September 15, 1919, provided that engineers and firemen in snow plough and flanger service would be paid way freight rates. The men contended, therefore, that conductors and trainmen employed in snow plough and flanger service on and after September 15, 1919, should receive back pay at the rate of

way freight differential per 100 miles applicable to their respective classes.

The Board declared that in previous cases from the Kettle Valley Railway it had endeavoured to maintain for the men an equitable comparison with rates paid similar classes on the British Columbia division of the Canadian Pacific Railway. The Board found that on this division of the Canadian Pacific Railway trainmen were paid through freight rates in snow plough and flanger service.

The decision of the Board was as follows:—

In the case of the rate for conductors in through freight service, the Board decides that the rate shall be 5.40 cents per mile or \$5.40 per day or 100 miles, and the effective date thereof is as of January 1, 1919.

In the case of way freight rates being paid to conductors and trainmen in snow plough and flanger service, the claim of the employees is denied.

Case No. 106.—The Kettle Valley Railway Company and the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen.

There were three points in dispute between the Kettle Valley Railway Company and its conductors and trainmen—First, as to amount to be paid per 100 miles as mountain differential over the entire mileage of the first, second and third subdivisions. Second, payment of time for switching and detention at terminals, junction, and turn-around points. Third, as to increasing passenger crews to not less than three men.

With reference to the first point, the company claimed that in accordance with a ruling of the Board it had paid up to November 1, 1919, 35 per cent of the mountain rate differential in effect on the Canadian Pacific between Lake Louise and Revelstoke, amounting to 36¾ cents per hundred miles, and after November 1, 1919, the company agreed to allow a differential of 50 cents per hundred miles. It contended that it should not pay more than this. With

regard to the second point, payment for etc., the company contended that on this railway where of necessity there are short runs passing through junctions, or turn-around points, the time occupied in switching and detention should be switching and detention at terminals, used to make up the day of less than 100 miles, and that at terminals for short runs, time occupied in switching and detention should be used to make up the day of less than 100 miles. With regard to the third point, the number of trainmen on a passenger train, the company contended that for the light passenger train in service, the number of trainmen then employed (one conductor, one brakeman and one baggage and expressman) was sufficient for the prompt and safe handling of trains.

The employees contended — First, that a mountain differential of 81 cents per 100 miles should be paid to conductors and trainmen over the entire mileage of the first, second and third subdivisions; Second, that switching and detention at terminals, junction points and turn-around points constitute service separate from road miles and should be paid as such, regardless of the miles run. With regard to the third point, the men urged that the following clause should be incorporated in the trainmen's schedules: "All passenger trains will have at least one baggageman and one brakeman. All passenger trains of eight cars or more will have two brakemen and one baggageman, if there is a local baggage car on the train; one or two box baggage cars or refrigerator cars to count as one car, and three or four as two cars."

The decision of the Board on the three questions involved was as follows:—

First Question: The Board decides that 50 cents per 100 miles for mountain territory differential on districts 1, 2 and 3 of the Kettle Valley Railway should be regarded as a consistent and equitable differential rate.

Second Question: As to the payment of time for switching and detention at terminals, junction points and turn-around points in addition

to pay for a minimum day on runs of less than 100 miles, the Board's decision is that it would be inconsistent to authorize the adoption of these rules with the understanding that an arbitrary extra allowance for switching and detention at terminals, junction, points or at turn-around points should be paid on runs of less than 100 miles.

Third Question: As to increasing passenger crews to not less than three men on each crew, the Board found that the schedule of the Western Lines of the Canadian Pacific Railway provides that "All passenger and mixed trains will have at least one baggageman and one brakeman." The Board decides that it would be inconsistent to order that an additional employee in the person of a baggageman or a brakeman, from the train service should be placed on the trains in question, and the position of the Company is, therefore, sustained.

Case No. 107.—The Canadian National Railways (Eastern Lines) and the Brotherhood of Railroad Trainmen.

A controversy arose between the Canadian National Railways and the Brotherhood of Railroad Trainmen with regard to the abolition of the position of yardmasters and the appointment of general and assistant general yardmasters in their place on the portion of the Canadian National Railways formerly known as the Canadian Government Railways, Lines East. It was claimed by the men that in Case No. 75 the decision of the Board was that "unless the men and the company can otherwise agree, these yardmasters having heretofore been specified in train and yardmen's schedule under the same conditions of employment as other yardmen, and with specified higher rates on an hourly basis, shall be paid on the same basis as to hours of service, overtime basis, and relative hourly rates with yard foreman." In a schedule agreement dated at Montreal, February 18, 1921, it was agreed that yardmasters would be paid at the rate of 91 cents per hour, 8 hours per

day, and time and one-half for overtime. The men claimed that since the day of the agreement the management had abolished the position of yardmaster in almost every one of their yards and in their place had appointed general yardmasters for days, and assistant yardmasters for nights, on a monthly basis of \$270 and \$250 respectively, with a twelve-hour day. The men did not object to the appointment of general yardmasters or the fixing of their salary so long as they had other yardmasters working under them on the same shift, but they objected to men being appointed with the title of general yardmasters to do the work formerly done by yardmasters at a relatively higher wage scale.

The management contended that the agreement with the men's organization had not been ignored, as the new position carried greatly extended jurisdiction and supervision to cover all yard (including clerical staff) and certain station staff formerly controlled by agents or terminals agents. It was further claimed that the change had reduced operating cost and improved the efficiency of the staff. A general yardmaster on a monthly salary had heretofore been maintained at Halifax, and occasionally at St. John.

The decision of the Board was as follows:—

The Board decides under the circumstances applying in the particular cases in question, that the employees who have actually performed the duties of yardmaster under the titles of General Yardmaster and Assistant General Yardmaster, so-called, shall be paid schedule yardmasters' rates for time actually worked with a maximum of twelve hours for each day worked, and at schedule rates and under schedule conditions, if any, in future.

Case No. 108.—The Canadian National Railways (Eastern Lines) and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Two travelling pumpmen on the Halifax and South Western Railway, a branch of the Canadian National Railways, were dismissed on 15 day's notice, and the work which they had been doing was contracted for locally in order to reduce the excessive cost. The employees claimed that these men were unjustly treated because there was no fault found with them, and that they should be reinstated to the senior pumpmen positions on their superintendents' division and paid for all time lost.

The management contended that the positions had been abolished on account of the excessive cost of pumping, and the work contracted for locally, and they declined to reinstate the two men.

The Board gave the following interim decision:—

That the case be remanded back to the parties to see if by further negotiation some equitable settlement of this controversy cannot be reached, and in the event of failure to reach settlement the case will be again dealt with by the Board.

Case No. 109.—The Canadian National Railways (Eastern Lines) and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

A dispute arose between the Canadian National Railways (Eastern Lines) and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers over the appointment of a foreman. The men claimed that the individual appointed had been made foreman in June, 1920, after only six month's service in preference to men who had been in the service for a number of years, and after being laid off

through reduction in staff in December, 1920, he was a few months later again taken into the service as foreman. They contended that the position of foreman should have been given to the senior applicant, and that he should be still given the position and paid for all time lost. The railways' officers stated that bids for the position of foreman had been requested, but the employee who made the only acceptable bid had later declined the position. They decided that the applicant whose claim was urged by the employees was not competent or qualified for the position.

By decision of the Board the claim of the employees was denied.

Case No. 110.—The Canadian National Railways (Eastern Lines) and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

A sectionman, S—, who had been employed on the Canadian National Railways for about three years, was laid off to give preference to a junior man. The employees contended that the following clause of the Maintenance of Way schedule had been violated: "In the event of reduction of staff those longest in the service shall have preference of employment in their respective seniority territory," and claimed that S— should be reinstated and paid for all time lost. The railways contended that S— was hired during the war when competent trackmen were not available, that at that time he owned and operated a farm, and does so now; that M—, who was given the preference, is more efficient and he is also a returned soldier and a permanent employee, and should have the preference, and they declined to reinstate S—.

The decision of the Board was as follows:—

The Board decides that sectionman S-- was entitled to preference of employment in his seniority territory over sectionman M-- at the time the reduction in staff was made in October,

1920. The Board further decides that sectionman S-- shall be reinstated in accordance with the seniority rights he holds, and shall be paid the difference between any amount he may have received in any employment in the meantime, and the amount he would have earned had he continued in the service of the railways in accordance with his seniority rights.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1921

NO new strikes were reported as having commenced during October. There were in existence during the month 16 strikes, involving approximately 2,229 employees and a total time loss estimated at 54,704 working days, as compared with 22 strikes, 3,535 workpeople and 69,100 working days in September, 1921; and 21 strikes, 6,168 workpeople and 72,893 working days in October, 1920. None of the strikes in existence terminated during the month. The following 16 strikes, involving

2,229 workpeople were on record on October 31; loggers, Ocean Falls; employees of steel and coal companies, Sydney; gauge men, Sydney; machinists, Orillia; compositors, Montreal; compositors, etc., Vancouver; photo engravers, Montreal; photo engravers, Ottawa; printers, Montreal; printers, Ottawa; printers, Toronto; printers, Winnipeg; printers, bookbinders and pressmen, Halifax; typesetters, bookbinders and pressmen, Hamilton; cigar makers, Vancouver and shoeworkers at Toronto.

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

LUMBERING.—The Lumber Workers' Industrial Union still claim that a strike exists at Ocean Falls, B.C. On August 1, this alleged strike involved 280 employees, but at the end of October, 80 were reported as being involved.

METALS, MACHINERY AND CONVEYANCES.—In this group there was a con-

siderable reduction in time loss, there being only 3 strikes, involving 181 employees and an approximate time loss of 4,706 working days. The unterminated strikes were those of the employees of the steel and coal companies at Sydney, and the machinists of one firm in Orillia.

PRINTING AND PUBLISHING.—The situation in this group has remained practically stationary during the past two months. At the end of October there were 10 strikes, involving 1,814 employees and an approximate time loss of 47,164 working days.

STRIKES AND LOCKOUTS DURING OCTOBER, 1921

Industry or Occupation.	Particulars.	No. of employees affected.	Time loss in working days.
Strikes commencing prior to October, 1921.			
LUMBERING—			
Loggers, Ocean Falls, B.C.....	Commenced August 1. Against increase in working hours. Un-terminated.	80	2,080
METALS, MACHINERY AND CONVEYANCES—			
Employees of steel and coal companies, Sydney, N.S.....	Commenced November 22, 1920. For increased wages and improved working conditions. Un-terminated.	150	3,900
Gauge men, Sydney, N.S.....	Commenced June 9. In sympathy with employees of the steel and coal companies. Un-terminated.	16	416
Machinists, Orillia, Ont.....	Commenced May 9. Employees objected to being taken off their own work and having to divide up other work. Un-terminated.	15	390
PRINTING AND PUBLISHING—			
Compositors, Montreal, Que.....	Commenced June 14. Objection of men to perform work that came from shop where strike existed. Un-terminated.	25	650
Compositors, etc., Vancouver, B.C.....	Commenced May 2. For increased wages and 44-hour week. Un-terminated.	46	1,196
Photo engravers, Montreal, Que.....	Commenced May 2. For shorter hours. Un-terminated.....	63	1,638
Photo engravers, Ottawa, Ont.....	Commenced June 1. For increased wages and 44-hour week. Un-terminated.	13	338
Printers, Montreal, Que.....	Commenced July 1. For increased wages and 44-hour week. Un-terminated.	370	9,620
Printers, Ottawa, Ont.....	Commenced June 1. For increased wages and 44-hour week. Un-terminated.	153	3,978
Printers, Toronto, Ont.....	Commenced June 1. For increased wages and 44-hour week. Un-terminated.	846	21,996
Printers, Winnipeg, Man.....	Commenced July 1. Alleged lockout when employees were refused a renewal of agreement. Un-terminated.	220	5,720
Printers, bookbinders and pressmen, Halifax, N.S.....	Commenced May 2. For shorter hours. Un-terminated.....	45	1,170
Typesetters, bookbinders and pressmen, Hamilton, Ont.....	Commenced May 2. Alleged violation of agreement by employers. Un-terminated.	33	855
FOODS, LIQUORS AND TOBACCO.—			
Cigarmakers, Vancouver, B.C.....	Commenced May 31. Against introduction of new machinery. Un-terminated.	18	468
LEATHER—			
Shoeworkers, Toronto, Ont.....	Commenced April 26. Against a reduction in wages. Un-terminated..	11	286

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING SEPTEMBER, 1921

THE following details with regard to strikes and lockouts in the United Kingdom during September, 1921, based on returns from employers and workpeople, are taken from the October issue of the British *Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.—The number of trade disputes involving a stoppage of work reported to the Department as beginning in September, was 57, as compared with 62 in the previous month, and 93 in September, 1920. In these new disputes over 15,500 workpeople were directly involved and about 500 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition to the numbers involved in new disputes, nearly 4,000 workpeople were involved, either directly or indirectly, in 43 other disputes which began before September, and were still in progress at the beginning of that month. The total number of new and old disputes in progress in September was thus 100, involving about 20,000 workpeople, and resulting in a loss during September of nearly 150,000 working days.

CAUSES.—Of the 57 new disputes, 25, directly involving nearly 8,000 workpeople, arose out of proposed reductions in wages; 10, directly involving nearly 2,000 workpeople, on other wages questions; 12, directly involving over 4,000 workpeople, on questions respecting the employment of particular classes or persons; 5, directly involving nearly 1,000 workpeople, on details of working ar-

rangements; and 5, directly involving 1,000 workpeople, on other questions.

RESULTS.—During September, settlements were effected in the case of 23 new disputes, directly involving about 9,000 workpeople, and 15 old disputes, directly involving nearly 2,000 workpeople. Of these disputes, 7, directly involving over 1,000 workpeople, were settled in favour of the workpeople; 12, directly involving nearly 7,000 workpeople, in favour of the employers; and 19, directly involving nearly 3,000 workpeople, were compromised. In the case of 13 disputes, directly involving over 3,000 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during September in all the disputes in progress:—

Groups of Trades.	Number of disputes			Number of workpeople involved in all disputes in progress in September.	Aggregate duration in working days of all disputes in progress in September.
	Started before September 1.	Started in September.	Total.		
Building.....	9	9	18	3,000	18,000
Mining and quarrying..	5	6	11	4,000	26,000
Metal, engineering and shipbuilding.....	13	9	22	3,000	34,000
Transport.....	3	12	15	6,000	36,000
Other trades.....	13	21	34	4,000	32,000
Total, September, 1921	43	57	100	20,000	148,000
Total, August, 1921...	43	62	105	26,000	213,000
Total, September, 1920	119	93	212	104,090	1,109,000

CONVENTIONS OF THE AMALGAMATED POSTAL WORKERS AND THE FEDERATED ASSOCIATION OF LETTER CARRIERS

REPORTS have recently been received by the Department relative to the third annual convention of the Amalgamated Postal Workers held at Victoria, B.C., on August 22 to 25, and of the nineteenth convention of the Federated Association of Letter Carriers held at Montreal, Que., September 1 to 3.

Amalgamated Postal Workers

The convention of the Amalgamated Postal Workers was attended by about 25 delegates, a fraternal delegate from the Dominion Postal Clerks' Association, and also a fraternal delegate from the Federated Association of Letter Carriers. The chair was taken by the president, Mr. Christian Sivertz. A financial statement showed a balance on hand of \$510, the receipts for the year were \$4,130 and the expenditures \$4,297. The convention favoured the formation of a Dominion-wide organization of all federal employees, and a resolution was passed recommending "that the constitution of the Amalgamated Postal Workers be changed to conform to the principles outlined in the tentative constitution of the Canadian Civil Service Association as printed in the 'Organizer' during the months from January to April, 1921." Among other resolutions adopted were the following: That if a postal worker fill a position carrying a higher salary for three months or more, he shall be paid the salary pertaining to that position, irrespective of his being ultimately appointed to it; That the Post Office Department be asked to fill all vacancies on the staffs of the various offices from among the temporary employees, according to their length of service; that the Department be asked to apply the regulations which govern the examination on Postal Laws to that of case examinations—namely, six months' notice to be given immediately prior to the annual statutory increase, and that

such examination be based upon the work at which the clerk has been engaged; that the Department be requested to make the term of residence to British subjects in the Dominion one year prior to date of application for Civil Service position; That letter carriers be promoted in accordance with the classification of the Civil Service, so that the promotions shall be filled from the letter carriers instead of solely from the clerical staff as in the past; That leave of absence of six months or under, shall in no wise affect salary increases; That other things being equal, seniority shall count; That the salary demands for the coming fiscal year be as follows—Letter carriers, minimum salary, \$1,160, maximum \$1,560, with street car transportation, clothes, etc., as at present; clerks, minimum salary \$1,400, maximum \$1,800, higher grades to be increased in strict proportion; that where a letter carrier performs duties which call for knowledge varied and extensive, or in excess of that required for ordinary carriers, he be granted "senior letter carrier" position; That the organization press for the adoption of a pension scheme; that the interest paid on the Retirement Fund be increased to 6 per cent; and that a "first-aid" outfit be supplied all city post offices.

The following officers were elected by the proportional representation method: president, F. R. Sutton, Winnipeg; vice-presidents, British Columbia, Fred Knowles, Vancouver; Manitoba, S. C. Berridge, Brandon; Alberta, F. M. Davies, Calgary; Saskatchewan, G. W. Bragg, Regina; Ontario, H. T. Chenells, Sault Ste. Marie; General Secretary-Treasurer, J. A. Elrick, Winnipeg, Man.

It was decided that the National Council should name the place of the next convention.

Federated Association of Letter Carriers

About 50 delegates attended the convention of the Federated Association of Letter Carriers. Mr. W. A. McDonald, the president, occupied the chair. The report of the Finance Committee showed a deficit of \$600 and gave the estimated expenditures for 1921-1922 as \$4,500. The convention adopted a resolution in favour of a Dominion-wide amalgamation of postal employees, and referred to the formation of the Canadian Federation of Postal Employees which was accomplished in 1920 due to the amalgamation of the Dominion Postal Clerks' Association and the Federated Association of Letter Carriers. The establishment of Whitley Councils was recommended. A thirty per cent increase on present salaries was demanded by the convention. An alternative motion of a straight salary of \$1,860 without bonus was defeated, though some opposition to the bonus was registered, the system being characterized as unsatisfactory to

employees, inasmuch as it was subject to fluctuation. It was decided that no fraternal delegate should be sent to the Amalgamated Postal Workers "until such time as they confine their efforts within the post office service"; that the per capita tax should be reduced; and that the convention should be held biennially instead of annually as had been decided at the convention at Peterborough in 1920.

The following officers were elected: president, E. V. Browning, Toronto, Ont.; secretary, A. McMordie, Toronto; assistant secretary, J. Archer, Hamilton; vice-presidents—Alberta, Mr. Captick, Calgary; New Brunswick, J. E. Moore, St. John; Nova Scotia, Mr. Day, Halifax; Ontario, Tom Moore, St. Thomas; Prince Edward Island, Mr. Trainer, Charlottetown; Quebec, J. A. Bernier; Saskatchewan, A. E. Webb, Moose Jaw; British Columbia, R. Wight.

It was decided to hold the 1923 convention at Toronto, Ont.

CONVENTION OF UNITED MINE WORKERS OF AMERICA

THE twenty-eighth consecutive convention (the fifth biennial convention) of the United Mine Workers of America was held at Indianapolis, Ind., during September 20, to October 5. There were present 2,257 delegates representing a membership of 515,243, and entitled to 4,736 votes. The president, Mr. John L. Lewis, was in the chair.

The report of the secretary-treasurer for the fiscal years ending July 31, 1920, and July 31, 1921, gave the total paid up membership for 1920 as 376,447 and for 1921 as 442,057. There was an exonerated membership in 1920 of 59,803, and in 1921 of 73,186. For the two-year period the total income amounted to \$6,699,133, and the expenditures to \$7,295,137. A sum of \$3,654,675 had been expended for aid to various districts. Loans to the International Union amounted to

\$588,500. During January and February, 1921, \$738,983 had been raised by the assessment of \$1 a month upon the membership to meet pressing demands due to the strike in Alabama and the Mingo county fields in West Virginia.

The convention discussed at length an injunction about to be brought against the Union and certain coal operators by the Borderland Coal Corporation of West Virginia to restrain union officers from collecting dues and assessments from their members and to restrain the operators in question from employing the "check off" system. A proposal that the miners go on strike and remain idle until the suit was withdrawn from the courts was rejected, but the delegates voted unanimously to instruct the international officers to use every lawful

means to resist the issuance of the injunction. The injunction proceedings are described more fully in another article in this issue. It was decided that an assessment of \$1 a month for three months should be levied on the membership to increase the international funds. The international officers were also instructed to petition the President of the United States urging that a more thorough and impartial investigation be made into the underlying causes of the present industrial disturbances in West Virginia; and to have prepared suitable legislation for presentation to Congress seeking the abolition of mine guards, Baldwin-Felts detectives, and the company-paid deputy sheriff system now in force in the coal regions of West Virginia and other states.

The convention upheld the action of the International Executive Board in their decision that District No. 12 (Illinois) shall publish an itemized statement of the expenditure of \$27,000 of the District money in connection with the suppression of a strike in 1919, and also upheld their action in directing President Howat of the Kansas district to put men back to work who were idle in violation of contract at the Deal and Reliance coal mines. The convention approved a recommendation respecting the Kansas Court of Industrial Relations to the end that a proper test of its constitutional features be made and that the legal assistance of the International organization be accepted by the Kansas mine workers.

A resolution was passed urging a working alliance with the railroad workers' unions for the purpose of securing the adoption of the Plumb plan for nationalization of railroads as the initial step in the fight for the principle of nationalization, with the understanding that the alliance will continue to press the issue until the principle of nationalization has been extended to embrace the coal mining industry of both the United States and Canada. By another resolution the International officers were

instructed to petition President Gompers of the American Federation of Labour to convene a conference of officers of the various international unions now comprising the American Federation of Labour, the farmers' organizations and various unaffiliated organizations, for the purpose of getting a more cohesive political movement on the part of farmers and labour and one that will push forward the political education of the worker and producer in the hope of forming a labour party.

Other resolutions adopted were: That District conventions and State Federation of Labour conventions be asked to take up the question of rent for workers' houses to the end that legislation may be enacted that will insure suitable, sanitary and healthful workmen's dwelling houses at a reasonable rental; that various district organizations in states where they have jurisdiction endeavour to have laws enacted to protect the worker and his family against eviction during times of industrial dispute, and prevent eviction in all cases based on prejudice against the tenant, and that upon request the International organization shall lend its support to have such legislation enacted; That the International Executive Board request a conference between its representatives and the American Federation of Labour to study and formulate a programme for the enactment of unemployment and national health insurance legislation; That the President of the United States be urged to use his power and influence to secure either a new trial or a full pardon for Thomas J. Mooney and Warren K. Billings; That they favour the repeal of the espionage act and granting of amnesty to all political prisoners; That they favour self-determination and the right of self-government for the people of Ireland and all other small nationalities capable of self-government.

The consideration of wage scale

matters was postponed to a special convention at Indianapolis in February, 1922.

The date for the holding of the regular biennial conventions was changed from the third Tuesday in September to the fourth Tuesday in

January, the next regular convention to be held in January, 1924, when it was decided that the question of the establishment of co-operative banks and also the establishment of an International Headquarters Building should be dealt with.

QUADRENNIAL CONVENTION OF THE BROTHERHOOD OF RAILWAY CARMEN OF AMERICA

THE fourteenth convention of the Brotherhood of Railway Carmen of America was held at Toronto, Ont., August 8-22, with 1,296 delegates in attendance. Addresses were delivered by speakers of national reputation, members of the Brotherhood and officials of a number of other labour organizations. There was also held at this time the eighth convention of the ladies' auxiliary of the Brotherhood.

The general president, Mr. M. F. Ryan, who occupied the chair, stated that the Brotherhood ranked fourth in membership among the organizations in America affiliated with the American Federation of Labour. He reported that there was now approximately a four times greater membership than when the convention met at Fort Worth, Texas, in 1917, and that as a class it had received since that time a wage increase of approximately 100 per cent. Among other achievements of the period was mentioned the negotiation of national agreements (1) between the Six Federated Shops Crafts and the United States Railroad Administration, and (2) for Canada, through the agency of Division No. 4, Railroad Employees' Department with the Canadian Railway Labour Board. These agreements had resulted in the adoption by all the principal railroads in the United States and Canada of a general standardization of working conditions for all classes of employees covered thereby; the 8-hour day; time and one-half for overtime and for time worked on Sundays and holidays; a uniform classification for mechanics, apprentices

and helpers on all railways under federal control, and the establishment of apprenticeships in all branches of the trade. A number of short line railways not under federal control had also benefited by these agreements. For employees in the Car Department substantial progress had been made in securing a proper classification by designating and classifying mechanics, apprentices and helpers, and thereby raising the standard and dignity of these employees.

The report of the secretary for the period September 1, 1917, to June 30, 1921, showed 930 lodges organized and an increase in membership of 129,872, there being a total of 1,465 lodges and a paid-up membership of 182,397. The receipts for the period amounted to \$4,738,749, the expenditures to \$2,124,213. The balance on hand at the end of the period was \$2,966,953 as compared with \$352,417 on September 1, 1917. Claims paid in connection with death benefits amounted to \$369,100, and for strike pay there was expended \$49,526.

Various changes to the constitution were approved by the convention. It was decided to change the per capita tax on all members from 50 cents straight to 75 cents for mechanics, 60 cents for apprentices and 50 cents for car cleaners; to add to the constitution a section captioned "Trade Educational Bureau," officially recognizing the bureau inaugurated in November, 1920, by the Brotherhood for the dissemination of matter pertaining to trade education, and

providing for the appointment of directors to carry on the work; to enlarge the death benefit department by providing for payments for total disability, total disability to be construed as the loss of one leg or both, one arm or both, total blindness, total disability of a limb or total and permanent disability through accident or disease, provided such accident or disease does not come through abuse of alcoholic drinks or narcotics. It was decided to delete the word "male" from a section of the subordinate lodge constitution covering the qualifications for membership. The organization of coloured persons into separate lodges where their employment has become a permanent institution was authorized, such lodges to be under the jurisdiction of the nearest lodge for white members, same to be represented in all meetings of joint protective boards, federation meetings or conventions by a white delegate. It was also decided to introduce certain new clauses defining the status of apprentices, which clauses were in part as follows:—

Any person engaging himself to learn the carman's trade shall serve an apprenticeship of four years of 290 days each. Any apprentice failing to comply with this provision shall stand suspended from any and all benefits of the Grand Lodge and the Local Lodge of which he is a member until he returns to his employer. Failing to return to his employer within three months shall be sufficient cause for his expulsion. The ratio of apprentices shall be one apprentice for every five journeymen carmen employed. No person shall engage himself as an apprentice until he has reached the age of 16 years, and no person shall engage himself as an apprentice after he has reached the age of 21 years, except that any person who has worked as a carman's helper for two years in the shop where he desires to become an apprentice may, if he is not at that time past the age of 30 years, engage himself to his employer as an apprentice. Such person shall be known as a helper apprentice, and shall serve three years of 290 days each in learning the carmen's trade, during which time he shall be governed by the rules and laws applicable to apprentices. The number of helper apprentices shall at no time exceed 50 per cent of the number of regular indentured apprentices in any shop. Apprentices, upon completion of their apprenticeship, shall receive not less than

the minimum rate of pay for carmen, if retained in the service, and they shall become the youngest mechanic in serving at that point.

The convention voted in favour of an 8-hour day and a 44-hour week; the establishment of old age pensions; the co-operation with all trade, labour and farmer organizations to secure the passage of such laws as are beneficial to the working class; the abolition of piece-work and the bonus system, and the establishment of joint conferences of employers and employees to deal with such matters as wage rates and working conditions; the establishment of a labour press that shall be free from all control of special interests and wholly devoted to the interests of the labouring man, and the supporting of *Labor*, a paper published in Washington, D.C., under the direction and control of a committee appointed by the Brotherhood and other standard railway organizations; and the release of political prisoners held in the United States. Endorsation was given the Plumb plan for railroad ownership, management and operation. A resolution was adopted requesting the executive council of the American Federation of Labour to assist the recognized railroad organizations to have proper legislation enacted to make effective the principles of public ownership and democratic operation of the railways of the United States, and to devise and publish the necessary legislative programme. A resolution was adopted asking that the executive board be directed to prepare a bill to be presented at the next sessions of the legislatures of Canada and the United States, prohibiting the use of paint spraying machines and devices which are used for the purpose of applying any paints or material containing lead, arsenic salts, mercury, wood alcohol, Paris green and many other ingredients which by absorption, inhalation or otherwise are injurious or dangerous to the health of the workmen. Another resolution strongly favoured the principle of a federal workmen's compensation law which has been introduced

in the United States Congress "to provide compensation for persons suffering from injuries while engaged in interstate or foreign commerce, and for the dependants of such persons in case of death, and for other purposes." The convention was opposed to the introduction of state constabulary; the system of contract labour as now employed in federal prisons of the United States; and the Allen Industrial Court Law of Kansas. A proposal for the establishment of a Brotherhood bank was left in the hands of the executive, with instructions to draft, for submission to the mem-

bership, a plan for such an organization. It was decided that Kansas City, Missouri, should be the permanent headquarters of the Brotherhood, and in accordance with this action the executive was authorized to purchase or build a fireproof building in which the headquarters should be located and where future conventions should be held.

The General President, Mr. Martin F. Ryan, was re-elected, as was also the General Secretary-Treasurer, Mr. E. W. Weeks. Mr. Frank McKenna, of Cranbrook, B. C., was elected as Canadian Vice-President.

INJUNCTION AGAINST UNITED MINE WORKERS OF AMERICA

ON September 24 the Borderland Coal Corporation whose mines are situated in West Virginia gave notice that it would apply in the United States District Court, Indiana, for a temporary injunction against officers and members of the United Mine Workers of America and certain coal companies. The purpose of the injunction was to restrain officers of the Union from collecting dues and assessments from their members and to restrain the companies from employing the "Check-off" system, according to which the companies deducted assessments and dues from their employees and transmitted them to the Union. It was further sought in the injunction to restrain the defendants from doing any further act in furtherance of a combination and conspiracy alleged to exist among them, to restrain the United Mine Workers from doing anything to limit the plaintiff from employing non-union labour, or to establish a monopoly of labour, or to take any further steps to unionize the mines of the plaintiff, or to induce its employees and those of other mining companies to break their contracts, and to restrain the Union and operator of the central competitive field from further doing any act to lessen the ability of the plaintiff and other operators to continue their competition with

coal produced in the central competitive field.

The notice of the injunction was discussed at the convention of the United Mine Workers which was in session at the time in Indianapolis, and a resolution was passed empowering the Executive Board to fight the case. On October 29, the President of the United Mine Workers of America, Mr. John L. Lewis, declared in the Federal Court his refusal to cease efforts to unionize the Williamson coal field of West Virginia, whereupon the presiding Judge stated that he would issue an injunction on the following Monday to compel the cessation of these efforts, and indicated that the injunction would be binding on operators and union men throughout the country.

An injunction was also issued ordering the discontinuance by operators of the union, "Check-off." These injunctions were followed by a strike of about 25,000 union workers, on November 2, in over two hundred soft coal mines in Indiana. A general strike order which would have affected about 40,000 miners in that field was delayed pending actual stoppage of the "Check-off," by the operators. The injunction regarding the "Check-off" was subsequently suspended by the Federal Court of Appeals at Chicago.

FURTHER RECOMMENDATIONS OF UNITED STATES UNEMPLOYMENT CONFERENCE

A PRELIMINARY account of the recent unemployment conference called by the President of the United States, together with a summary of the recommendations adopted for an emergency unemployment programme, appeared in the October issue of the *LABOUR GAZETTE*. On October 17 the Conference adopted further recommendations embodied in reports of committees dealing with the permanent recovery of employment. The more important of these reports and recommendations are summarized below.

General Recommendations for Permanent Recovery of Unemployment

The Conference presented the following summary "of the more important matters that require constructive and immediate settlement if recovery in business and permanent employment are to be more expeditiously accomplished":

1. Readjustment of railroad rates to a firm basis of the relative value of commodities with special consideration of the rates upon primary commodities, at the same time safeguarding the financial stability of the railways.

2. Speedy completion of the tax bill with its contemplated reduction of taxes, in order that business now held back pending definite determination may proceed.

3. Definite statement of tariff legislation in order that business may determine its future conduct and policies.

4. Settlement of the financial relationships between the government and the railways, having in mind the immediate necessity for increased maintenance and betterments, making effective increased railway employment and stimulation of general employment in order that the railways may be prepared for enlarged business as it comes.

5. Limitation of world armament and consequent increase of tranquility and further decrease of the tax burden not only of the United States but of other countries.

6. Steps looking to the minimizing of fluctuation in exchange because recovery from the great slump in exports (due to the economic

situation in Europe) cannot make substantial progress so long as extravagant daily fluctuations continue in foreign exchange, for no merchant can determine the delivery because of no international shipment.

7. Definite programs of action that will lead to elimination of waste and more regular employment in seasonal and intermittent industries, notably in the coal industry, in order that the drain upon capital may be lessened and the annual income of workers may be increased.

8. In the field of all the different industries and occupations the rapidity of recovery will depend upon the speed of the proportionate adjustment of the inequalities in deflation. [A table with explanatory paragraph is here omitted.]

If the buying power of the different elements of the community is to be restored, then these levels must reach nearer a relative plane. For example, the farmer cannot resume his full power and thus give increased employment to the other industries until either his prices increase or more of the other products and services come into fair balance with his commodities and, therefore, the reach of his income.

UNEMPLOYMENT AND BUSINESS CYCLES.

The following is the recommendation, in part, of the Conference on the necessity of exhaustive investigation into the causes and remedies of periodic business depressions:

The business cycle is marked by peak periods of boom between valleys of depression and unemployment. The peak periods of boom are times of speculation, over-expansion, extravagance in living, relaxation in effort, wasteful expenditure in industry and commerce, with consequent destruction of capital. The valleys are marked by business stagnation, unemployment, and suffering. Both of these extremes are vicious, and the vices of the one beget the vices of the other. It is the wastes, the miscalculations and the mal-adjustments grown rampant during booms that make inevitable the painful process of liquidation. The most hopeful way to check the losses and misery of depression is therefore to check the feverish extremes of "prosperity." The best time to act is at a fairly early stage in the growth of the boom. . . .

The ebb and flow in the demand for consumable goods may not be subject to direct control; but on the other hand, it should be possible in some measure to control the expansion of the national and international demand. If all branches of

our public works and the construction work of our public utilities—the railways, the telephones, etc.—could systematically put aside financial reserves to be provided in times of prosperity for the deliberate purpose of improvement and expansion in times of depressions, we would not only greatly decrease the depth of depressions, but we would at the same time diminish the height of booms. We would in fact abolish acute unemployment and wasteful extravagance. For a rough calculation indicates that if we maintained a reserve of but 10 per cent of our average annual construction for this purpose we could almost iron out the fluctuations in employment.

Nor is this plan financially impracticable. Under it our plant and equipment would be built in times of lower costs than is now the case when the contractor competes with consumable goods in overbidding for both material and labour. . . .

In order to guide such a policy it is fundamental that an accurate statistical service be organized for determining the volume of production of stocks and consumption of commodities, and the volume of construction in progress through the nation, and an accurate return of the actual and not theoretical unemployment. These services are now partially carried on in the different government departments.

Such statistical service would in itself contribute to minimizing the peaks and valleys in the economic curve. The same warnings that would enable intelligent action on the part of public authorities and those who control large enterprises in guidance as to the periods in which construction should be deferred or should be initiated would also serve as a warning to the commercial public and would tend in themselves to effect the ends desired. As a first step in such a program, statistical services adequate to this purpose should be immediately authorized and carried out by the Federal Government.

REPORT ON EMPLOYMENT AGENCIES.

The Committee on Employment Agencies and Registration found that "a permanent system of employment offices for bringing workers and jobs together with the quickest dispatch is necessary both in times of depression and prosperity." The Committee concluded its report as follows:

The Committee on Employment Agencies and Registration is strongly of the opinion that the work of the Unemployment Conference can and should be greatly aided in its work by the U. S. Employment Service. It finds, however, that the Employment Service is crippled by lack of funds. It therefore urges that Congress be asked to appropriate \$400,000 to enable the U. S. Employment Service to operate in the interstate field by:

(1) Co-operation with the Emergency Employment Agencies erected by the State's municipalities.

(2) Informing states in which there is scarcity of labour of the situation in states where there is surplus of labour of the kinds desired.

(3) Securing and compiling information on employment opportunities throughout the country.

REPORT ON UNEMPLOYMENT STATISTICS.

The Committee on Unemployment Statistics made the following recommendations:

1. That the present practice of the Bureau of Labour Statistics of collecting from manufacturing concerns as of the fifteenth of each month data concerning the number of employees on payrolls and the amount of their earnings and of publishing monthly indices of the changes therein be extended to cover Transportation, Trade and Mining and Quarrying.

2. That in getting the data concerning the state of employment in Mining and Quarrying the Bureau of Labour Statistics collaborate with the U. S. Geological Survey.

3. That in getting data concerning the state of employment in Railroad Transportation, the Bureau of Labour Statistics collaborate with the Interstate Commerce Commission.

4. That where competent, reliable, State bureaus of labour statistics exist or become established, like the Massachusetts and New York bureaus, the Bureau of Labour Statistics collect through such bureaus within such States, instead of collecting directly from the establishments. . . .

The first step in meeting the emergency of unemployment intelligently is to know its extent and character. Yet this conference finds itself without the data even for an accurate estimate of the number out of work. Nor is this the first occasion when public conferences have been embarrassed by such a lack of necessary facts.

Special surveys such as those made by the U. S. Employment Service in January and again in September, 1921, are unsatisfactory for several reasons: (1) By virtue of their very character they cannot be carried on at monthly intervals, whereas there is need for a monthly measurement of the state of employment; (2) they take no account of the unemployment that takes the form of part-time employment, a form that is important in every depression and in every slack season and is being more and more extensively adopted as a policy at such times; (3) inspection of the returns reveals a large amount of reporting over the telephone and, as evidenced in the reporting of round numbers, in some cases of very round numbers, of reporting from vague and unverified memory, so that the

results are open to the suspicion that they contain a large element of impressionism.

Unemployment indices based on a regular monthly comparison of the number of employees and their earnings as shown by the payrolls of identical establishments in a mailing list that is large enough and well enough distributed among the various industries, among large, small and intermediate establishments, and geographically to constitute a fair sample are more dependable and satisfactory. Even these statistics are gathered by only two or three states.

REPORT ON FOREIGN TRADE.

The Committee on Foreign Trade reported as follows:

The volume of goods exported from the United States has been estimated to be roughly about 10 per cent of the nation's production. . . .

A small surplus of production over demand for consumption fixes the price of the entire amount produced. Therefore the problem before the country is to at least maintain the existing volume of its export trade even though the volume cannot for the moment be increased. The country's production being 10 per cent in excess of domestic requirement, this surplus must either be marketed abroad or reduction of prices will result and cause a corresponding reduction in the amount produced and result in further unemployment.

Trade ordinarily involves two major risks: First, that the value of goods purchased may decline between the time of purchase and the time of resale; Second, that the purchaser on credit may be unable to pay for goods purchased.

A third risk is now introduced into the export trade (as distinguished from domestic trade) by reason of the violent fluctuation of foreign currencies measured in dollars. In the case of raw materials, food, etc., essentially required by foreign countries, the effort of the American seller is to place the entire risk of exchange fluctuation upon the foreign buyer. The risk of exchange loss has, however, become so grave and is increasing so rapidly as to exert a strong restraining influence upon foreign buyers of American products even of these necessities. The risk is increased rather than diminished when goods are sold on credit. It introduces an additional risk as to the goodness of foreign credits.

The causes which now underlie these fluctuations in the values of foreign currencies are fundamental and must be dealt with fundamentally rather than superficially before the risks can be minimized and ultimately eliminated. They are: First, the unbalanced budgets of many foreign governments which result in constant increases in currencies, both note issues and bank deposits; second, the unregulated demands of the German Government for foreign currencies in order to complete reparation payments.

A third cause would arise if great care is not used in handling payment of principal and interest on debts owing to the Government of the United States.

It will be observed that these present and possible future fundamental causes of disturbance in exchange are largely political in character and will require governmental treatment. While these causes, because of their character and magnitude require such governmental treatment, we must recognize them also as grave economic problems, requiring the best business experience and ability in their solution. The citizens of the United States cannot assume the risks and responsibilities involved in dealing with these matters, nor have they the power to deal with them without the support of their Government.

The following suggestions appear to the Conference to reach the heart of the difficulty:

1. The approaching Conference for Limitation of Armament should result in bringing about a reduction in the military burdens and consequently the budgets of nations which are now maintaining excessive military establishments, and will be a long step toward arresting constantly increasing inflation, increasing depreciation and extreme fluctuations of the various foreign currencies.

2. The United States should be effective in the deliberations and decisions of the Reparations Commission and other agencies so that its influence may be exerted toward a reasonable control of the present unregulated payment of reparations by Germany.

3. Authority should immediately be granted by Congress to enable the Administration to deal with the funding of foreign debts owing to the United States Government in such a way as to avoid injury to the country's foreign trade and our employment.

In conclusion, the Conference points out that broad questions of policy such as national shipping, tariff, and taxes will have important effects upon movement of our commodities to oversea markets.

REPORT ON CONSTRUCTION INDUSTRIES.

The conference estimated that more than 2,000,000 people could be employed if construction were resumed. It made the following recommendations:

It is recognized that the construction industry is a key industry, that there is a vast amount of construction needed and that this construction work would afford employment to a large number of men directly and indirectly and would result in the creation of permanent and useful wealth translating labour into earning capital.

To meet the present unemployment emergency and to make renewed activities in the construction field possible, the conference does not require special concessions to the industry. But it does

require a complete and prompt removal of unnecessary handicaps, restrictions and limitations, both direct and indirect, these including priorities, credit, freight rates, undue cost in relation to labour and materials, wasteful building codes and the like. . . It is, therefore, recommended that Secretary Hoover. . . appoint a committee selected from the various elements interested in construction such as financiers, labour engineers, architects, contractors, material manufacturers and others, to be known as the Committee on Construction Development, which will be charged with the responsibility of preparing and making effective suggestions for:

(a) Co-operation with governors and mayors in the several states in carrying on community conference on construction, to the end that local restrictions may be eliminated, abuses done away with and proper local attention given to the efficient planning and development of construction work, as it is only through such community conference that the local situation can be properly appraised.

(b) Prompt removal of unnecessary or inequitable limitations and restrictions which have retarded real construction activity.

REPORT ON PERMANENT MEASURES FOR SHIPPING.

The report of the committee on Shipping and Shipbuilding contains the following proposals:

1. Decision on Jones Act. Prompt action on the enforcement or amendment of the Jones Act in order to extend aid to shipping and to relieve it from its present uncertainty.

2. Disposal of Shipping Board's ships. This committee confirms its belief that the expressed policy of the federal government to retire from the ownership and operation of ships should be made effective at the earliest practicable date.

3. A marine code and unified administration. A single organic marine law adequately administered by one federal department instead of by many as at present would facilitate close co-operation with shipping interests and would go far toward alleviating present legislative and administrative burdens from shipping.

4. Coastwise laws. It is the belief of this committee that the present coastwise shipping laws should be faithfully enforced and that we can with advantage at this time extend them to include all of our insular possessions.

5. American goods in American ships. It is only logical that American ships should be added to the extent that they be given successful carriage and federal controlled products and that every possible help and encouragement be extended to American ships carrying the mail.

REPORT ON AGRICULTURE.

The committee on Agriculture recommended that:

1. All prices and all wages should be so adjusted that a normal reasonable ratio will be established between the incomes of farmers, labourers, manufacturers and merchants in order that the purchasing power of the farmer may be restored, thus hastening the resumption of normal trade, manufacturing and the employment of labour.

2. Railroad freight rates on commodities transported to and from the farm must be substantially reduced without delay.

3. Prices of materials, farm implements and supplies must be adjusted to the price level of farm products.

4. The aggregate of charges between the farmer and the food consumer is excessive and ways should be found to reduce them.

5. Better graded facilities must be provided for agriculture.

6. Exports for agricultural products should be stimulated.

7. Any tariff legislation which may be enacted should develop and maintain a just economic balance between agriculture and other industries, and treat fairly both producers and consumers.

REPORT ON MINING.

The conference recommended that:

as the preferential car supply was permitted to exert its evil influence in 1920 with most disastrous results. . . the Esch-Cummins Act be hereafter rigidly enforced to the end that there shall be no preferential use or assignment of railroad cars in the coal industry.

As an aid to the prevention of unemployment, the conference recommended that the Committee of Railway Executives be asked gradually to accumulate and maintain along other lines a quantity of bituminous coal sufficient to take care of their requirements for a period of at least five months. The conference urged that Congress authorize the payment of all monies now owing the railroads by the federal government.

In regard to the metal mining industry the conference reported that international conditions and the slackness in the building trade were responsible for unemployment.

JUVENILE EMPLOYMENT SERVICE IN CANADA AND OTHER COUNTRIES

DURING recent years special attention has been centred upon the problems surrounding the entrance, training and absorption in industry of juvenile workers. While in many European countries some attention had been given to these questions prior to the war, the entrance of increasing numbers of junior workers into industry during the war fixed public attention upon the necessity of direction and supervision of junior workers and gave strength to this important movement.

Canada

In January, 1920, Mr. J. M. Wyatt, formerly chief probation officer of the Juvenile Court at Toronto, was appointed to the staff of the Employment Service of Canada to assist in the organization and the development of special offices dealing with junior employment. The principal development in Canada of the work of juvenile employment service is in Winnipeg, where a committee undertook a survey of junior employment during July and August, 1920. Over 5,000 girls and boys under eighteen years of age were found by this survey to be at work. The committee then urged upon the provincial government the establishment of a junior section of the Employment Service of Canada. The government acceded to this request and an office was opened in Winnipeg on December 10, 1920. During the first eight months of its operation 2,157 applicants registered at the office and 1,254 placements were made, covering 452 boys and 354 girls. Of the applicants, 151 were seeking temporary employment during the summer holidays. Close contact is being established between the junior employment office and the public and high schools in order that those in charge of the office may benefit by available information in possession of the school authorities with

regard to pupils leaving to seek employment.

Great Britain

In Great Britain special arrangements for junior workers were made with the opening of the first labour exchanges in 1910, and conditions were laid down for the establishment of special advisory committees for junior employment. The Education (Choice of Employment) Act, 1910, gave local educational authorities power to establish committees and exchanges for a similar purpose. In this way two different types of committees discharging similar functions in different areas came into existence. Since that time 133 juvenile advisory committees have been appointed by the Ministry of Labour and 98 committees and juvenile exchanges have been set up under the Education (Choice of Employment) Act. These committees and exchanges within a period of nine months made 82,829 placements among girls and boys under eighteen years of age. In a statement prepared by the Ministry of Labour the following are given as the principal duties of juvenile employment committees: (1) To give the best possible advice and assistance to boys and girls entering employment and to emphasize the importance of their following a definite system of training; (2) To exercise a friendly supervision over them during the first years of their industrial life; (3) to study local industrial conditions with the object of effecting an improvement where this is possible. The following results as shown by the report of the Ministry of Labour have been accomplished through the initiative of these committees:

Southampton — Decasualization of boy labour at the docks.

Bolton — Through co-operation with the Engineering Employers' Association, improvements were suggested and adopted in the en-

gineering trades. At the same place an arrangement was made with a large co-operative milk distributing company where the boys had no prospect of permanent employment when they reached a certain age, whereby these boys should compete at examinations for permanent jobs in other departments.

Lincoln — An arrangement was made with the engineering firms whereby apprentices who were laid off on account of trade depression should be reinstated before any new apprentices were engaged.

Bristol — The number of apprentices in the building trades was doubled in one year through co-operation with the Building Trades Council and the establishment of a Building School. Similar schemes are operating in the watch and clock trade, the National Association of Goldsmiths suggesting that the scheme be adopted nationally.

Birmingham — Dining rooms where working boys and girls can get a mid-day meal at reasonable prices and in proper surroundings have been established.

London—Three years' apprenticeship in hotel kitchens with part time technical school training has been inaugurated. Special travelling facilities for all junior workers up to 18 years were extended to students and apprentices and articled clerks whose wages did not exceed a certain amount.

In view of the long experience revealed by this summary of work accomplished in England, it is important to draw attention to the following extract from the Report of the Committee of Enquiry into the British Employment Exchanges, of which the Right Honourable G. N. Barnes, M. P., was chairman :

In the course of evidence and of our enquiries the special work done at and in connection with the Exchanges in relation to the employment of boys and girls has been brought prominently before us. This work, which consists in helping boys and girls up to the age of 18 to find suitable employment, is carried on under Juvenile Employment Committees formed by the Ministry of Labour under the Labour Exchanges Act, 1909, or under Choice of Employment Committees formed by the Local Education Authorities under the Choice of Employment Act, 1910. For the official working of a committee of either kind a close and cordial co-operation between the Employment Exchange and the Educational Authority is essential. We believe that in the main such co-operation has been secured. The general position, however, whereby two Departments of State are responsible for initiating action in

respect of the same problem is not satisfactory, and we understand that in certain areas some difficulty has resulted.

Our Terms of Reference confine us to examining the work and advising as to the future of Employment Exchanges. We have, therefore, taken the view that we were not justified in attempting to make a detailed examination of what has been done in relation to juvenile employment by the Local Educational Committees. We feel bound, however, to express our conviction that the present situation should, with as short a delay as possible, be altered by the recognition of a single Government Department as primarily responsible for this subject in all areas.

A memorandum prepared by the Ministry of Labour on Juvenile Employment Committees gives the three following reasons for the centralization of all matters relating to junior employment, as opposed to the dual control criticized so strongly by the Committee of Enquiry: (1) The problems surrounding junior workers and the industrial adult are tied up together, and the Ministry of Labour cannot agree to disassociate the one from the other. (2) Certain negotiations and enquiries relative to the prospect of the junior worker must be centrally conducted, and this involves close and frequent contact with representative bodies of employers and trade unions, and this can more appropriately be undertaken by the Ministry of Labour than by a local board of education or sub-committee thereof. (3) The area of a local education authority is rarely co-extensive with an industrial area.

South Africa

In South Africa a number of Juvenile Affairs Boards have been in operation for some time at various centres to deal with the problems surrounding juvenile employment. A bill has now been prepared to come before the present session of the South African Parliament placing these boards on a national basis with definite powers and functions. The Juvenile Affairs Boards Bill provides for the establishment of Juvenile Affairs Boards and makes it compulsory for principals of schools to notify these

Boards of all pupils who are about to leave school, and for all employers to notify the Boards of engagements and discharges of juveniles. The powers and duties of the Boards are to (a) Compile and maintain a register of all young people within their area with the help of school principals and employers as provided; (b) Conduct an employment bureau for juveniles; (c) Make provisions for affording all juveniles and their parents assistance in regard to the choice of suitable employment by means of the collection and communication of information and furnishing of advice; (d) Take such steps as may be approved by the Minister for exercising a continuing supervision or after-school care over all juveniles within the area under its jurisdiction; (e) Report on any matters concerning the employment, training, or welfare of juveniles.

United States

Vocational guidance and placement work in the United States has been a matter of vital interest during recent years. Educational agencies, Public Employment Offices and the Federal Government have each had noteworthy developments along these lines, while in the early stages, philanthropic agencies and some business organizations did pioneer work. Important school placement bureaus, i. e. bureaus operated by school boards, have been located at Boston, Chicago, Cincinnati, Minneapolis, New York and Philadelphia. Cincinnati has a Research Department where mental and physical tests are made and recorded. The following states have enacted legislation relative to junior placement work by Public Employment Offices: Indiana, Kansas, Missouri, New York, Pennsylvania. After the war the Junior Section of the United States Employment Service was organized with Mrs. Anna Y. Reed, Assistant to the Director, in charge. The purpose of this important development upon a national basis is summarized in the following general instructions to junior counselors:

(a) To influence boys and girls to remain in school as long as possible.

(b) To give aid toward the right start for those who have had to leave school to go to work.

(c) To arouse the ambitions of boys and girls to fit themselves for definite life careers.

(d) To direct youths who are employed toward some form of trade, technical or business school for special training.

(e) To promote the needed opportunities for vocational education in the community.

(f) To follow up all applicants in their training and at their work to see that they have the best available advantages of study and labour. This process should continue until they are well established in their vocational plans.

Among cities which have been organized under the United States Employment Service are the following:—Providence, New York, Philadelphia, Pittsburg, Cleveland, South Bend, Milwaukee, St. Paul.

Other Countries

Many of the German Labour Bureaus do special work along the lines of vocational guidance and placement of junior workers. In some cases educational authorities and trade organizations are in thorough co-operation with the Municipal Employment Office. Such a system was founded in Munich as early as 1902 and the Bavarian Government issued instructions in 1903 for co-operation between the educational authorities and municipal bureaus in junior employment work. Under the system which was inaugurated at Strassburg before the war, there are conferences with parents, and the municipal health officer examines boys and girls leaving school with regard to their suitability for various lines of work. A somewhat similar system was founded at Mulhausen and Colmar, and conferences with parents of prospective workers are found in many other German towns. Frankfurt and Berlin Labour Bureaus give in-

formation with regard to various industries by means of motion picture lectures. In Austria, subsequent to a Government order of 1907, employment offices collect information from the schools regarding pupils leaving, and ascertain through employers' organizations lists of available vacancies. In Belgium, special care is given to the question of apprenticeship through apprenticeship offices which are subsidized and controlled by public authority. A somewhat similar

system exists in France, and a recent circular of the French Ministry of Labour recommends that special sections for placing young persons in employment be opened in connection with Employment Exchanges. In the Netherlands, detailed information regarding various occupations is provided in pamphlet form. Throughout Sweden employment offices and schools co-operate on the matter of work selection. The same is true for Switzerland.

WORKMEN'S COMPENSATION IN BRITISH COLUMBIA IN 1920

THE fourth annual report of the Workmen's Compensation Board of British Columbia covers the operations of the calendar year 1920. The Workmen's Compensation Act, which was passed in 1916 and came into force on January 1, 1917, covers all employees excepting outworkers, casual workers, travelling salesmen, clerical workers not exposed to industrial hazards, and members of an employer's family.

The benefits allowed in compensation are now as follows: burial allowance, \$35; monthly payments to widow, \$35, with allowance for each child under 16 of \$7.50, the maximum benefits to widow and children being \$65 per month; allowance for permanent total disability is 55 per cent of pay; and for permanent partial disability, 55 per cent of the difference in the worker's earnings before and since the accident; for temporary total disability, 55 per cent of former wages, with a minimum of \$5; and for temporary partial disability 55 per cent of difference in earning power.

The business of the Board showed a considerable increase during the year, notwithstanding some decline in industrial activity during the last three months, and a net increase of 548 was recorded in the list of assessed employers. It is estimated that 113,000 workmen were covered by the Act, the total annual payroll amounting to \$132,000,000. A larger number of men were

employed in hazardous occupations than in preceding years, particularly in lumbering. The year 1920 was the first full year in which returned soldiers were re-establishing themselves, in new occupations in many cases, and a number of the accidents during the year were due to this circumstance, though not to the extent that might have been expected. The report points out that "the campaign for more efficient first-aid service and the importance of prompt medical attention has decreased the distressing effects arising from neglected industries which so often in other days led to blood-poisoning and to serious permanent partial disability. The importance of first-aid and medical service and its proper use is becoming more generally appreciated by both workmen and employers." Today, all operations having over 50 workmen have safety committees, and more machines are safe-guarded than ever before. On September 1, 1920, the amended First-Aid regulations came into force and were made compulsory. During the year, the sum of \$397,451 was disbursed for medical and hospital treatment, transportation, apparatus and artificial limbs for injured workmen.

The daily average of accidents reported during the year was 70, involving 1,742 claims each month. The total amount paid on claims during the year was \$1,711,637, or 23 per cent more than in 1919. This increase was mainly due

to the increased number of workers within the scope of the Act and to the increase in widows' and children's allowances from \$20 and \$5 to \$35 and \$7.50 respectively.

During the year, 20,905 accidents were reported, 216 of these (including 11 deaths which occurred late in 1919) being fatal. This number does not include several thousand trivial accidents in which first aid service was rendered, but no time was lost. The number of deaths was less than in any year since the Act came into force, the average for the four years being 237. Arising out of the 950 deaths which were reported during four years, pensions were granted to dependants in 440 cases. At the present time, 1,326 persons are benefiting by monthly pension cheques resulting from the fatal accidents which occurred since the Act came into operation. During the same period 34 widows of deceased workmen remarried, receiving in settlement of their claims the statutory allowance of \$480; pensions, however, in respect to the children of the first marriage continue until such children reach the age of 16 years.

Where pensions are awarded to workers or their dependants the present value of such pensions for their expected term is placed in reserve and invested in Government securities, as required by the "Trustee Act." After four years operation the reserves amount to \$1,715,854, including an item of \$15,000 per year (now amounting to \$60,000) which is set aside as a protection against possible catastrophe.

Collections by the Board during 1920 amounted to \$2,234,465, this sum including \$1,766,879 received from employers (assessment and interest); \$169,884 contributed by employers for medical aid; and \$229,912 for medical aid, paid by workmen as dues at one cent a day during the year.

The number of claims "finalled" during the year, and the amounts paid in compensation are shown as follows:—

	No. of Claims	Amount of Compensation paid
Temporary total disabilities.....	11,166	\$716,482
Permanent partial disabilities..... (cash payments)	529	157,249
Permanent partial disabilities..... (monthly pensions)	176	209,763 (reserve)
Fatal accidents... (pension awards)	92	473,293 (reserve)
Fatal accidents... (burial awards)	162	11,337

Of the non-fatal accidents 7,844 involved a time-loss of only 3 days or less. The average duration of disability was 30.3 days. The number of rejected claims was less than 2.5 per cent of the total claims.

An analysis of 11,166 temporary total disability accidents shows that the industries chargeable with the largest number of accidents were as follows:—

Lumbering (including logging, river driving, etc.).....	2400	accidents
Sawmills, (including yards and delivery).....	1462	"
Coal mining.....	1039	"
Steam railways (construction and operation).....	890	"
Metal mining.....	763	"
Steel shipbuilding.....	575	"
Shingle mills.....	396	"
Pulp and paper manufacturing..	282	"
Stevedoring.....	250	"
Building construction.....	195	"
Municipal employment.....	165	"
Woodworking plants, planing mills.....	139	"
Logging railways (operation, maintenance, construction)...	137	"
Fishing and canning.....	125	"

The total wage loss represented by 11,166 temporary total disability cases was \$1,545,956.

The report calls attention to the low annual cost of the administration of the compensation funds, which amounted to 4.08 per cent of the amount collected from employers. Thus of every \$100.00

collected from the employer \$95.92 goes directly to the workmen or their dependants without any expense to them whatever.

The Board conclude their report with a strong recommendation for the passing of a health insurance measure, which would take the entire cost of sickness and distribute it equitably over the factors

which cause it and which suffer by it. "Attention to the health of the workman," the Board state, "will mean the prolongation of his life, and especially of its earning period. Fewer workmen will be thrown on the scrap-heap in their forties, with all the tragic consequences involved to their families as well as to themselves."

GROWTH OF TRADE UNIONISM SINCE 1913

A COMPREHENSIVE report on the growth of trade unionism since 1913 is published in the July-August issue of the *International Labour Review*. The statistics given are based on returns made by trade unions to their governments, or published in trade union or other periodicals. The report covers statistics supplied for thirty different countries and refers especially to the years 1913, 1919 and 1920, figures for the years 1914 to 1918 not being considered of sufficient value on account of the disorganization of trade unionism during the war. It is pointed out that the accuracy and fullness of the returns from the different countries vary considerably and hence it has been necessary in some cases to be content with estimates of the members of trade unions. All such-estimated figures are specially indicated in the general table below. In the 1920 column of this table nine countries are indicated for which no statistics were available; the figures for 1919 have therefore been used, as it was decided that no considerable change in any of them would be likely.

The great increase in membership since 1913 may, it is stated, be partly attributed to the fact that trade union statistics are becoming more complete each year and thus reflect the real position more and more clearly. Allowance must also be made for a general increase in population, which plays a part in the increase of trade union membership — probably about 6 per cent during the period.

The article also contains a review of trade union membership in each of the countries mentioned in the table, and in most cases describes the various forms of trade union organization which have been established.

INDUSTRIAL HYGIENE IN TORONTO

Report by Committee of Honorary Advisory Council for Scientific and Industrial Research

THE committee on Industrial Fatigue, which was established in the spring of 1919 by the Honorary Advisory Council for Scientific and Industrial Research, recently issued a report entitled: "Survey of General Conditions of Industrial Hygiene in Toronto." (This constitutes the seventh report published by the Advisory Council.) The purpose of the committee was in the first place to consider to what extent fatigue is a factor in industry and calls for scientific investigation, and in the second place to establish means for research, if such action should seem necessary. The committee was composed of a number of experts in physiology and psychology from various universities, a representative of the Trades and Labour Congress, one representative of women's organizations, and one manufacturer. Toronto was selected as a representative locality in which to investigate the general conditions of industrial hygiene. Seventy-six plants, including all the larger plants in the community, were personally visited by the investigators. One-third of the total employees in the plants visited were women. No account was taken of accident hazard, since extensive work in this direction is being done by the Accident Prevention Association authorized under the Workmen's Compensation Act of Ontario, and by the Ontario Safety League.

The report comments upon the lack of industrial physicians in Toronto, for though a few doctors devote part of their time to industrial work, they are with two or three exceptions concerned rather with the treatment of disease than its prevention.

The attitude of industry in regard to specific provision for industrial hygiene was found to be unsatisfactory. While employers generally recognize the value

of good working conditions, they fail for the most part to realize that such conditions are governed by definite physiological laws and require definition by expert investigators. A lack of clear purpose is evident at many plants; for example, canteens and lighting systems are installed or welfare workers appointed with a view to meeting hygienic requirements, while such important matters as the type of seat, air space and window arrangements, are overlooked. Manufacturers appear vaguely conscious of the benefits of industrial hygiene as "progressive," and possibly productive of dividends, or likely to attract workers to their plants. They are disposed, however, to regard it merely from its negative side as a means of preventing discontent, rather than as a positive means toward industrial prosperity. Managers often prefer to withhold their support until the advantages to be derived from it become more clearly defined and established; moreover they distrust statistics and the efficiency movement generally.

More significant is the assertion often made by managers that it is useless to improve conditions in the plant while conditions in the homes of the workers remain unsanitary. Such a statement raises the question whether the employees are receiving a "living wage" which would enable them to maintain satisfactory standards of food, heating, etc., and whether the employer should not himself be responsible for setting a fairly high standard of living. Managers, however, are not free agents in regard to provisions for their employees which involve the expenditure of money, being required by their directors to justify such outlay by increased efficiency or immediate profit. At the same time they have often to meet opposition from the workers themselves, who object that the

money spent on plant improvements should be put into increased wages, and are mostly suspicious as to the motives lying behind plant services.

But although conditions are generally backward the committee found a growing recognition of the value of industrial hygiene, and anticipate that certain progressive employers will become a nucleus for a more general adoption of the principles of the science. During the year the Industrial Hygiene Division of the Provincial Board of Health has been established, and this body should be of assistance to firms already interested in hygiene.

Hours of Work. In most of the plants visited the 48-hour week prevailed. No time allowance was anywhere made on account of conditions hazardous to health. Apart from bakeshops and dairies night work was rare; at one plant where a night shift was worked, attendance was improved by the opening of a night cafeteria. No instance was observed where day workers or piece workers received holidays with pay.

Medical Service in Industry. Only one plant was found to have a full-time physician, but many had physicians or surgeons on call, mainly for accidents. Some have no systematic arrangement, but in cases of accident merely send to the nearest physician, regardless of his surgical qualifications. Twenty-four plants have nurses; eight of these have only one nurse for both dispensary and visiting, six have a dispensary nurse and one or more visiting nurses, and ten have a dispensary nurse only; in two of the latter, social workers, without nursing training, carry on visiting. One plant has a part-time dentist. Medical equipment varies as to the number of rooms provided for dispensary accommodation. Where one room only is provided and only one dispensary nurse is employed equipment seldom exceeds the requirements of the Workmen's Compensation Act of Ontario. (This Act requires that for all plants employing from 15 to 300 persons a first-aid kit shall be provided

in charge of "some suitable person." For plants having more than 300 persons a first-aid room with specified equipment shall be provided, to be in charge of some person who has taken a recognized course in first-aid). Some plants, however, have provided much equipment beyond the requirements of law. An initial physical examination is held at a few plants, but no plant was found where such examinations are held periodically or on change of occupation within the plant. Two or three firms employing women allow them a rest period during indisposition.

Sanitation. Ventilation was found to be not seriously defective, except in the smaller plants of old-type construction, and in buildings, common in Toronto, which have been converted from other uses. The same condition is found in regard to lighting, both natural and artificial. The advantages of clean windows, however, are not enough appreciated. Lavatory accommodation shows some improvement in new plants, but in many the conditions are deplorable, partly owing to the habits of a minority of the employees, and in comparatively few are the recommended standards for number and construction complied with. In dirty occupations, where baths are provided, these are seldom used, mainly because of inadequate dressing room accommodation. Varied conditions were found regarding disposal of waste, but extremely filthy conditions exist in a few plants.

Fatigue. A general slackness was reported among the workers in the various factories visited, a high proportion of absence on account of minor disabilities being noted. This slackness might, as some managers claimed, result from the high wages in force when the investigations were made, or on the other hand it might be due to fatigue caused by too long or strenuous work. In either case, no attempt was recorded to adjust the hours of work to the capacity of the workers. Only one firm in Toronto was found to follow any system of job an-

alysis. Compulsory medical examinations are not held except by public utility companies, whose motive is rather to protect the public than the employee.

Many obvious errors in the posture of workers were observed; for instance, women stand at cardboard cutting machines, as do also lathe workers; seats in a boot and shoe factory were badly designed; cornering machines in paper box factories required modification. Other examples are given to prove that certain small changes would greatly diminish the workers' fatigue. Among the preventive measures observed in practice, one firm provided glasses for girls doing fine work. Some plants allowed rest period of five minutes every hour, or ten minutes in the forenoon and afternoon, with afternoon tea or physical drill in the latter interval.

Occupational diseases. The investigators found that no problem in this connection exists in Toronto, this opinion agreeing with the experience of the Workmen's Compensation Board. The following specific occupational diseases, however, were met with: chocolate eczema, zinc poisoning, and sepsis, developing in wounds received in the cutting-rooms of abattoirs. At many factories exhaust systems, more or less effective, are provided for the expulsion of dust, but in seven of the plants visited no attempt was made to remove dust. On the prevailing indifference to the question of industrial disease the report comments as follows: "It seems incredible that the position in Toronto should differ so widely from common experience in the States, where occupational disease is recognized as a general problem. This is evidenced by, among other things, the existence of special occupational disease sections in hospitals, fed from industrial clinics, and by the fact that 650 different types of such diseases have been identified."

Welfare. Many employers go beyond the requirements of the Factory and

Workshops' Act of Ontario in providing cafeterias and rest rooms, but dressing rooms are inadequate at the majority of plants.

Lost Time for Sickness. Investigation by the committee into the time lost in the various factories through sickness was limited almost entirely to the experience of benefit associations and trade unions. An attempt was made to secure direct information by means of record cards in the form used by the United States Public Health Service, but the necessary co-operation on the part of the employers could not be secured. Various methods are used by managements for verifying sickness, more or less efficient, but the figures so obtained do not truly represent sickness experience. Only a few plants employ a visiting nurse, the most trustworthy check upon sickness reports.

The sickness experience of a group of industries in Toronto, as shown by the records of benefit associations, is in general lower than the average experience as recorded by the Metropolitan Life Insurance Company's surveys, which was 6.9, and considerably lower than the estimate of the American Association for Labour Legislation for industrial workers in the United States, which was 8.5. The report contains charts showing the time loss from sickness among municipal and various industrial employees.

RECOMMENDATIONS.

The committee suggests as a means for gaining the confidence of industry that some specific piece of research should be conducted from which definite conclusions could be drawn from some concrete problem, such as output in its relation to speed or posture. Further investigation should also be made into the subject of occupational disease, with a view to formulating a statement as to the best preventive measures.

RAILWAY RE-ORGANIZATION IN GREAT BRITAIN

Railways Act, 1921, establishes Wages Boards and Joint Councils

THE British Railways Act, 1921, which became law in August, provides for the regulation of the railways on the expiration on August 14 of the period of the Government control.

The existing railway companies are divided by the Act into six groups.

For the fixing of railway charges a Railway Rates Tribunal is established, consisting normally of three members, namely, an experienced lawyer to act as chairman, and two others, one with commercial and the other with railway experience. Two other members may be added, at the discretion of the Minister of Transport, for the purpose of dealing with a particular case. These additional members are selected, one from a "railway panel" and one from a "general panel," consisting of 36 persons, 22 being nominated by the President of the Board of Trade to represent trading interests; 12 by the Ministry of Labour "after consultation with such bodies as he may consider most representative of the interests of labour and the passengers upon the railways"; and 2 by the Minister of Agriculture and Fisheries.

Wages Boards

The Central and National Wages Boards are reconstituted and will continue at least until January 1, 1924. All questions relating to rates of pay, hours of duty, etc., will, in default of agreement, be referred to the Central Wages Board, or, on appeal, to the National Wages Board.

The Central Wages Board is composed of 16 members, of whom 8 represent the railway companies and 8 the railway employees, the latter being appointed as follows: 4 by the National Union of Railwaymen, 2 by the Associated Society of Locomotive Engineers and Fire-

men, and 2 by the Railway Clerks' Association. This Central Board decides salaries, wages, hours and other conditions of service of employees, or any questions relating to these subjects which may be referred to it by any subordinate body.

The National Wages Board is composed of 16 members, of whom six represent the railway companies, six the railway employees, and four the users of railways, together with an independent chairman nominated by the Minister of Labour. Of the six labour representatives two are appointed by each of the three unions mentioned above, while the four representatives of the users are nominated respectively by the Parliamentary Committee of the Trade Union Congress, the Co-operative Union, the Association of British Chambers of Commerce, and the Federation of British Industries. The National Board decides all questions of pay and conditions which are referred to it by the Central Wages Board when that Board fails to agree. Strikes and lockouts are prohibited before the expiration of one month after the reference of the dispute to the National Board, which Board is required to publish the results of its investigation within 28 days from the date of reference.

"Whitley" Councils

The Act provides for the establishment, for each railway company affected, of one or more councils consisting of officers of the railway company and representatives of the employees. The constitution and functions of these Councils follow the lines laid down in the so-called "Whitley" Report, and may be further defined and regulated by a committee consisting of six representatives of the General Manager's Com-

mittee of the Railway Clearing House, and six representatives of the National Union of Railwaymen, the Associated Society of Locomotive Engineers and Firemen, and the Railway Clerks' Association.

Local Departmental Committees may be established at any railway station at which the number of regular employees in a department exceeds one hundred. These committees consider such matters as hours of work, holidays and conditions, or suggested improvements in methods of operation.

Sectional Councils of not more than five members are set up in each of the six groups into which the railways are divided. These councils consider general subjects affecting definite groups or grades of employees, each such grade having a fixed number of representatives on the Council.

One Railway Council is established for each railway, or group of railways. These Councils, and the Sectional Councils, will deal with the carrying out of agreements, and also with certain matters of administration.

THE RAILWAY LABOUR CRISIS IN THE UNITED STATES

THE series of controversies relative to wages and working conditions which had been occupying the attention of the United States Railroad Labour Board for some considerable time reached a crisis on October 15 due to the issuance of a strike order by the brotherhoods. The decision to strike was a result of a vote by the train service brotherhoods of trainmen, engineers, firemen and conductors and also by the switchmen's union. On October 27, the chairmen of these organizations unanimously decided to revoke the strike order, and, as a result, the strike did not occur.

The strike was declared, technically, because of the decision of the Railroad Labour Board authorizing a 12 per cent wage reduction, to be effective from July 1, 1921. The order to strike was issued after deliberation by the brotherhood chiefs on the result of the membership ballot, which was in favour of a strike. Press opinion in the United States seemed, however, to indicate that the more immediate cause which prompted the chairmen of the brotherhoods to ratify the strike vote was the announcement of the Association of Railway Executives (representing all the railroad companies of the United States) of its intention to seek another wage reduction of 10 per cent.

A brief review of the situation will be of interest. On December 28, 1917, the United States Government took over and operated, through the Director General of Railroads, all the railroads of the country. This control continued until March 1, 1920, when pursuant to the Transportation Act, 1920, the railroads reverted to their owners. On February 28, the Transportation Act (the Esch-Cummins Bill) became law and created what is known as the United States Railroad Labour Board. This Board consists of nine members in three groups of three each—the Public group, appointed by the President to safeguard the interests of the general public; the Labour group, appointed from a list nominated by the railway labour organizations; and the Managing group, appointed from a list submitted by the railway companies. The Board is authorized to deal, generally, with the wages and working conditions concerning the employees of the railways, and is given rather broad powers.

Previous to this Act, and during the period of Federal control, the Director General of Railroads entered into contracts with organizations of railway employees. These contracts were called "national agreements" and stipulated the wages and working conditions. These

national agreements automatically expired with the discontinuance of Federal control, but with the creation of the Railroad Labour Board the question of continuing the terms of these agreements was referred to that body. In July, 1920, the Railroad Labour Board increased the wages of railway employees 21 per cent, retroactive to May 1, 1920. In September, 1920, the Interstate Commerce Commission granted an increase in freight rates amounting to about 35 per cent.

* Then came the general industrial depression, and there was discussion on a wide scale of the respective interests of investors, shippers, labour and the general public.

The Railroad Labour Board dealt specially with the problem in its two chief aspects — wages and working conditions. In May, 1921, the Board authorized a wage reduction of about 12 per cent, effective July 1. The Interstate Commerce Commission did not, however, authorize any immediate attendant reduction in freight rates. The executives of the four train service brotherhoods and of the switchmen's union protested and decided to submit the matter to the membership in the way of a strike ballot. Voting commenced about the end of August, and the result, a decision to strike, was made known early in October.

As regards the modification or continuation of the working rules or national agreements, this problem became pressing when, in representations before the Board the Association of Railroad Executives apparently objected to the renewal or continuance of the national agreements, at any rate without modification, claiming that the working rules were piling up a prohibitive cost to the companies and would force them into bankruptcy. The Board, in February, 1921, declined to grant the application of the railway companies to end the national agreements, but, in April, it directed the unions and the railways to negotiate

working agreements to replace the national agreements, which were to terminate on July 1, 1921. The Board sought to assist negotiations, but the negotiations failed and the Board again postponed the date of termination of agreements so that, with the exception of a few minor cases, they are still in force.

The shop craft, six in number and affiliated with the American Federation of Labour, also conducted referenda on the wage reduction, but the employees in these crafts did not force the issue to a strike conclusion.

The decision to strike was reached during the two days' (October 14 and 15) assembly of the chairmen of the train service brotherhoods and the Switchmen's Union. During these same days, these officials met the committee of railway executives and heard their announcement of intention to seek another wage reduction. In that conference, the railwaymen's officials served formal verbal notice that the railwaymen would strike on October 30. The strike was declared against the last wage reduction of July 1, 1921, and not against any pending reduction, though some confusion appears to have existed on these points.

On October 15, the President of the United States convened the public group of the Railroad Labour Board in the hope that this non-partisan body would effect an adjustment. This group recommended that the railways immediately reduce their freight rates in proportion to the July wage cut and withdraw for the present their request for further wage reductions, and that the unions withdraw their strike order pending a wage settlement later.

After several conferences, the Railroad Labour Board, supported by Federal authority, decided on drastic measures to avert an interruption of transportation. On October 21, the Board formally announced that it had assumed jurisdiction in the crisis and ordered the

employees not to strike, pending a joint conference of railroad executives and union officials. The representatives of both the carriers and the unions announced that they would comply with the order to appear before the Board. The order, however, was subject of considerable comment as it was the first instance where the Board had so decisively expressed an authority which many companies and union officials had maintained it did not possess. The clause on which the Board based its action is as follows:

"The Labour Board, in case it has reason to believe that any decision of the Labour Board or of an adjustment board is violated by any carrier or employee or subordinate official or organization thereof, may upon its own motion, after due notice and hearing to all persons directly interested in such violations,

determine whether in its opinion such violation has occurred and make public its decision in such manner as it may determined."

The Board's interpretation of the impending strike was that it would constitute a violation of the Transportation Act, as it would be in rebellion against Decision No. 147, which authorized the wage reduction of July 1.

On October 27, at a joint meeting of the leaders of conductors, engineers, firemen, trainmen and switchmen, it was unanimously decided that the strike be declared "not effective."

An order issued by the Railroad Labour Board called for a further conference, and while nothing was mentioned in this order regarding the basis for further negotiations, it is assumed that this basis consists of the proposal of the public body as indicated above.

RECENT LABOUR LEGISLATION FOR THE YUKON

THE Council of the Yukon at its last session made enactments dealing with working hours, payment of wages and liability of employers for taxes of employees.

An ordinance regulating hours of labour in quartz and lode mining provides that no person shall be employed underground in any shaft or tunnel or upon a mineral claim for more than eight hours in any twenty-four hours except for such longer period as may be necessary during a change of shifts. In cases of emergency longer hours may be permitted, and the owner, agent, manager or person acting on his behalf is to be "the sole judge of what constitutes an emergency within the meaning of this section."

An ordinance to provide for a monthly pay-day in certain cases directs that all wages earned during any month by persons employed by any company in any mining operation or in any other office or branch of the company's operations shall be paid not later than the fifteenth day of the following month.

An employee who is discharged or leaves his employment at any time other than the ordinary and regular time of termination of his employment must be paid on leaving such wages as are then due him.

The bachelors' tax ordinance makes provision for the imposition of a tax of five dollars upon all unmarried persons of both sexes between the ages of 21 and 55 years who may reside in the territory for a period of three months during the year 1921, Indians and members of the Royal Canadian Mounted Police excepted. Employers of labour must furnish a list of their employees to the tax collector when required and must pay the tax for every employee liable to same, deducting the amount from their salaries or wages. Every employer is liable for such tax whether the persons who work for him are employed directly or through a contractor, and he may deduct from the amount payable to the contractor all such payments made on account of persons furnished to him by such contractor.

HIGH COST OF HOUSING IN GREAT BRITAIN

Endorsation of Building Guilds

THE British Ministry of Health has issued a report of a Departmental Committee which was appointed to inquire into "the reasons for the present high cost of building working class dwellings," and to make recommendations as to any practicable measures for reducing the cost.

The committee recognized the great need for workmen's houses, and came to the conclusion that the government policy had had a prejudicial effect on the cost of building through failure to establish any community of interest between the state and the local authority in securing economy, and the flooding of the market with an unprecedented state-aided house building programme in excess of available building resources. High wages, the increased cost of materials and transport and the uncertainty of delivery were mentioned as other factors making for the high cost of building.

The committee made a large number of recommendations among which were the following:

(1) That a definite limit be fixed to the number of houses to be erected by local authorities; and that if state aid is necessary in the future the financial arrangements be amended so that the state contribution is a percentage only of the total deficit, varying according to the circumstances of each case, in order that community of interest in economy may be established.

(2) That local authorities should not be permitted to adopt plans providing only for semi-detached houses, on excessive road frontages, but that groups of four or six houses should be encouraged on suitable sites, and sites for shoops and other purposes than housing should be reserved.

(3) That the use of the more simple types of houses only be permitted in any new work undertaken. That local authorities be encouraged to avail themselves to the utmost of the latitude given to adapt the standard specifications to local circumstances. That local

builders be encouraged to suggest modifications of construction which will secure economy. That the standardization of windows, doors, etc., be more rigidly enforced.

(4) That local authorities should refrain from letting contracts for houses in any area where the available building resources are already fully occupied and where consequently building costs may tend unduly to increase. That after the urgent need for providing workmen's houses has been met, steps should be taken in periods of depression in the building industry to use the available labour and materials for the further provision of houses which may then be desirable.

(5) That some scheme for the augmentation of certain skilled trades be put in operation, the scheme to be devised by the building industry. That housing contracts should not be let in excess of the resources of building production. That a committee be appointed to make an exhaustive inquiry into the questions affecting output in the building trade.

(6) That the clause in the housing contracts providing for a sliding scale for materials be eliminated as tending to maintain prices at a high level.

(7) That normal conditions of contract should be restored, eliminating at once provisions for fluctuations of cost of materials, and, as soon as labour conditions appear reasonably normal, for fluctuations of rates of wages. That local authorities should be allowed to provide houses by direct labour in small numbers at first, to be subsequently increased if they prove economical. That contracts with guilds should be as nearly as possible similar to other contracts and should provide for the guild completing the work undertaken at a fixed sum, and that guilds should be encouraged to contract for the labour only as well as for the whole work. That direct building by the government should be restricted to a minimum.

(8) That an endeavour should be made to obtain cost statistics on all important housing schemes and the results should be tabulated for reference purposes.

With regard to the building guilds the Committee says: "We have considered the question of guild contracts and are in sympathy with the policy of provision of workmen's houses by guilds and think that, subject to reasonable safeguard the system has much to com-

mend it. We have been unable to obtain sufficient information to enable us to say what effect this system will have upon the costs. We do think, however, that the differentiation in wages and condition of payment by the guilds is undesirable, and that it is likely to cause unrest in the building trade. The enabling provisions of the contract whereby the guilds are able to give to their employees terms by way of payment for wet time and sick time, and holidays which are not recognized in the industry as a whole, we think must have a disturbing influence upon building labour, which is such a large factor in considering the question of cost. There would be much less objection to such differentiation if the contracts were for a fixed and definite sum. This, however, is not the fact and no maximum price is prescribed as in the case of direct labour operations of local authorities, neither is there any incentive by way of inducements or penalties for the exercise of economy as is provided in all other cost contracts..... Subject, however, to the fixing of maximum prices which would be not more

than could be obtained in similar circumstances in open competition by builders, there seems to be no reason why this guild building should not be encouraged. Any industrial movement of this nature which makes a radical departure from customary conditions must progress with caution.

Two members of the committee in a minority report favour a more generous spirit in awarding contracts to the building guilds and state that "so far as actual results are concerned, the guilds have not been operating long enough to present evidence of results on a large scale, but the evidence given shows that a saving has been effected on each house completed of from £80 up to £150 per house as against the builders' estimates. This is after special costs for payment of lost time for inclement weather, holidays and sickness have been met, and what is of equal importance is the fact given in evidence that the output on guild contracts is higher than private builders obtain on their contracts. These two facts go to show that in execution of guild contracts a greater standard of efficiency is attained."

ANNUAL REPORT OF WORKERS' EDUCATIONAL ASSOCIATION IN GREAT BRITAIN, 1920-21

THE latest annual report of the Workers' Educational Association in Great Britain points to an increasing popularity of working-class education. For the purposes of the work of the Association, England, Scotland and Wales are divided into 13 districts. In 11 of these districts substantial increases are reported in the number of teachers, classes, members, students, and affiliated societies, while two report slight decreases. The following table illustrates the growth of the Society since 1906:

	1906	1914	1917	1921
Branches.....	13	179	173	317
Affiliated Societies.....	283	2,555	2,336	2,896
Individual members.....	2,612	11,430	10,750	23,880

TUTORIAL CLASSES: During the session 1920-21, as many as 293 tutorial classes were conducted, the number of students being 6,820, of which 4,729 were men, and 2,091 women. The following are the chief occupations among the students: Teaching, mining and quarrying, clerical work, telegraphy, engineering, civil service, housekeeping, factory work, building, etc. The choice of subjects shows a great desire for subjects outside the range of pure Economics, such as Literature, Music, Biology and Anthropology.

OTHER CLASSES: During the session 1920-21, there was a marked increase in the number of one-year classes, some 463 of these classes having been

held, at which 12,474 students were in attendance. While the majority of these classes received grants from public bodies, there were also a number which were non-grant earning. The following subjects were taken: Economics and Industrial History; Literature; Political Science, Psychology and Philosophy; General History; Music; Languages; and Natural Science. Of these, Economics and History were the most popular.

STUDY CIRCLES: In addition to the one-year classes, a large number of study circles were organized, over 800 public lectures were given, while educational conferences to the number of 69 were organized either by the W. E. A. alone or in co-operation with other bodies. In connection with 26 branches, Educational Advisory Committees were formed to watch educational developments under the Education Act, 1918.

Apart from these activities, a large number of lectures and lecture courses were arranged for various other associations and assemblies. Six residential summer schools and one non-residential recognized by the Board of Education were held at various centres during 1920, all of which were considered to have been very successful.

THE WORKERS' EDUCATIONAL TRADE UNION COMMITTEE: During 1919, a body entitled the Workers' Educational Trade Union Committee, consisting of representatives of the W. E. A. and trade unions subscribing to the scheme, was formed in conjunction with the Iron and Steel Trades Confederation. The W. E. T. U. C. consists of a central committee and seven divisional committees, which operate over all parts of England, Scotland, and Wales in which there are branches of the Iron and Steel Trades Confederation. Each of these Committees consists of representatives of the Confederation and the W. E. A., the Confederation in each case having the majority representation. A member of the Confederation is appointed as chairman and the W. E. A. district secretary is appointed as secretary. Each divisional committee is responsible for organizing the educational activities of

the Confederation within its own division, submitting to the central committee schemes of work, with estimates of cost, for which, if approved, the costs are met from funds provided by the Confederation. During the past year nine week-ends schools, catering for 239 students, and two special summer schools with 48 students, were successfully conducted. A large number of lectures and courses of lectures have been given to Confederation members, and two full-time tutors, one in Scotland and one in South Wales, are also assisting in the work, the W. E. T. U. C. contributing towards the cost of their appointment.

The constitution of the W. E. T. U. C. provides for other trade unions participating in the scheme under such conditions as will enable them to meet the needs of their members in an effective and economical way. Each union can control its own finances and the education provided. The constitution provides the means whereby trade union activities may be co-ordinated while leaving each union complete freedom to decide its own educational programme.

The success of the scheme has led to inquiries from other trade unions. The Union of Postal Workers at its last annual conference definitely decided to apply for inclusion, and the necessary steps are being taken to provide for this in time for the opening of the winter session, 1921-22. With the object of bringing the success of its methods before the notice of the trade union movement generally, a conference of trade unions was convened by the W. E. T. U. C. on October 16, 1920, when the following resolution was unanimously approved:

This conference is of opinion that the time has arrived when the trade union movement should carefully consider the best and most economical means of meeting the educational needs of its members. It therefore approves the appointment of a Committee from the members of the Conference to consider and report to the bodies represented at the Conference, and to the Parliamentary Committee of the Trades Union Congress.

Sixteen of the national trade unions represented at the Conference agreed

to participate in the inquiry, and a committee was appointed, which reported later. Among the recommendations of this committee were the following: (1) The endorsement of the organization set up by the Iron and Steel Trades Confederation; (2) that educational institutions or organizations supported by trade union funds must provide for adequate working class control. The report of the Committee was presented to the Trades Union Congress, at its annual convention held at Cardiff during the first week of September, and was endorsed by it. The General Council of the Congress was instructed to consult with this committee as to the best means of giving effect to its programme, including the maintenance of the Central Labour College, Ruskin College, and other existing trade union colleges.

Throughout the year the W. E. A. has worked in very close connection with the Co-operative Union, and a feature of the year is said to have been the large

number of educational conferences organized by the Co-operative Union and the W. E. A.

The Central Library developed out of the W. E. A. library is increasingly useful to students. During the year it has issued 19,044 volumes, of which 9,586 were issued to individual students, 7,057 to groups of students, 968 to public libraries, 732 to rural libraries, and 701 to societies, institutes, etc.

The report states that similar associations are existing and prospering in Australia (New South Wales, Victoria, Tasmania, Queensland); New Zealand; India; South Africa (Durban, The Transvaal); and Canada (Toronto, Ottawa).

The movement depends for its funds entirely on voluntary subscriptions, donations, and affiliation fees. Copies of the report may be obtained on application to the general secretary, Mr. J. M. Mactavish, 16 Harpur Street, London, W.C.

FURTHER ACTION TOWARD THE ALLEVIATION OF UNEMPLOYMENT CONDITIONS IN CANADA

ON October 12, the Minister of Labour wrote to the various provincial governments outlining the steps which the Federal Government was prepared to take in conjunction with them for the relief of unemployment. The policy of the government was set forth in the October issue of the LABOUR GAZETTE. Several provincial governments have expressed their willingness to co-operate along the lines proposed.

The Hon. W. E. Raney, Attorney General of Ontario, has made a public statement to the effect that the government of that province is prepared to pay one-third of the excess cost of public works approved by its officers. "The condition we make," he is reported as saying, "is that the works to which we will contribute must be works undertaken for the purpose of providing employment. In other words, the govern-

ment will not pay any part of the cost of works which would have been carried on anyway. Every dollar the government spends must go towards undertakings over and above the normal municipal programme." The municipality asking for assistance will be required to submit two estimates, one of the actual cost of the work, and the other the normal cost in the work was undertaken later on in a more favourable season with more efficient labour. These estimates will be examined by government engineers and, if they are endorsed as reasonable, the government will pay one-third of the difference. The plan as announced by Mr. Raney is not, it will be seen, precisely as laid down by the federal minister of labour. No official communication on the subject has been at the close of the month received by the Minister of Labour.

BRITISH OFFICIAL REPORT ON POLITICAL AND ECONOMIC SITUATION IN RUSSIA

A DEPARTMENTAL committee of the British Foreign Office was appointed in May, 1920, under the chairmanship of the Right Hon. Lord Emmott, G.C.M.G., to collect information on Russia. The terms of its reference were "to inquire into conditions under which British subjects were recently imprisoned or detained in Russia, and generally to obtain information in regard to the economic and political situation in that country." The committee issued a report in November, 1920, upon the first part of its reference (Cmd. 1041). The report upon Political and Economic Conditions in Russia has now been published (Cmd 1240). In its preparation the committee was assisted by Mr. L. G. M. Gall, formerly of the British Embassy at Petrograd, and other experts in Russian affairs, and had at its disposal original documents which are not available to the public. The report is a comprehensive study consisting of 168 pages, describing the progress of the Communist or Bolshevik party in pre-Revolutionary days, during the great war and the first revolution, and culminating in the overthrow of the Provisional Government and the establishment of the Soviet Government in October, 1917. "We doubt," the committee states, "whether the supreme importance of a close study of events in Russia, and of their causes and of their effects upon politics, society, and economic thought in Europe and throughout the world, is adequately realized. We venture to suggest that such a study would be of the highest value to mankind."

Of special interest in the account of the structure of the Soviet System of Government, from the village soviets to the All-Russian Congress of Soviets, the latter body being nominally, during its brief sessions, the supreme power in Soviet Russia. In actual practice, however, the chief administrative authority is the All-Russian Extraordinary

Commission, the special instrument of the "Dictatorship of the Proletariat." Other sections of the report describe the position of trade unions under the Soviets, and the degree of political liberty enjoyed by the people. The relationship which exists between the Soviet Government and the peasants, who form from 80 to 85 per cent of the population of Russia is also explained. "The peasant question," the report says, "is of paramount importance to any Russian Government, and we are convinced that the permanence of any political and social order in Russia must largely depend upon how it is solved." "The peasant is the enigma," the committee say elsewhere, "and may prove to be the decisive factor in whatever may be the outcome of the Russian revolution."

The second section of the report contains a sketch of the economic situation in Russia. The economic breakdown which occurred under the Tzarist régime is shown to have precipitated the revolutionary outbreak of 1917. Some account is given, so far as material is available, of the results of the general nationalization of industry which was carried out by the Communists under the adverse conditions of national bankruptcy, the Allies' blockade, and civil war. The effects of the Soviets' industrial policy upon the workers, and on the trade unions, are also described. The Bolshevik remedies for the admitted economic collapse are stated as follows: (1) The moral suasion of the worker by propaganda; (2) payment according to work done; and (3) the conscription or militarization of labour. The foreign policy of the Soviet Government is embodied in the Third or Communist International, established at Moscow, 1919, its object being "to advocate international revolution on Communist lines, and everywhere actively to encourage, support and participate in movements directed to the

overthrow of the existing political and economic institutions in other countries."

The conclusions reached by the committee are that no aid should be given by other countries for the economic reconstruction of Russia until the policy of revolutionary propaganda in foreign countries has been abandoned; that the co-operation of the peasantry is indispensable to the economic reconstruction of Russia, and that agricultural production and transportation must be reorganized and resumed before industrial reconstruction can be undertaken; that "the administrative incompetence

and corruption into which the departments have fallen" must be remedied before supplies can be made available among the population and the productivity of labour thus restored; that if the Extraordinary Commission continue to exercise their present irresponsible powers, no agreements between the Soviet Government and foreign capitalists can be effective for reconstruction, since foreigners residing in Russia will be deprived of any guarantees of protection.

Appendices to the report contain copious extracts from the writings and speeches of revolutionary leaders.

EMPLOYMENT CONDITIONS IN CANADA FROM JULY 17 TO OCTOBER 6, 1921, AS REPORTED BY EMPLOYERS

THE employment situation during the three months that have elapsed since the accompanying chart was last reviewed in the LABOUR GAZETTE, has shown continued though moderate improvement. Slight fluctuations have been reported by employers from week to week, but the general movement has been favourable. The index number of employment reached its lowest point during the period under review on August 27, when it stood at 88.7. A temporary shutdown in locomotive shops, combined with pronounced losses in other divisions of the iron and steel industry, largely caused the slight decline in the curve. Recovery from this shutdown and important increases in several industries (notably textiles and logging) were manifested in September; the highest point reached by the index number from July 17 to October 8 occurred on September 24 when it stood at 90.2. A nominal decline was registered during the fortnight ended October 8.

Returns made by some 5,000 employers to the Dominion Headquarters of the Employment Service of Canada showed the following net changes:—

Fortnight ended July 30, a decrease of 1523 persons, or .2 per cent.

Fortnight ended August 13, an increase of 3,427 persons, or .5 per cent.

Fortnight ended August 27, a decrease of 2,639 persons, or .4 per cent.

Fortnight ended September 10, an increase of 8,927 persons, or 1.4 per cent.

Fortnight ended September 24, an increase of 3,944 persons, or .6 per cent.

Fortnight ended October 8, a decrease of 595 persons, or .1 per cent.

There was, therefore, a net increase of 11,541 persons during the twelve weeks under review. Expansion in the Quebec-Ontario district was responsible for the greater part of this gain; 9,607 employees were added to the payrolls of some 3,400 concerns reporting. Of this number, 6,608 workers found employment in the latter province. The gains were distributed over the period under review, but extension of operations was most marked in September, due partly to the re-opening of the railway car shops mentioned above. The Prairie provinces also reported increased activity, over 3,000 employees having been added to the staffs of the firms making returns. On the other hand, in British Columbia and Maritime Provinces conditions were not as favorable; in the former district, approximately 1,000 persons were released by employers,

while in the latter the decline was nominal.

The most noteworthy expansions during the twelve weeks under review occurred in textiles and logging. In the former group firms enlarged their pay-rolls by over 7,300 workers; in the latter about 3,900 men were sent to the bush by some 78 concerns, an indication of seasonal extension of operations. Large gains were also registered in edible palnt products, leather goods, coal mining, local, railway and water transportation and railway construction; the net increase in each case affected between 1,000 and 2,700 workers. The expansion in textiles follows an extended period of inactivity during which employment was at a low level; the increases during the quarter under review, however, do not restore payrolls of the majority of concerns to normal. The thread, yarn and cloth, hosiery and knit goods and clothing divisions shared in the gains; the manufacture of men's garments experienced relatively more activity than

women's clothing factories, although there were also gains in the latter. Ontario and Quebec absorbed the bulk of the expansion in the textile group; it was, however, also noted in some degree in every section of the country. The gains in logging were considerably more pronounced in Ontario than elsewhere; Quebec firms continued to indicate curtailed operations. In edible plant products most of the increases were caused by seasonal operations in canneries, mainly in Ontario. During the last four weeks of the period under review a large number of persons were released from preserving plants; despite this the level of employment at the beginning of October was still above the average for this year. In the leather group the additions to staffs reflected increased production in the manufacture of boots and shoes; tanneries also were busier. As in the case of textiles, these gains indicated partial revival from low activity registered for many months. The bulk of the increase in coal mining occurred

in Alberta, though Nova Scotia shared in the improvement to some extent. Nevertheless, a large number of mines in both coal fields continued to work only a few days a week. Practically all the gains in local transportation were due to extensions and improvement work on the civic electric line in Toronto. The expansion in railway transportation was of a general nature; it was, however, more pronounced in the western provinces, where it partly indicated activity to cope with harvest requirements. The gains in railway construction also were distributed over the whole country.

The most important contractions during the period under review were those of a seasonal nature which occurred in lumber and its products; saw mills reported declines aggregating approximately 6,000 persons, while furniture factories reported slight increases in activity. In pulp and paper products moreover there were pronounced declines, though the shrinkage in these industries was less than in sawmills. Glass factories reported considerable curtailment in the volume of employment afforded. Summer hotels, towards the latter part of the quarter under review, released a substantial number of persons. Declines in one of the largest establishments in Ontario caused retail trade to show a net decrease. In iron and steel products there were important losses in the early part of the period, partly due to temporary shutdowns in locomotive shops; some recovery occurred during the second part of August and early in September, while the last part of the quarter was characterized by steady though rather small increases in the volume of employment afforded in the

group as a whole. Marked recessions were indicated by firms manufacturing rubber products during the latter part of July and the first half of August; some revival in trade during the succeeding eight weeks failed to restore employment to its previous level. Tobacco factories and electric apparatus plants were considerably less busy, particularly in Quebec. In building construction, noteworthy gains occurred during the first four weeks of the period, but decreases reported more recently have caused a net decline to be registered for the quarter. In telephone operations there were contractions affecting approximately 650 workers; most of these persons were released by concerns in Ontario. Seasonal losses in fish canneries in British Columbia were partly counterbalanced by expansion in abattoirs and meat packing plants in Ontario, though the balance of employment in edible animal products was unfavourable.

Practically all industries reported curtailed operations in comparison with the corresponding period in 1920. Leather products, coal mining; local and water transportation were the only exceptions; in these groups employment was in greater volume than during the same quarter of last year. The situation in textiles, non-ferrous metal products, rubber, tobacco, electric apparatus manufacturing, construction and trade was particularly unfavourable when compared with conditions in the same months in 1920.

A summary of the employment conditions during the latter part of September and the first part of October appears also in the regular monthly article on page 1342 of this issue.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDED SEPTEMBER 30, 1921, AS REPORTED BY UNIONS MAKING RETURNS

THE present article on unemployment among the members of local trade unions deals with the situation reported during the quarter ended September 30, 1921. The unemployment registered at the close of July was 9.1 per cent of the membership reported, being about 4 per cent less than in June; during the two following months conditions continued to improve, though almost imperceptibly, and at the end of September the percentage of idleness stood at 8.5. For the corresponding period of 1920, trade unions reported only 3.3 per cent of their members as out of work. The most noteworthy improvement reported in recent months occurred in manufacturing, in which there was from 6 to 9 per cent less idleness, and in building construction, which afforded about 6 per cent more employment at the close of the period than at the beginning.

Transportation also was more active than in the preceding quarter. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons occupied in work other than their own trades, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the unions reporting.)

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18, by months for 1919-20 and to October of this year. The curve has shown a downward tendency since the end of

March, when the percentage of unemployment stood at 16.5, the highest point reached in the record. Despite the improvement that has been evidenced without interruption since then, the curve is still very much higher than in the corresponding period in previous years for which figures are available.

Manitoba, Saskatchewan and Alberta, reported more favourable conditions during the period under review than did the other provinces. The situation in Ontario remained fairly steady; in Quebec there was more unemployment during August and September than in July, although the percentages of unemployment reported for the three months under review were considerably smaller than in the three months preceding July. In the Maritime provinces some improvement in conditions has been noted since midsummer. All districts reported substantially more unemployment than in the same months of 1920. Table I on this page summarizes the returns by provinces.

During July, unions in the manufacturing and mechanical industries registered about 8 per cent more idleness than in the corresponding month of last year. Dullness in the metal trades and in food, tobacco and liquors, clothing and pulp and paper, including printing and publishing, contributed to this decline in activity. Leather workers, however, reported more employment; this was the only division in the manufacturing group to show improvement. Transportation workers also were less fully employed, reporting about 2 per cent more idleness. This increase in slackness was especially noticeable among steam railway employees. A very pronounced decrease in employment was reported in coal and asbestos mining as compared with July, 1920; in that month the percentage of idleness stood at .9 while for the same month of this year it was 11.5. In building and construction approximately 14 per cent less employment was registered; Ontario and Quebec reported a substantial amount of this depression.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Sept. 1921	8.68	6.99	13.80	6.22	3.92	2.51	2.98	12.48	8.47

The percentages reported unemployed in the different groups of industries are indicate in table III on page 1402.

In August, manufacturing showed somewhat less divergence from its level of the same month in 1920 than was indicated in comparisons between preceding months and the same periods of last year. Approximately 13 per cent of the members were out of work in August as compared with almost 8 per cent in August of 1920. Metal tradesmen and workers in the food, tobacco and liquors and paper and printing groups continued to report marked increases in idleness. On the other hand, clothing and leather workers were considerably more fully employed. In transportation,

mining and building and construction there continued to be a great deal less activity during August than in the corresponding month in 1920.

During September, considerably more slackness was again reported in the manufacturing group as compared with the same month in last year. Improvement still continued to be noted among clothing and leather workers; the metal trades again registered a substantial decline in employment. Tradesmen in the printing and publishing group continued to record increased slackness; this was partly an indirect result of the industrial dispute that has been in force for several months past. Pulp and paper makers also were less busy. While improvement over preceding months was

registered in building and construction, particularly in Quebec and Ontario, there was still about 10 per cent less employment than in September, 1920. Logging and lumber workers, from which returns for last September are not available, reported a large number of unemployed members. Fishermen also registered less activity.

The accompanying tabulations (Table II) show in some details the returns for the month ended September 30, in which 1,615 unions with an aggregate membership of 183,373 persons, reported 15,530 of their members, or 8.5 per cent, unemployed. The table also gives the general percentages of unemployment in the various trades and industries in July and August.

EMPLOYMENT IN THE BUILDING TRADES AS INDICATED BY BUILDING PERMITS ISSUED DURING JULY-SEPTEMBER

EMPLOYMENT in the building trades, as indicated by the value of building permits issued in 56 cities showed a net decline during the quarter ended September 30 as compared with the preceding three months and also with the corresponding quarter in 1920. The value for July, 1921, was approximately twenty-two per cent below that for June; in August it was about five per cent less than in July, while in September it was slightly over three per cent larger than in August. The amount for that month, however, was somewhat below the July level. The total for the quarter stood at \$29,786,589 as compared with an aggregate of \$38,666,372 for April, May and June and with \$31,962,401 in the third quarter of last year. This indicates a decline of practically twenty-

three per cent in the former and of about seven per cent in the latter comparison.

During the first month of the quarter, Quebec was the only province that showed an increase in the volume of building authorized as compared with the figures for July, 1920; the value of the permits issued in Quebec in July totalled \$2,506,413, an increase of \$1,089,933 over July of last year. The greater part of the expansion was due to gains in the building contemplated in Montreal, Quebec and Westmount. The most pronounced losses in this comparison occurred in Manitoba, where in the city of Winnipeg there was a decrease in building permits of over \$290,000. The 56 cities whose figures are used in this report showed a net decrease of about

twenty-five per cent in comparison with July, 1920.

In August, New Brunswick, Quebec, Manitoba, Alberta and British Columbia registered expansion in the volume of building authorized in comparison with August of last year. Manitoba, with an increase of \$318,800, manifested the most noteworthy gain; Winnipeg and Brandon both reported large increases. The most pronounced contraction occurred in Ontario, where the value of the permits issued declined by over \$870,000. Toronto showed a loss of nearly \$180,000 during August, and in Brantford there was a decrease of well over \$600,000.

In September there was an increase of approximately nine per cent in value of the building permits issued as compared with the same month in 1920. New Brunswick and Manitoba, only, reported reductions in this comparison, while the increase of \$453,367, or practically nineteen per cent, in Quebec was the largest. Montreal issued permits valued at \$2,137,364 for the month, an increase of \$836,624 over September of last year.

A comparison in some detail between the statements for September and those for August may be found on page 1343 of this issue.

The accompanying table shows, in detail, the value of the building permits issued by months for the third quarter of this year, together with a comparison of the monthly totals with the corresponding totals for the last year. The thirty-five cities for which a continuous monthly record has been kept since 1910 are marked by asterisks.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA DURING
PERIOD JUNE 20—SEPTEMBER 24, 1921

THE present article on the work of the offices of the Employment Service of Canada deals with the business transacted during the period June 20 to September 24, 1921. On the whole the volume of business was considerably less in the period under review than in the corresponding period of 1920. Applications for employment showed a marked increase over the same period of last year, about 18.6 per cent more applications having been registered, but in vacancies offered and in placements effected a contraction was noted.

The accompanying chart, which presents the statistical returns from the offices by weekly periods, shows that at the beginning of June, 1921, the supply of workers was considerably in excess of the demand, while at the same period

in 1920, vacancies slightly exceed applications. In 1920 the demand for labour during the entire harvest season was in excess of the labour offered for employment. During the week ended September 3, 1921, the curve of vacancies registered a considerable increase, exceeding by more than 4,000 the previous high record of 1920. This abnormal increase was due to the heavy demands for additional harvest labour in Saskatchewan, wet weather during August having delayed harvest operations. During the period under review the curve of applications showed a marked increase over last year and during the week ended September 3 registered the highest point attained since the establishment of the Employment Service. The curve of placements did

not exceed the record figure of 1920, but the high level of the harvest period extended over a greater length of time in 1921 than in the previous year. During the latter part of the period under review a marked decline was shown when applications, vacancies, and placements were again at the pre-harvest level. At the end of September, 1921, vacancies and placements were considerably less, having reached a level considerably lower than at the same time in 1920. Applications were slightly in excess of those registered in the same period last year.

During the period under review the offices reported that 119,182 placements (108,521 of men and 10,661 of women)

were effected as compared with 125,956 during the corresponding period of 1920, a decline of about five per cent. Placements in casual employment during the period numbered 19,703, while during the same period of last year, 24,089 were reported. The number of applications registered at the offices during the period under review totalled 178,030 (of which 149,280 were of men and 28,750 of women) as compared with 144,917 applications registered during the corresponding period of last year. Opportunities for employment notified by employers to the Service numbered 175,147 (145,822 for men and 29,325 for women) as compared with 176,398 during this period last year.

RECENT CHANGES IN WAGES AND HOURS OF LABOUR IN CANADA

THE following is a statement by industrial groups of the more important changes in wages reported to the Department of Labour during the month of October.

IRON AND STEEL PRODUCTS. — *Brantford, Ont.* Two firms manufacturing agricultural implements put into effect in September reductions of wages ranging in one case from 20 to 37½ per cent and in the other from 20 to 25 per cent. *Halifax, N. S.* Shipyard workers' wages were recently reduced 5 cents per hour. About 500 men were affected; the rates for the principal classes in metal trades were: old rate, 67½ cents per hour; new rate, 62½ cents.

PULP AND PAPER MANUFACTURING. — *Quebec.* Toward the end of August, 1921, wages of about 800 paper mill employees were reduced 16⅔ per cent by one firm in Quebec province. *Ontario.* Wages of pulp and sulphite workers were reduced in October on finding of the Arbitration Board of May, 1921. Rates for one firm follow: Wood room, old rates, 54-62 cents per hour, new rates, 41-56 cents; grinder room, old rates, 58 cents, new rate 48 cents; sul-

phite mill, old rates, 54-92 cents, new rates, 45-83 cents; wet room, old rates, 54 and 57 cents, new rates, 45 and 48 cents; mixing room, old rate, 54 cents, new rate, 45 cents; electrical, old rates, 60-81 cents, new rates, 54-73 cents; finishing room, old rates, 54-58 cents, new rates, 45-48 cents; steam plant, old rates, 54-84 cents, new rates, 45-76 cents; miscellaneous, old rates, 54-66 cents, new rates, 45-59 cents; yard, old rates, 50-84 cents, new rates, 40-76 cents. Operating, electrical, (new mill), old rates, 65-81 cents, new rates, 59-73 cents.

WOODWORKING. — *Brantford, Ont.* Wages of machine hands in employ of one firm were cut 20 per cent on September 22.

FOOD MANUFACTURING. — *Brantford, Ont.* Wages of bakers in employ of one firm were cut 20 per cent on September 23.

TEXTILE MANUFACTURING. — *Guelph, Ont.* Further particulars received in the Department about the wages of carpet weavers which were reported in the September issue of the LABOUR GAZETTE as having been cut 12½ per cent in July

show that this reduction was the removal of a bonus previously granted of 5 per cent for weavers, 10 per cent for spinners and 15 per cent for other classes.

CONSTRUCTION. — *Hamilton, Ont.* The union scale for bricklayers was reduced on November 1 from \$1 to 90 cents per hour, eight hours per day. *Welland Ship Canal.* Wages of workers on the Welland Ship Canal were recently adjusted downwards, new wage rates being effective as of September 1, 1921. The new rates are given in this issue of the

LABOUR GAZETTE under the heading "Recent Industrial Agreements and Schedules of Wages."

MINING. — *Trail, B.C.* Wages per eight hour day of employees in one firm were reduced on October 1 as follows: 80 common labourers from \$3.75 to \$3.50; wages of 229 mechanics, 160 smelter men and 232 refiners were reduced 25 cents per day. Contractors whose wages averaged \$41.50 per week and bonus workers whose wages averaged \$43.20 had wages and bonus cut of 5 per cent.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Similar agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement the rates of wages for principal classes of labour are given, with other information of general interest.

Metal Trades

VANCOUVER, B. C. — LOCAL EMPLOYERS, AND SHEET METAL WORKERS, No. 280.—Agreement in effect from June, 1921, to June, 1922. Only union members, or those who agree to become members, to be employed. Failing union men, other help may be employed temporarily.

Parties to this agreement not to work on buildings where sheet metal work and roofing is not supplied and erected by a sheet metal contractor; or where union employees have withdrawn; or

where previous work of this kind has been done with the indebtedness on either side until such indebtedness shall have been discharged. When during progress of work, promised money is withheld, work may be stopped until matter shall have been adjusted.

No union member to do sheet metal work, roofing, etc., except as a journeyman, provided employer agrees to divide work satisfactorily to union members. Employers not to request employees to instal unfair material unless covered by patent rights.

Minimum wages: Per hour—journeymen, 90 cents; junior members, three-fourths of journeymen's rate.

Differences to be settled by a joint committee of three members from each party, committee to have power to draw up rules of procedure and submit same to both parties for their approval. Before definite action is taken on disputes which can not be settled by said committee, matter to be referred to general office of the union, and no strike or lockout to take place until matter has been investigated by an International officer and decision rendered.

Unless ninety days' notice before March 1, 1922, is given by either party to open this agreement, same to continue in effect until notice is given. In

event of any suggested change in wages, parties to meet and try to bring about an adjustment.

Working rules:

Hours of labour: eight per day, forty-four per week.

One apprentice to three or less journeymen. One junior member to every four journeymen or majority fraction thereof.

Members of union not to be allowed to do any sheet metal work for any person without first obtaining a permit from the union.

Overtime rates, time and one-half until 9 p.m.; thereafter and Saturday afternoons, Sundays and holidays, double time. No work on Labour Day.

Printing

VANCOUVER, B.C.—PROPRIETORS OF LOCAL BOOK AND JOB OFFICES AND TYPOGRAPHICAL UNION No. 226. Agreement in effect from July 4, 1921, to August 31, 1922.

Only union members to be employed.

Hours per day: eight; Saturdays, four. Hours per week, day or night, forty-four.

Wages: Per week—Compositors, stonemen, proof-readers, operators, day work, \$39.60. Night work, \$43.10. Machinist operators, \$3 per week in excess of such rates. Overtime, time and one-half. Holidays, double time.

Agreement may be extended from year to year provided mutually satisfactory agreements can be made whereby wages and hours after August 31, 1922, will be adjusted and settled by local conciliation or arbitration. If an arbitration agreement is later arrived at, the individual employer signing this agreement agrees to become a party to one arbitration proceeding representing the employing commercial printers of Greater Vancouver.

Apprentices: From one to eight journeymen, one apprentice; more than eight journeymen, two apprentices. At least one union member as well as the proprietor to be regularly in composing

room before office is entitled to more than two apprentices. Each office to be entitled to one two-third additional. Apprentices to be at least sixteen years of age; to pass an entrance examination within three months: apprentices to be given every opportunity to learn the trade. When journeymen are working overtime, office to be allowed to work an apprentice, but not more than six hours per week. Minimum wages of apprentices, during third year, one-third of journeyman's wage; during fourth year, one-half; during fifth year, two-thirds. An apprentice on becoming a two-thirder to have right to remain in the office until becoming a fully recognized member of the union.

Union may refuse unfair work.

Foreman must notify Chairman of incompetency of a sub within fifteen days of same starting work.

Textile Products

VICTORIA, B.C.—EMPLOYERS, AND JOURNEYMEN TAILORS OF AMERICA, No. 142. Agreement to be in effect from May 8, 1920, with thirty days' notice of change.

Union shop to be maintained.

Minimum wages: Per week—tailors (operators, pressers, tailors), \$30; helpers, \$20.

Apprentices may be employed by special arrangement with the union.

Hours per week: Eight. Overtime, time and one-half; not more than four hours overtime in any week. Holidays, time and one-half.

Work to be equally divided in slack season. All work to be done on employer's premises: Workshops to be kept in sanitary condition.

Union to furnish union label free.

Food, Drink, Tobacco

CALGARY, ALTA.—CALGARY BREWING AND MALTING COMPANY LIMITED, AND INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL, AND SOFT DRINK WORKERS OF AMERICA, No. 124.

Agreement to be in effect until June 1, 1922, or on 30 days' notice of change.

Employees to become union members two weeks from date of employment. No member to be discharged or discriminated against for upholding union principles.

Hours per day: March 1 to November 1, nine hours for five days, sixth day, five hours. November 1 to March 1, eight hours for five days; sixth day, four. For engineers and firemen, six eight-hour days per week. Overtime, time and one-half.

Stablemen to be paid for six and one-half days a week. One week's holidays per year with pay. Truck drivers, truck assistants, and regular town teamsters to be paid same rate of pay. All other teamsters to be classed as assistants. Truck drivers are recognized as senior to either assistants or teamsters. Malt floor men, eight hours per day. Maltsters to receive same rate as men in department where they are employed when not malting. Elevator men, two weeks' holiday per year with pay if working seven days a week. General mechanics, per hour $77\frac{1}{2}$ cents; overtime, time and one-half. Sundays and after midnight if working sixteen hours previously, double time.

Free temperance beer to be served to employees three times a day.

Extra men engaged during busy season not to be counted as permanent men, nor taken into the union if working less than three months, and must be laid off when their work is finished. Company may hire extra help as required from April 1 to September 30, hiring returned soldiers when available, provided no union men are out of work.

Employees may purchase Company's goods at wholesale rates at local breweries.

In lay-offs, men to be laid off in rotation, fairly and impartially, for periods not exceeding one week.

Employers must approach union secretary when wishing to employ new men. If no competent union men with refer-

ences are available, company may hire as they see fit.

Differences to be referred to a Board of Arbitration of two from each party, and if necessary a fifth disinterested person. Decision to be binding on each side.

Brewery may employ one boy at least sixteen years of age to six men, same not to perform work of a man. Advancement by seniority if there is a competent man in each department.

Brewery agrees to give preference to union made materials and machinery whenever obtainable, provided quality and price of material and machinery is the same.

Wages: Per hour—General mechanics, $77\frac{1}{2}$ cents; mechanic's helper, $59\frac{1}{2}$ cents. Coopers (light work) $70\frac{1}{2}$ cents; coopers, (slack work), bottlers, town teamsters, assistant truckmen, $61\frac{1}{2}$ cents; cellarers, elevator man, etc., $63\frac{1}{2}$ cents; machine men, packers, yard teamsters, stablemen, $58\frac{1}{2}$ cents; labourers, $56\frac{1}{2}$ cents; boys, $38\frac{1}{2}$ cents; extra boys, $41\frac{1}{2}$ cents; engineers, $70\frac{1}{2}$ cents; firemen, $60\frac{3}{4}$ cents.

Building and Construction

MOOSE JAW, SASK.—ASSOCIATION OF CONSTRUCTION INDUSTRIES OF MOOSE JAW, AND BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION No. 2.—Agreement to be in effect from May 17, 1921, to March 31, 1922, and thereafter unless three months' notice of change be given.

Joint Arbitration Committee of three members from each side to be appointed. Committee to have power to enter into any agreement arranging conditions under which bricklaying, masonry and plastering shall be carried on, and to settle difficulties arising. Should either side fail to attend committee meetings, case to go by default.

Employees under this agreement not to work with non-union members.

Hours of Labour: Eight per day, four on Saturdays. Overtime, emergency

only, time and one-half: Saturday afternoons, Sundays and legal holidays, double time. No work on Labour Day.

Wages: Per hour—journeymen, \$1.15; foremen not less than 10 cents per hour additional.

Provisions made for out of town work.

Only good standing members of the union to be employed. Union members not to go out on any sympathetic strike unless ordered to do so by their international Executive Board.

WELLAND SHIP CANAL, ONT.—SCHEDULE OF WORKING RULES AND WAGES GOVERNING CONTRACTORS AND EMPLOYERS ENGAGED IN CONSTRUCTION WORK ON THE NEW WELLAND SHIP CANAL. Rates effective as of September 1, 1921. Rules to be effective as of October 1, 1921. Both wage rates and rules to continue in effect until either party gives thirty days' notice of desired change to the Department of Railways and Canals and the Department of Labour.

Each craft to be allowed the privilege of electing a shop steward for each section of the work. Business agents to be allowed access to work at any time to interview contractor or consult shop steward. If any business agent abuses privileges, contractor may file complaint with the Department of Labour; if complaint is well founded, privileges may be cancelled.

Overtime: Except where otherwise provided by agreement, overtime at time and one-half to be paid for work on Sundays by other classes than those regularly working on Sundays. Holidays, time and one-half. During winter months, nine hours to constitute a working day: overtime, time and one-half.

Wages: Per hour—Blacksmiths, carpenters, electricians, hoist or derrick runners, 70 cents; blacksmiths' helpers, boilermakers' helpers, brakemen, carpenters' helpers, electricians' helpers, hostler (locomotive), machinists' helpers, pipefitters' helpers, pumpmen, riggers' helpers, 50 cents; boilermakers, loco-

motive crane operators, 75 cents; car repairers, drill runner, (well,) 56 cents; cableway and dragline operators and steamshovel engineers, 87 cents; conductors (qualified), compressor operators, channeler runners, locomotive engineers (qualified), powermen (blast-ers), 60 cents; concrete finishers, drill runners, (Jap., tripod, submarine); steamshovel firemen, 52 cents; channeler runners' helpers, 47½ cents; drill runners' helpers, (tripod and submarine), 46 cents; drill runners' helpers, (well), and teamsters, 48 cents; expert labour (concrete mixers), fireman, switchmen, 45 cents; ironworkers, 80 cents; labourers, 37½ cents; linemen, painters, riggers, welders and burners, 65 cents; machinists, 72 cents; pitmen, 43 cents; steamshovel cranemen, 68 cents; watchmen, 35 cents; waterboy, 17 cents. Chauffeur, \$116 per month.

"The Department further requests that residents of Canada only should be employed on this work, and that married men should be given preference over single men."

Transportation—Electric Railways.

WINDSOR, ONT.—ESSEX DIVISION, HYDRO ELECTRIC RAILWAYS, AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA No. 616. Agreement in effect from July 1, 1921 to July 1, 1922.

Employers through properly accredited officers to treat with employees, members of association, through their representatives on matters and grievances arising.

Hours of labour, motormen and conductors, nine, maximum, ten. Work over ten consecutive hours, or work not completed in eleven consecutive hours, overtime.

Men training students, fifty cents extra per day.

No penalty for men on late runs missing or sleeping in, unless more than twice in thirty days.

Wages of trainmen: Per hour—first six months, 45 cents; second six months,

50 cents; after first year, 55 cents. Overtime, 20 cents extra per hour.

Uniforms: Commission to advance to motormen and conductors of one year's service preceding date of agreement sum of \$25 to purchase of uniforms; to same classes of less than one year, \$7 for each week following purchase of uniform, weekly payments not to exceed \$25. Caps and badges to be supplied.

In event of vacancy, first extra man to be entitled to run for period not to exceed five days, after which conductors or motormen ranking below in seniority may re-select runs.

Claims for shortage against conductors to be made within ten days.

All passenger and freight cars to be operated by members of Division 616.

Employees in Service for one year to have two weeks' vacation each year.

Services—Amusements

CALGARY, ALTA.—PRINCESS THEATRE, GRAND THEATRE, REGENT THEATRE, ALLEN THEATRE, CAPITOL THEATRE AND EMPRESS THEATRE, AND INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE OPERATORS OF THE UNITED STATES AND CANADA, No. 302. Agreement in effect from September 9, 1921, to September 5, 1922.

Only men supplied by union to be employed.

Minimum rate: Per week—moving picture machine operator, \$45, maximum of six hours per day, six days per week. Extra work, per hour, \$1.25—not more than eight hours per day.

Two weeks' notice of dismissal to be given, or two weeks' pay.

Employers to have right to make rules and regulations for conduct and management of performances and working conditions. Employees to obey all rules and directions of authorized representative of employers, not conflicting with union agreement or rules.

Weekly employees to give two weeks' notice of leaving employment, except in case of non-payment of salaries.

Public Utilities

PRINCE RUPERT, B.C.—CORPORATION OF CITY OF PRINCE RUPERT TOGETHER WITH ANY SUBORDINATE COMPANY OR COMPANIES, CONTRACTORS OR SUB-CONTRACTORS, DIRECTLY OR INDIRECTLY UNDER ITS CONTROL, DOING BUSINESS IN THE PROVINCE OR WHEREVER THE CITY MAY HEREAFTER OPERATE ITS LINES, AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS No. 344 WITH ITS SUBORDINATE LOCAL UNIONS. Agreement in effect from March 1, 1921, until January 31, 1922, and from month to month unless changed.

Only good-standing union members to be employed.

Any committee with officer of union appointed to interview management to be given an immediate hearing.

Working rules and schedule: Hours per day, eight. Overtime: Holidays, and Saturday afternoons, double time.

Foremen to have had at least three years' experience and not to do journeymen's work. Apprentice to serve three years, not more than one to three journeymen per gang. Apprentices may do journeymen's work during last six months of their term.

Operators to have one day off per week, or, in lieu of this, double pay for seventh day, and to have fourteen consecutive days off per year with pay.

Wages: Per day—lead covered cable foreman, \$8.50, journeyman splicer, \$8.25, lineman, wireman, electrical shopman, power house operator, meterman, arc-trimmer, armature winder, transformer winder, telephone installer, P. B. X. installer, rockman, powerman, batteryman, test board man, switch-board man, trouble man, repair man, inspector, \$7.15; chief meter tester, chief load despatcher, \$8.50; load despatcher, \$8.25; engineers in charge \$6.60 to \$8.25; per month—wire chief, \$209; line foreman, \$220; wire inspector, \$209; apprentice line men, wiremen, metermen, and operators, per day, \$5.10 to \$7.15.

FAIR WAGE CONTRACTS, OCTOBER, 1921

DURING October the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to nineteen fair wage contracts, awarded by the Department of Public Works. All the contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuse and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulations for the suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Construction of Rubble Mound Extension to Mission River Breakwater, Fort William, Ont. Name of contractor, O'Brien & Martin, Ottawa, Ont. Date of contract, October 4, 1921. Amount of contract, \$1.39½ per ton of stone to enter into contract.

Construction of wharf, Mansion's Landing, Cortez Island, B. C. Name of contractor, William Greenlees, Vancouver, B. C. Date of contract, September 26, 1921. Amount of contract, \$4,985.

Improvements to Wharf Approach, Contrecoeur, Que. Name of contractor, Hormisdas Gravel, St. Lambert, Que.

Date of contract, October 3, 1921. Amount of contract, \$3,735.

Hydraulic Ash Hoist in Ex'g Warehouse, Montreal, Que. Name of contractor, The Turnbull Elevator Manufacturing Co., Ltd., Toronto, Ont. Date of contract, October 4, 1921. Amount of contract, \$9,585.

Under Feed Stokers in Connaught Building, Ottawa, Ont. Name of contractor, W. G. Edge, Ltd., Ottawa, Ont. Date of contract, October 6, 1921. Amount of contract, \$20,700.

Under Feed Stokers in Government Printing Bureau, Ottawa, Ont. Name of contractor, W. G. Edge, Ltd., Ottawa, Ont. Date of contract, October 6, 1921. Amount of contract, \$12,530.

Hydraulic Hoist in Custom House, St. John, N. B. Name of contractor, J. H. Doody, St. John, N. B. Date of contract, October 1, 1921. Amount of contract, \$900.

Repairs to Wharves, Hope Bay, North Pender Island, South Pender Island, and North Gabriola Island, B. C. Name of contractor, The Vancouver Pile Driving and Contracting Co., Vancouver, B. C. Date of contract, September 30, 1921. Amount of contract, unit prices.

Alterations in the Offices of Customs and Inland Revenue Departments, Kitchener, Ont. Name of contractor, The Globe Furniture Company, Limited, Waterloo, Ont. Date of contract, October 11, 1921. Amount of contract, \$1,265.

Repairs, alterations, etc., to various buildings, Partridge Island Quar. Sta-

tion, St. John, N.B. Name of contractor, W. A. Munro, St. John, N.B. Date of contract, October 18, 1921. Amount of contract, \$6,864.

Alterations, etc., to building for conversion into Nurses' Home, Shaughnessy Military Hospital, Vancouver, B. C. Name of contractor, Edw. J. Ryan Contracting Co., Ltd., Vancouver, B. C. Date of contract, October 11, 1921. Amount of contract, \$4,645.

Construction of Chimney Stack and Alterations to Ventilation System in Temporary Refining Building, Royal Mint, Ottawa, Ont. Name of contractor, Taylor & Lackey, Ottawa, Ont. Date of contract, October 19, 1921. Amount of contract, \$4,284.

Repairs and renewals to Steel Hopper Scow No. 104, Departmental Dredging Fleet, New Brunswick. Name of contractor, Wm. Lewis & Son, St. John N.B. Date of contract, October 15, 1921. Amount of contract, \$4,450.

Roofing of Drill Shed, Ottawa, Ont. Name of contractor, McFarlane-Douglas Co., Ltd., Ottawa, Ont. Date of contract, October 20, 1921. Amount of contract, \$5,417, and \$7.50 per 100 sq. feet for roof boarding which may be required.

Steam boilers and alterations connected therewith in General Post Office, Montreal, Que. Name of contractor, W. G. Edge, Ltd., Ottawa, Ont. Date of contract, October 26, 1921. Amount of contract, \$24,592.

Relaying of pavement on Wellington Street, between Bank Street and Perley Home, Ottawa, Ont. Name of contractor O'Leary's, Ltd., Ottawa, Ont. Date of contract, October 19, 1921. Amount of

contract, \$55,505, and unit prices to apply for additions or deductions to contract.

Reconstruction of part of wharf, Gas-pé, Que. Name of contractor, Arthur Nadeau, Chandler, Que. Date of contract, October 25, 1921. Amount of contract, unit prices.

Alterations to Hot Water Heating System in Public Building, Saskatoon, Sask. Name of contractor, Ross & Parnell, Saskatoon, Sask. Date of contract, October 20, 1921. Amount of contract, \$3,943.

Alterations and additions to Old Power House at Tuxedo Military Hospital, Winnipeg, Man. Name of contractor, Cotter Bros., Ltd., Winnipeg, Man. Date of contract, October 24, 1921. Amount of contract, \$17,450.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in October for supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages and the performance of work under sanitary conditions.

Nature of Order	Amount of Order
Making metal dating stamps and type and other hand stamps, and brass crown seals. \$	522.14
Making and repairing rubber stamps, daters, etc.	192.41
Supplying mail bag fittings.	2,500.00
Making up and supplying letter carriers' uniforms, etc.	11,021.57
Repairing letter boxes, etc.	34.35
Making and supplying stamping ink, pads, etc.	221.29
Satchels.	1,549.79

PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1921

THE general downward movement in wholesale prices in progress since May, 1920, continued during October. Retail prices of foods also fell slightly, the upward movement during August and September, due to seasonal advances in potatoes and butter being reversed. The chief declines were in farm products but there were also important decreases in many other lines.

In retail prices the average cost of a list of twenty-nine staple foods in sixty cities fell to \$11.48 at the beginning of October as compared with \$11.82 at the beginning of September, \$11.44 at the beginning of August, \$10.98 at the beginning of July, \$15.83 in October, 1920, and \$7.99 in October, 1914. The average cost of a budget of foods, fuel and rent in sixty cities was \$22.01 for October, 1921, \$22.36 for September, 1921, \$26.46 for October, 1920, and \$14.47 for October, 1914. The chief changes for the month were decreases in potatoes, meats, cheese, flour and bread, but there were increases in eggs and butter. Anthracite coal and hard wood advanced slightly but soft coal, soft wood, and coal oil declined slightly.

The Departmental index number of wholesale prices was down to 229.2 for October as compared with 232.7 for September, 317.6 for October, 1920, and 138.7 for October, 1914. The chief changes for the month were declines in prices of grain, livestock, and meats, and in miscellaneous foods; but there were also declines in fish, leather, house furnishings, drugs and chemicals, and in sundries. There were slight advances in textiles, gasoline, and coal oil, and seasonal advances in eggs and milk.

The table of retail prices and rentals shows the prices at the beginning of October of over one hundred staple foodstuffs, groceries, coal, wood and coal

oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figures being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts exclusively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desir-

ably located, but still fairly central without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, those being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease

from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices of the several commodities in relation to the 1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

Retail Prices

Meats continued to decline. Sirloin steak averaged 30.4c. per pound as compared with 32.1c. in September, 35.1c. in July, and 35.5c. in January. Round steak averaged 25.7c. per pound as compared with 27.6c. in September, 30.5c. in July, and 31.4c. in January. In rib roast, shoulder roast, and boiling beef the decreases for the month were somewhat less than these. Veal and mutton were also slightly lower. Lamb averaged 30.2c. per pound as compared with 32.1c. in September, 36.6c. in July, and 36.7c. in January. Roast pork averaged 1½c. per pound lower. Pork chops averaged 34.4c. per pound as compared with 35.5c. in September, 35.3c. in July, and 39.5c. in January. Breakfast bacon averaged 46.1c. per

*Preliminary figures. †Six commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.
‡Number of commodities varies from month to month.

65c. Milk at Toronto rose from \$2.30 per eight gallon can to \$2.50.

FISH.—The market for dried fish was still reported to be weak in the West Indies and the price was down from \$6.75 per quintal to \$6.50 at Halifax. The market for herring was also poor, the price being steady at \$6 per barrel. Lake trout, fresh, at Toronto, declined from 15c. to 13c. per pound.

FRUITS AND VEGETABLES.—Grapes advanced from 50c.-55c. per basket to 60c.-65c. Fall apples were down to \$5.00-\$5.50 per barrel at Toronto. Bananas were up from 8c. per pound to 8½c. Oranges were slightly firmer at \$5.00-\$7.50 per box. Evaporated apples were up to 16c. per pound and raisins were up to 23½c. Potatoes were down at Toronto from \$2.25 per bag to \$1.85 in small lots. Fresh tomatoes were up from 30c.-50c. per basket to 60c.-80c. Beans were down from \$3.50 to \$3.25. Onions were up to \$2.50 per hundred and turnips came on at 75c.-\$1.00 per bag at Toronto. Canned tomatoes were 5c. higher at \$1.85 per dozen.

MISCELLANEOUS FOODS.—Flour, spring wheat patents, fell from \$9.70 per barrel to \$7.80 at Toronto. Winter wheat flour was down from \$7 per barrel to \$5.40. Rolled oats fell from \$3.50 per bag to \$3.40. Tapioca was ½c. lower at 7c.-7½c. per pound. Sugar was 50c. per hundred lower at \$8.64. Glucose and maple sugar were slightly lower but honey was firmer. Baking soda was 10c. per hundred lower at \$3.30.

TEXTILES. — The prices of wool and woollen goods were steady. Raw cotton was also little changed at 19.65c. per pound at the middle of October as compared with 19.70c. per pound at the

middle of September. Coloured cottons averaged slightly higher. Raw silk was higher, a line of Japan silk being up from \$5.90 per pound to \$6.10 and Italian from \$6.15 to \$6.30. Jute was down from 10.15c. per pound to 9.90c. but hessians advanced slightly. Flax fibre was slightly firmer at 28c.-45c. per pound.

HIDES, LEATHER, BOOTS AND SHOES.—Upper leather declined from 36c.-38c. per pound to 33c.-35c.

METALS AND IMPLEMENTS. — Iron and steel were steady. Brass advanced 1c. to 29½c. per pound. Quicksilver was down from \$43 per flask to \$41. Silver rose from 65c. per ounce to 69c. Crowbars were down from \$9 per hundred to \$8.50.

FUEL AND LIGHT. — Anthracite and bituminous coal were steady. Furnace coke at Connellsville advanced from \$3.25 per ton to \$3.50. Gasoline advanced from 31c. per gallon to 32½c. at Toronto. Coal oil advanced from 17½c. per gallon to 20½c.

BUILDING MATERIALS. — Spruce deals at St. John advanced from \$23 per M to \$26. Cement was reduced slightly. Iron pipe, red lead, and sash weights declined. Sash cord advanced from 55c. per pound to 57c. Linseed oil declined from 98c. per gallon to 88c. Turpentine advanced from 95c. per gallon to \$1.15. Benzine was up from 31c. per gallon to 32½c. Glue was down from 32c. per pound to 30c. Putty was down from \$6.05 per hundred pounds to \$5.95.

HOUSE FURNISHINGS.—Kitchen chairs fell 50c. per dozen and kitchen tables 50c. each. Glass tumblers fell 10 per cent, and silver-plated knives 15 per cent.

DRUGS AND CHEMICALS. — Bleaching powder and caustic soda were higher, but brimstone, glycerine, opium and soda ash were lower.

MISCELLANEOUS. — In raw furs, musk-

rat skins advanced from \$1.25 to \$1.50 each. Malt was down from \$1.20 per bushel to \$1.18. Newsprint paper was down to 4c. per pound. Rubber advanced to 21½c. per pound.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE accompanying tables and the following notes give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale price index numbers are named in all cases.

United Kingdom

The *Economist* index number of wholesale prices at the end of September was 223.8 showing an advance of slightly more than 2 per cent as compared with the previous month. The whole of this rise was due to movements in the textiles group, cotton being chiefly responsible. Each of the other groups showed an appreciable decline, the largest being that in cereals and meat.

The *Statist* index number for the end of September registered a new decline, completely obliterating the effect of the slight rise in July. The index for all commodities at the end of September was 149.4 as compared with 154.3 at the end of August, a fall of 3.2 per cent. The September figure was the lowest since October, 1916. Textiles were the

only group which showed an increase, and for this the advance in cotton prices was chiefly responsible.

The *Statist* number for the end of October showed a further decline, falling from 149.4 to 138.4. This represented the lowest level reported for the compilation since the turn in prices came, being almost 50 per cent below the peak of 266.1 reported at the end of April, 1920. All groups contributed to the decline.

The British *Labour Gazette* states that the official index number for retail prices of foods comprised in the food budget which at September 1 was 125 per cent above the pre-war figure, fell during the month of September, so that at October 1 it was only 110 per cent above July, 1914. With the exception of milk, for which very few changes in price were recorded, there were downward movements in the prices of all the principal articles of food. As a result of special inquiries, the average increase in rent from July, 1914, to October, 1921, was estimated at 53 per cent. The increase in all items of cost of living since July, 1914, was placed at 110 per cent, as compared with 120 per cent at September 1.

a. Average for year. b. Quarter beginning in specified month. c. 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1921. d. New index number for 1921 is joined to old for 1920 and preceding years. Old number had 38 commodities. (e) The commodities comprised in these two new index numbers are, in the one case, articles chiefly exported, in the other case, articles chiefly imported.

United States

The *Annalist* index number of whole-sale food prices for October 15, 1921, was 168.470, a decline of 4 per cent from the middle of the previous month.

Gibson's index number of wholesale prices of foodstuffs showed an average of 64.4 for the month of October, a decline of nearly 6 per cent from the preceding month.

Bradstreet's index number of whole-sale prices for November 1 was \$11.3514, marking a gain of 1.4 per cent over October 1, and of 7 per cent from the low point touched on June 1. The decline from the highest point, reached in February, 1920, was about 46 per cent, and the figure for November 1 was about 30 per cent above the level of August 1, 1914. Eight groups of commodities rose in October, while three declined and two remained unchanged, but the only really

marked changes upward were those of provisions and textiles, while breadstuffs showed the only important decline.

Duns' index number of wholesale prices likewise showed a slight rise during the month of October, the figure for November 1 being \$163.665 or 1.1 per cent above the level of the preceding month. Only three of the seven divisions into which this index number is separated disclosed changes of importance during the month. Chiefly as a result of an extension of the decline in wheat prices, the breadstuffs group receded 5.8 per cent last month, and there was a slight yielding in the meat and metals classes. In dairy and garden products, however, an advance of 9.5 per cent occurred, principally because of higher prices for eggs, butter and certain vegetables. The upturn in this division, which entirely accounted for the rise in the index number as a whole was seasonal.

IMMIGRATION DURING THE THIRD QUARTER OF 1921

THE following statements compiled from information furnished by the Department of Immigration and Colonization give details as to the total immigration into Canada during the third quarter of 1921. For purposes of comparison the figures for the previous quarter and for the corresponding quarter in 1920 are also given:—

The table on page 1432 gives the nationality, sex, occupation and destination of all immigrants who entered Canada during the quarter under review:—

FATAL INDUSTRIAL ACCIDENTS REPORTED DURING THE THIRD QUARTER OF 1921

THE Department has received reports of 225 fatal industrial accidents that occurred during the third quarter of 1921. (Information has also been received of 16 additional fatalities that occurred during the previous quarter making a total of 229 fatal industrial accidents during the second quarter). Of the fatalities during the third quarter 89 occurred in July, 69 in August, and 67 in September, while in the corresponding quarter of 1920 there were 102 reported for July, 110 for August, and 104 for September. The distribution of

accidents according to industries showed 48 in the building and construction industry, 39 in steam railway service, and 25 in mining and quarrying, while in the lumbering industry 20 accidents were reported. Twenty-four of the fatalities were caused by moving trains and seventeen were due to electrocution.

The following statement does not necessarily include all the fatal industrial accidents that may have occurred but has been prepared from information received from all sources available.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1921.

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
METALS, MACHINERY AND CONVEYANCES—				
Machinist with street railway company.	Toronto, Ont.	July	5 42	Blood poisoning.
Elevator operator at implement works.	Toronto, Ont.	"	16	Fell off elevator.
Workman at implement works.	Winnipeg, Man.	"	22	Sleeve caught on drill.
Carpenter at car shop.	Point St. Charles, Que.	"	20 58	Caught between drawbars.
Ladleman.	Sydney, N.S.	"	26 54	Burned by molten steel.
Machinist's helper.	Trail, B.C.	Aug.	3 65	Bruised thumb; blood poisoning.
Employee at metal factory.	Toronto, Ont.	Sept.	2 17	Crushed by elevator.
Labourer at machine works.	Orillia, Ont.	"	7	Struck by flying board.
Labourer at car works.	Fort William, Ont.	"	7	Fell from ladder.
Labourer at steel plant.	Sault Ste. Marie, Ont.	"	10	Asphyxiated.
Sander at wagon works.	Brantford, Ont.	"	10	Septic absorption from hip.
			Over	
Blacksmith.	Stettler, Alta.	"	12 21	Electrocuted.
Labourer at metal works.	Port Colborne, Ont.	"	16 40	Explosion.
Patternmaker at steel plant.	Hamilton, Ont.	"	19 36	Explosion of wood-alcohol.
CLOTHING AND LAUNDERING—				
Laundryman at dairy.	Toronto, Ont.	July	5 62	Overcome by heat.
Employee at woollen mill.	Hespeler, Ont.	Aug.	22	Fell from gang plank.
PULP, PAPER AND FIBRE—				
Labourer at pulp mill.	Smooth Rock Falls, Ont.	July	27 30	Electrocuted.
Beaterman at paper mill.	Thorold, Ont.	Sept.	15	Crushed by elevator.
PRINTING AND PUBLISHING—				
Employee at publishing plant.	Winnipeg, Man.	July	25 58	Struck by descending elevator.
WOODWORKING AND FURNITURE—				
Basket maker.	Thessalon, Ont.	July	11	Struck by rolling log.
Employee at factory.	Hamilton, Ont.	Aug.	30 35	Smothered in sawdust chute.
Helper at woodworking plant.	Woodstock, Ont.	"	31	Hit by plank thrown from saw.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1921—Continued

Trade or Industry	Locality.	Date.	Age.	Cause of fatality.
CLAY, GLASS AND STONE—				
Employee of plaster factory.....	St. James, Man.....	July 12	40	Caught by moving pulley.
Superintendent of lime plant.....	Beachville, Ont.....	Aug. 7	34	Electrocuted.
Employee at glass works.....	Ville St. Pierre, Que.....	Aug. 8	45	Run over by coal.
Employees at crushed stone plant (2)	Rosemont, Que.....	" 11	49, 26	Dynamite explosion.
Labourer at cement plant.....	St. Mary's, Ont.....	" 19	Fell from platform.
PAINTS, OILS, CHEMICALS AND EXPLOSIVES—				
Labourer at oil works.....	Toronto, Ont.....	July 28	Burned.
STEAM RAILWAY SERVICE—				
Sectionman.....	Guelph, Ont.....	July 1	29	Struck by train.
Sectionmen (2).....	Napierville, Que.....	" 4	Hand-car struck by train.
Sectionman.....	St. John, Que.....	" 7	Run over by shunting cars.
Sectionman.....	Endako, B.C.....	" 16	60	Run over by engine.
Trainman.....	Westmoreland, Co., N.B.....	" 3	35	Sunstroke.
Engineer.....	Near Madoc, Ont.....	" 13	35	Engine overturned.
Fireman.....	Armstrong, Ont.....	" 6	32	Derailment.
Fireman.....	Near Noso, Ont.....	" 27	39	Derailment due to a washout.
Conductor.....	Valleyfield, Que.....	" 15	61	Fell from moving train.
Checker.....	Toronto, Ont.....	" 7	Overcome by heat.
Porter.....	Prescott, Ont.....	" 7	Fell from train.
Labourer.....	Cobourg, Ont.....	" 15
Labourer.....	Key Harbour, Ont.....	" 22	Crushed by chain when unloading coal.
Gang labourer.....	Saskatoon, Sask.....	Aug. 2	27	Fell from hand car.
Section foreman.....	Neustadt, Ont.....	" 18	Fell in front of hand car.
Sectionman.....	Winnipeg, Man.....	" 20	Crushed between cars while coupling.
Sectionman.....	West Edmonton, Alta.....	" 30	21	Crushed by falling pole.
Fireman.....	Erinview, Man.....	" 3	Slipped under engine.
Signalman.....	Whitby, Ont.....	" 6	Struck by train.
Employees (2).....	Dunvegan Yards, Alta.....	" 11	Collision gas speeder and velocipede.
Coal heaver.....	Stratford, Ont.....	" 14	Fell from tender.
Brakeman.....	Hyde Park, Ont.....	" 15	Run over by train.
Brakeman.....	Mirror, Alta.....	" 16	Fell between couplers.
Roadmaster.....	Ignace Sub., Ont.....	" 21	38	Fell off track motor.
Ash pit man.....	Schreiber, Ont.....	" 22	Fell from pilot of engine.
Constable.....	Orillia, Ont.....	" 25	Crushed between cars.
Section foreman.....	South March, Ont.....	Sept. 2	Speeder struck by train.
Section foreman.....	Wagaming, Ont.....	" 8	Collision of motor cars.
Sectionman.....	McGillivray, Alta.....	" 4	35	Speeder struck by train.
Sectionman.....	Ernestown, Ont.....	" 6	60	Struck by train.
Sectionman.....	Mons, B.C.....	" 26	Struck by speeder.
Labourer.....	Fernie Sub, B.C.....	" 10	63	Struck by train.
Labourer.....	Miniota Sub, Man.....	" 23	Collision of motor and hand cars.
Labourer.....	Vaudreuil, Que.....	" 26	Struck by train.
Brakeman.....	Union Bay, B.C.....	" 7	39	Run over by car.
Employee.....	Crandall, B.C.....	" 23	54	Fell from hand car.
Ash pit man.....	Sault Ste. Marie, Ont.....	" 13	34	Rope broke causing fall from tender.
ELECTRIC RAILWAYS—				
Brakeman.....	Near Thorold, Ont.....	July 12	22	Derailment.
Trackman.....	Thorold, Ont.....	" 25	Struck by automobile.
Motorman.....	Edmonton, Alta.....	Sept. 17	21	Electrocuted; attempted to remove wire without protection.
NAVIGATION—				
Deckhand.....	Quebec, Que.....	July 5	20	Drowned.
Sailor.....	Quebec, Que.....	" 14	21	Fell overboard.
Sailors (2).....	Quebec, Que.....	" 19	21	Drowned.
Oiler.....	Cobourg, Ont.....	" 15	20	Clothing caught in wheel.
Barge employee.....	Quebec, Que.....	" 27	17	Drowned.
Sailor.....	Quebec, Que.....	Aug. 4	24	Fell from scaffold of ship.]
Sailor.....	Montreal, Que.....	" 17	28	Slipped from ladder—drowned.
Cook on schooner.....	Quebec, Que.....	Sept. 26	32	Fell overboard.]

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1921—Continued.

Trade or Industry	Locality.	Date.	Age.	Cause of fatality.
MISCELLANEOUS TRANSPORT—				
Driver.....	St. Jean, Que.....	July 7	41	Fell from wagon.
Driver for dairy.....	Toronto, Ont.....	" 10	Struck by automobile.
Driver for ice company.....	Toronto, Ont.....	" 30	Struck by engine.
Workman.....	St. Anne, Que.....	Aug. 1	Drowned.
Teamster for cartage company.....	London, Ont.....	" 17	Injured spine when unloading.
Teamster for milling company.....	Comber, Ont.....	" 26	Struck by train.
Longshoreman.....	Vancouver, B.C.....	" 16	45	Fell down hatchway.
Loader at steamer.....	Toronto, Ont.....	" 31	Fell from gang plank.
Aviator.....	Lazard Jct., Que.....	" 25	Fall of machine.
Driver for dairy.....	Ottawa, Ont.....	Sept. 19	42	Struck by automobile.
Automobile chauffeur.....	Charlesbourg, Que.....	" 26	24	Automobile struck by train.
MINING AND QUARRYING—				
Miner.....	Stellarton, N.S.....	July 1	42	Fall of coal.
Miner.....	Brule, Alta.....	" 4	Over 21	Cut by saw.
Miner.....	Stellarton, N.S.....	" 6	Over 21	Fall of coal.
Miner.....	Bankhead, Alta.....	" 7	Over 21	Caught between car and stationary motor.
Miner.....	Rambler (Slocan), B.C.....	" 24	55	Fall of rock from hanging wall.
Driver.....	Comox, B.C.....	" 15	40	Crushed by car.
Miner.....	Inverness, N.S.....	Aug. 8	26	Fell down chute.
Miner's helper.....	Comox, B.C.....	" 8	Fall of top coal.
Examiner.....	Little Bras d'Or, N.S.....	" 8	Gas explosion.
Barman.....	Surf Inlet, B.C.....	" 26	34	Struck by rock falling from roof.
Pumpman.....	Springhill, N.S.....	" 26	60	Struck by full rake.
Chute runner.....	Inverness, N.S.....	" 26	36	Struck by empty rake.
Driller at quarry.....	Montreal, Que.....	" 24	32	Rock fell from hoisted box.
Driller.....	Clayburn, B.C.....	" 20	37	Premature explosion while blasting clay.
Manager at quarry.....	Beachville, Ont.....	" 6	Electrocuted.
Stone cutter at quarry.....	Montreal, Que.....	" 16	63	Crushed by falling derrick boom.
Shiftman.....	Springhill, N.S.....	Sept. 3	Run over by full box.
Miner.....	Nanaimo, B.C.....	" 3	Fall of rock.
Mucker.....	Kimberley, B.C.....	" 18	Fall of ore.
Loader.....	Extension, B.C.....	" 19	Struck when brake blew off.
Employee at smelter.....	Vancouver, B.C.....	" 30	Fall of pulley.
Foreman at quarry.....	Sault Ste. Marie, Ont.....	" 13	49	Thrown against barrow by quantity of sand.
Miner.....	Nanaimo, B.C.....	" 13	Fall of rock.
Miner.....	Extension, B.C.....	" 14	Fall of rock.
Rope rider.....	Cassidy, B.C.....	" 14	Jammed between car and door frame.
BUILDING AND CONSTRUCTION—				
Employee with power commission.....	Niagara Falls, Ont.....	July 3	33	Killed by rock slide.
Scaler with power commission.....	Stamford, Ont.....	" 7	35	Fall of rock.
Labourer with power commission.....	Cameron Falls, Ont.....	" 7	Fell from platform.
Labourer with power commission.....	Queenston, Ont.....	" 9	24	Burned by sand.
Labourer with power commission.....	Stamford, Ont.....	" 12	22	Crushed under car.
Driller with power commission.....	Stamford, Ont.....	" 30	Electrocuted.
Carpenter at locks.....	Thorold, Ont.....	" 5	Prostrated by heat.
Carpenter.....	St. Gervais, Que.....	" 6	35	Fell from scaffold.
Repairman, at mill.....	Nottawa Village, Ont.....	" 25	Fell from roof.
Workman at building.....	Montreal, Que.....	" 13	76	Collapse of scaffold.
Workman at building.....	St. Come, Que.....	" 21	Fell from scaffold.
Employee on roads.....	Port Arthur, Ont.....	" 7	Infection of knee.
Labourer on roads.....	St. Prosper, Que.....	" 8	28	Premature explosion of dynamite.
Labourer on roads.....	Almonte, Ont.....	" 29	70	Struck by train.
Workman at bridge.....	Winnipeg, Man.....	" 21	Fell from platform—drowned.
Workman at bridge.....	Cowichan Lake, B.C.....	" 29	21	Fell from deck of bridge.
Employee on railroad.....	Miniota, Man.....	" 23	Struck by falling pile drive leads.
Labourer with power commission.....	Hamilton, Ont.....	Aug. 2	Struck by automobile.
Labourer with power commission.....	Niagara Falls, Ont.....	" 15	28	Dump car overturned.
Pitman with power commission.....	Stamford, Ont.....	" 28	Hit by rock.
Painters (2).....	Peterborough, Ont.....	" 4	Collapse of scaffold.
Painter.....	Montreal, Que.....	" 24	32	Slipped and fell through skylight.
Steam fitter.....	Peterborough, Ont.....	" 11	50	Fell from scaffold.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1921—Continued.

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
BUILDING AND CONSTRUCTION—Cont.				
Workman at building.....	Ottawa, Ont.....	Aug. 13	76	Collapse of scaffold.
Labourer.....	Guelph, Ont.....	" 20	26	Fell while setting brakes on ca —run over.
Employees at dyke (2).....	Chilliwack, B.C.....	" 7	About 30	Electrocuted—Boom of drag lines swung into high tension wire.
Workman at bridge.....	Quebec, Que.....	" 16	28	Fell from bridge.
Carpenter.....	Vancouver, B.C.....	" 19	71	Fell from bridge.
Scowman.....	Sault Ste. Marie, Ont.....	" 9	Drowned.
Bricklayer at pulp mill.....	Mill Creek, B.C.....	Sept. 1	28	While doing repair work, steam and gas were accidentally turned on.
Kalsominer.....	Calgary, Alta.....	" 1	62	Fell from ladder.
Employee at road work.....	Washago, Ont.....	" 2	Dynamite explosion.
Employee at road work.....	St. Albert, Ont.....	" 10	18	Crushed by horse.
Teamster at road work.....	Toronto, Ont.....	" 16	37	Fell from ladder.
Employee at road work.....	Port Joli Road, N.S.....	" 28	Explosion of dynamite.
Painter.....	Paris, Ont.....	" 12	Fell from ladder.
Painter.....	New Westminster, B.C.....	" 14	48	Roof cleat holding stage gave way.
Workman with contractor.....	Victoria, B.C.....	" 7	70	Crushed while lowering house to foundation.
Workman with contractor.....	Halifax, N.S.....	" 27	50	Struck by hopper on concrete mixer.
Workman with contractor.....	Montreal, Que.....	" 22	25	Struck by barrow falling from hoist.
Workman with contractor.....	Chatham, Ont.....	" 24	Fell from roof.
Waterboy with contractor.....	Ottawa, Ont.....	" 27	Thrown from truck.
Carpenter.....	Britannia Beach, B.C.....	" 29	Struck by piece of pulley.
Carpenter with power commission.....	Stamford, Ont.....	" 20	62	Crushed under cars.
Labourer at aqueduct.....	Cote St. Paul, Que.....	" 22	42	Cave-in of earth.
Sign erector.....	Winnipeg, Man.....	" 27	66	Fell from cornice.
LUMBERING—				
River driver.....	Agnone, Ont.....	July 2	23	Drowned.
Employee.....	Lotbiniere, Que.....	" 2	16	Struck by a falling tree.
Employee.....	Madawaska River, Ont.....	" 7	Drowned.
Labourer.....	Fraser Lake, B.C.....	" 7	45	Struck by falling tree.
Labourer.....	Chilliwack, B.C.....	" 26	52	Fell from shingle truck.
Labourer.....	Lefavre, Ont.....	" 26	Drowned.
Rigging man.....	Chancellor Channel, B.C.....	" 7	26	Crushed by rolling log.
Teamster.....	Sherbrooke, Que.....	" 27	35	Drowned. houses fell into hole.
Logger.....	North Vancouver, B.C.....	" 15	Fell on axe.
Logger.....	Laforest, Ont.....	Aug. 6	Crushed by logs.
Logger.....	Crofton, B.C.....	" 26	21	Crushed by rolling logs.
Mill hand.....	Chemanus, B.C.....	" 18	26	Caught in belt.
Sawyer.....	Fernie, B.C.....	" 19	26	Struck by falling tree.
Mill worker.....	Restigouche, N.B.....	" 19	48	Struck by slab.
Lumberman.....	Fernie, B.C.....	" 21	Struck by falling tree.
Bushman.....	Massey, Ont.....	" 28	Drowned.
Loading engineer.....	Abbotsford, B.C.....	Sept. 2	42	Struck by log.
Edgerman.....	Tionaga, Ont.....	" 19	24	Struck by log.
Labourer.....	Michel, B.C.....	" 19	22	Struck by timber.
Loader.....	Ottawa, Ont.....	" 23	(No particulars).
PUBLIC UTILITIES—				
Pitman with power commission.....	Stamford, Ont.....	July 2	30	Cave-in of bank.
Employee with power commission.....	Abitibi River, Ont.....	" 7	Drowned.
Workman with power commission.....	London, Ont.....	" 8	Electrocuted.
Foreman with power commission.....	Thamesford, Ont.....	" 11	37	Electrocuted.
Lineman with power commission.....	Niagara Falls, Ont.....	" 14	28	Electrocuted.
Employee with power commission.....	Niagara Falls, Ont.....	" 15	29	Electrocuted.
Lineman with power commission.....	Toronto, Ont.....	" 18	36	Electrocuted.
Lineman with power commission.....	Arthur, Ont.....	" 19	Fell from pole.
Labourer with power commission.....	Toronto, Ont.....	" 22	Electrocuted.
Electrician.....	Woodbridge, Ont.....	" 12	Electrocuted while putting new fuse in transformer.
Electrician.....	Cooksville, Ont.....	" 31	Fell while putting new fuse in transformer.
Telephone man.....	Sulphide, Ont.....	Aug. 1	Electrocuted.
Lineman.....	Montreal, Que.....	" 13	Electrocuted when wire fell.
Handyman with power commission.....	Queenston, Ont.....	Sept. 7	Caught in wheel belt.
Employee with gas works.....	Ottawa, Ont.....	" 21	Caught in machinery.
Labourer with power commission.....	Walkerville, Ont.....	" 29	Electrocuted.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF, 1921—Continued

Fire ranger.....	Grant, Ont.....	" 11	11	Drowned.
Top foreman.....	Taber, Alta.....	" 13	21	Tractor overturned while ploughing.
Bucker.....	Rock Bay, B.C.....	" 13	68	Struck by falling limb.
Teamster.....	Kakabeka Falls, Ont....	" 14	59	Runaway team.
Miner.....	Comox, B.C.....	" 29	50	Fall of cap rock.
Railway employee.....	Minaki, Ont.....	" 21	21	Shock; due to scalding from steam.
Labourer.....	Morrisburg, Ont.....	" 21	21	Explosion.
Labourer.....	Calgary, Alta.....	" 25	21	Run over by railroad car.
Labourer.....	Glace Bay, N.S.....	" 29	29	Struck against boom.
Labourer (municipal).....	Fairmount, Ont.....	" 23	60	Cave-in of earth.

RECENT LEGAL DECISIONS AFFECTING LABOUR

TWO of the legal decisions summarized below deal with various aspects of the Workmen's Compensation Law of

Quebec. The third relates to a claim for damages for violation of an agreement.

A labourer employed by city to load carts and sweep roads does not come within scope of Quebec Workmen's Compensation Act

A labourer employed by the city of Westmount, Que., was struck on the head by a street car when working on a road. He brought action against the municipality under the Workmen's Compensation Act of Quebec, claiming \$507 for wages, and a sum of \$2,800, the capital of an annual rent of \$165.35. On behalf of the defendant municipality the plea was made that the plaintiff was not employed in any business or industrial enterprise nor connected with any department of the city of Westmount, and had therefore no claim against the city under the Workmen's Compensation Act. In the plaintiff's declaration it was alleged that the municipality carried on its industrial operation by the aid of power other than that of man or animal and that the plaintiff met his accident while working on the defendant city's property, shovelling material used for paving and throwing it in a wagon.

It was held by the Superior Court that the work did not come within the clause of the Act, which includes business having for its object the building, repairing or maintenance of railways, tramways,

waterworks, drains, sewers, dams, wharves, elevators or bridges, because roads are not mentioned in that clause. Nor did the fact that the defendant city owned a macadam mixer which was operated by steam in its own yard imply that, in sweeping the street on which stone had been delivered to the defendant city, the plaintiff was engaged in an industrial enterprise conducted by the city. The Court declared that "the Workmen's Compensation Act is a law of exception and it must be clearly shown by the person claiming relief that the act is applicable to his case, and where it is not clearly shown or where a doubt exists plaintiff must fail." It was held by the Court that the plaintiff had failed to show that the Workmen's Compensation Act applied and there was nothing on record to justify his conclusions. The Superior Court dismissed the plaintiff's action with costs.

This judgment was affirmed by the Court of Review on appeal.

(*Quebec — Nicholaichook vs. City of Westmount.*)

A workman injured when doing another man's work with tacit consent of employer may recover damages in Quebec

An employee in a handle factory at Bedford, Que., lost the thumb of his left hand when at work. He brought action against his employer under the Workmen's Compensation Act of Quebec. The defendant company claimed that at the time of accident the plaintiff was doing

work which he was not required nor permitted to do, having taken the place of a fellow worker without order or permission, and that the accident was due to the plaintiff's inexcusable fault. The Superior Court dismissed the action on the grounds that under the terms and

conditions of the Act and from its interpretation, the presumption of fault is against the employed to whom the law practically states "We presume you must have been at fault, or there would have been no accident"; that the law requires proof of the accident as to when, how and where and under what circumstances the accident took place, and unless plaintiff makes such proof, it is absolutely impossible to render judgment in his favour; and that while the plaintiff under the Workmen's Compensation Act need not allege or prove negligence on the part of the defendant, it is most necessary and essential that he should prove where, when and how the accident took place and all the circumstances connected therewith.

On appeal to the Court of Review the decision was reversed, the Court holding

that the plaintiff was earning \$800 a year; that he was injured when at work for the defendant; that when the accident happened several hours had already passed since he had taken the place of another worker, and consequently he was doing the work with the tacit consent of his employer; that it was not necessary to prove how the accident occurred, it was sufficient to prove that he had been injured when at his work.

The Court considered that the plaintiff had suffered a permanent diminution of one-fiftieth capacity and ordered the defendant company to pay him the sum of \$80 per year, the right being reserved to the plaintiff of having this annual rent converted into a capital sum.

(*Quebec — Cookman vs. The Bedford Manufacturing Company*).

An injured employee discharged contrary to agreement cannot be awarded damages without proof of loss

In 1912 a workman broke his arm when working in a factory shop. He then entered into an agreement with the company employing him that in consideration of the company paying his doctor's and hospital account, and promising to give him steady work so long as his services continued to be satisfactory to the superintendent, he released and discharged the company from all actions, claims and demands by reason of the accident. Five years later this employee was dismissed without cause. He brought an action in the Superior Court of Quebec against the company for non-fulfillment of contract, claiming \$6,000 damages. The Court held that the company had dis-

missed this workman without valid cause and since that time had been in default of honouring its obligation to provide him with employment. The damages were fixed by the Court at \$1,200.

An appeal was taken to the Court of King's Bench. In the judgment of this Court it was stated that the defendant company had made the plea that the accident was due to the inexcusable fault of the plaintiff workman, that the agreement of July, 1917, was irregular, illegal and insufficient in law, and that the plaintiff had of his own free will consented to leave the company's service, and, moreover, he had earned elsewhere more than his earnings when

he was with them. The Court held that if the plaintiff's dismissal had been prejudicial to him the defendant would have been responsible, but the plaintiff employee had not proved any damages. As he had worked for various employers since his discharge and had received higher wages than the defendant company had paid him, while at times he was out of employment, it was impossible to say definitely whether he had

had a gain or loss. As the indemnity of \$1,200 which the court of first instance awarded to the plaintiff was not based on proof but rested rather on an arbitrary basis the Court sustained the appeal of the defendant, reversed the judgment of the Superior Court and dismissed the claims of the plaintiff with costs against him in both courts.

(*Quebec — Gagnon vs. Canada Cement Company*).

THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE GIDEON D. ROBERTSON.
DEPUTY MINISTER—F. A. AGLAND.

Volume 21

DECEMBER, 1921

Number 12

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

This issue of the **LABOUR GAZETTE** contains the usual monthly statements on strikes, prices, employment conditions, conciliation proceedings, recent wage agreements, and wage changes. It contains also reports of recent trade union conventions, a summary of recent orders of provincial Minimum Wage boards, articles on the work of the Manitoba Joint Council of Industry, the constitution of the building guilds in Great Britain, the action of the British Government on the International Labour conventions, action of the government of India on labour problems, and other matters of industrial interest.

At the beginning of November the percentage of unemployment among members of trade unions stood at 7.4 as compared with 8.5 at the beginning of October and with 6.1 at the beginning of November, 1920. A great deal of reduced time was again indicated by many of the locals making returns. According to reports received from over 5,000 employers, employment showed a considerable contraction during November as compared with the preceding months and also as compared with the corresponding period of last year.

The average cost of the weekly family budget of 29 staple foods in some 60 cities was \$11.08 at the beginning of November as compared with

\$11.48 at the beginning of October; \$15.32 in November, 1920; and \$7.96 in November, 1914. The cost of food, fuel and rental averaged \$21.60 for November as compared with \$22.01 for October; \$26.13 for November, 1920, and \$14.25 for November, 1914.

The time loss due to industrial disputes during November was greater than during either October, 1921, or November, 1920. There were in existence at some time or other during the month 18 strikes, involving 3,950 workpeople and 98,100 working days. On November 1 there were on record 16 strikes affecting 1,950 workpeople. Two strikes were reported as having commenced during November. One of the strikes commencing prior to November was reported terminated, leaving 17 strikes, involving about 3,919 workpeople on record at the end of the month.

Proceedings under the Industrial Disputes Investigation Act

During the month of November the Department received a report from the Board of Conciliation and Investigation established to deal with the dispute between the Grand Trunk Railway Company and certain of its employees, being clerks, freight handlers, roundhouse and shop labourers, station employees, etc., members of the Canadian Brotherhood of Railroad Employees.

Three applications were received for the establishment of Boards and chairmen were appointed in connection with two Boards which had been established during the previous month.

A report was also received from the Board of Arbitrators established to deal with the dispute between the Intercolonial and Prince Edward Island National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees.

Jottings

The Department of Labour has published its first report on "Organization in Industry, Commerce and the Professions in Canada." Organization on the part of Canadian employers has advanced very considerably in recent years, and fuller information on the subject is now continually in demand. The report is intended to be supplementary to the report on "Labour Organization in Canada," which has been issued annually by the Department for some years.

It is reported that there are at present 500 persons in training in the first-aid classes being conducted by the Workmen's Compensation Board in the various industrial centres of Alberta.

Short courses of instruction on internal combustion engines, including automobiles, will be held under the direction of the Saskatchewan Department of Agriculture at the College of Agriculture, Saskatoon, from November 28 to December 17, 1921; from January 3 to January 21, 1922; and from February 6 to 25, 1922.

The Police Association of Hamilton, Ont., have requested the Ontario government to amend the Workmen's Compensation Act to bring police officers within its scope.

The Board of Health of Hamilton, Ont., has gone on record as favouring minimum wage for the various trades,

the Medical Officer of Health having presented a report in which he traced the considerable amount of sickness and disease prevailing in the city to the inability of the poorer families to buy the necessaries of life.

The Public Safety Committee of Winnipeg recently recommended to the City Council to petition that immediate effect be given to the Provincial act of 1913 prohibiting the employment of women in restaurants or stores kept by orientals. This act, which is to come into force on proclamation, has not yet been proclaimed. New legislation, it is stated, will be required to deal with the employment of women by orientals in "free admission parlours."

The civic committee on insurance at Ottawa, Ont., recommends that provision be made in the 1922 estimates for group insurance of all civic employees except policemen and employees of the Fire Department who have their own insurance benefits. There will be 235 employees to come under the scheme, the cost of which is estimated at about \$12 per \$1,000 of insurance.

At the fourth annual convention of the International Association of Fire Fighters recently held at Columbus, Ohio, the president stated that in February, 1918, the two-platoon system was in force in only 32 cities of the United States and Canada, whereas to-day two-platoon, and in some instances three-platoon, systems were in force in some 500 cities of the United States, Canada, the Canal Zone and possessions of the United States.

At the annual meeting of the United Typothetæ of America, representing about 5,000 printing plants in Canada and the United States, which met at Toronto in October, plans for apprentice training were discussed with a view to securing a continuous supply of competent journeymen printers. In establishing the course of training suggested, employers were recommended to co-

operate with the educational authorities in their respective communities. It was stated that in Buffalo such co-operation had been brought about, and printers' apprentices there attend the technical school two evening sessions in their own time and one afternoon session in their employers' time.

In June last, there was held at Sydney, New South Wales, an organization meeting to inaugurate a Safety First Association. A committee was appointed to draft a constitution and by-laws. The meeting was under the chairmanship of the Minister of Labour, Industries and Mines, the departments which are responsible for various acts having to do with the safety of workers.

The German cabinet recently sent to the Reichstag a bill legalizing an 8-hour working day. Similar action had previously been taken with reference to several of the other draft conventions and recommendations of the first International Labour Conference at Washington.

The Japanese press states that the government of that country has decided to subsidize a company known as the Overseas Enterprise Joint Stock Company for the purpose of encouraging emigration, and has arranged that the Company shall make known in Japan, by means of propaganda, the conditions of employment prevailing overseas, etc. The government has issued instructions to the various police authorities requiring them to give all possible help to emigrant families intending to settle in the coffee plantations in Brazil, the place that has been chosen as the most fitting for this purpose.

The following gentlemen have been elected as vice-presidents of the International Labour Conference: C. da Silva Braga, government delegate from Brazil; J. S. Edstrom, employers' delegate from Sweden; and Leon Jouhaux, workers' delegate from France.

Mothers' Pensions proposed in Quebec

Women's organizations in Montreal have under consideration a bill for Mothers' Pensions which may be presented at the session of the Quebec provincial legislature opening on January 10, 1922. According to the *Montreal Star*, pensions for mothers have strongly advocated in that city for a long period. "Over two years ago," the newspaper states, "the Charity Organizations started to maintain a number of widows with families as a practical test in mothers' pensions, and this was done up to spring of this year. Then when that body re-organized, French, English and Jewish organizations undertook the care of people of their own race, and were still carrying on pending the passing of Mothers' Pensions." The mayor of Montreal is reported as saying in reply to a recent delegation of representatives of women's organizations on behalf of a pension scheme, that he did not believe that mothers' pensions would in the long run be much more expensive to the city than the present state of things. At present the city was paying for the maintenance in the various institutions of many hundreds of children at the rate of about \$9 to \$11 per month for each child.

Manitoba Workmen's Compensation Act amended

At the last session of the Manitoba legislature, in addition to the labour legislation which was reviewed in the *LABOUR GAZETTE* for October last, an act was passed amending the Workmen's Compensation Act, the main amendments being as follows:

The maximum amount of burial allowance is raised from \$100 to \$150. The limit of \$60 a month, which was fixed by the Act as the maximum total compensation for a widow, or invalided widower, with one or more children, is removed. The limit of \$60 is also removed as the maximum amount of payments which may be made to a family of orphan children. The minimum weekly compensation in cases of perma-

ment total disability is raised from \$6 to \$15. Where an accident happens to a workman in the course of his employment under such circumstances as to entitle him or his dependants to an action against some person other than his employer, no compromise settlement by the workman or his dependants, at an amount less than the compensation provided for by the act, shall be made without the approval of the Workmen's Compensation Board. Commencement of such action at law shall be tantamount to the filing of a claim for compensation. Where an injured man, however, is in need of immediate care, but has not filed a claim, the Board may direct that such care be given, the cost to be a charge against any sum recovered by the injured man in any such action brought by him. Where a person carrying on an industry contracts with another person for the execution of part of the work, the former is liable to pay workmen's compensation in connection with the work contracted out, if the immediate employer has failed to provide protection under the act for his workmen. Any employer in an industry within the scope of the act may be admitted by the Board as being entitled for himself and his dependants to the same compensation as if the employer were a workman. The foregoing amendments to the Act were made retroactive to January 1, 1921.

**British
Columbia
Superannua-
tion Act**

A voluntary and contributory scheme for the superannuation of employees in British Columbia was initiated

by the Superannuation Act passed during the past year by the Provincial Legislature. The act provides that any provincial civil servant, or municipal or school board employee may come within its scope; also that the benefits of the act may be obtained for the employees of any industrial establishment by the employer and any group of his employees entering into an agreement to that effect and filing same with the Civil Service Commission. The Superannuation fund is composed of contributions

from the workers and an equal amount from their employers and is under control of the Provincial Minister of Finance. Female contributors, on attaining the age of 55 years, and males, on attaining the age of 60, or those who are incapacitated from proper performance of their duties, are entitled to receive superannuation benefits on application, or if retired from service by a competent authority.

Employees' contributions, equal in amount to 4 per cent of wages, or more in certain cases, are deducted from wages and are forwarded by the employer to the Treasury Department, together with the employer's own contribution, which equals the aggregate amount of his employees' contributions. Special voluntary contributions beyond the amounts thus deducted from salary may also be made to the Minister of Finance directly by any contributor. Interest at the rate of five per cent shall be added semi-annually by the Minister of Finance.

When a contributor becomes entitled to a superannuation allowance, the amount he will receive is equal to the sum to which the amount at his credit in the Superannuation Fund, together with a like amount taken from his employer's account, would entitle him according to the prescribed tables then in force. Superannuation allowances may follow any of the following plans: (a) single life, payable for the life of the contributor; (b) guaranteed allowance, payable for the life of the contributor or for a term of years certain, whichever period shall be the longer; (c) joint life and last survivor, payable during the joint life of the contributor and any person nominated by him prior to the granting of the allowance, and during the life of the survivor.

If a contributor dies before he has been granted an allowance, the amount at his credit may be paid to his legal representatives. If he is dismissed or resigns from service, the amount at his credit may be paid to him on application.

Separate sections of the act contain the regulations governing the granting of superannuation allowances respectively to provincial civil servants, municipal and school board employees, and employees of private industrial concerns.

Board of Conciliation for school teachers and trustees in Alberta

A board of conciliation is provided under the Act to Amend the School Ordinance, passed at the last session of the Alberta legislature to settle or prevent disputes between school trustees and their teachers. The Act provides as follows:

(1) Whenever it is made to appear to the Minister that any disagreement or dispute between any board of trustees and their teacher or teachers has arisen or may arise, where such disagreement or dispute in the opinion of the Minister relates to the proper carrying out of the contract entered into between the board of trustees and such teacher or teachers, the Minister may appoint a board which shall be known as a "Board of Conciliation" to inquire into and investigate any such disagreement or dispute, and to make such report thereon as is just and reasonable, and in the conduct of such investigation said board may take evidence under oath or upon affirmation. Provided, however, that no board of conciliation shall have power to intervene in connection with negotiations between any teacher and a school board with respect to any new contract or any extension or amendment or renewal of any contract already in existence.

(2) Every such board of conciliation shall consist of three members, one representing the school trustees of the province, one representing the school teachers of the province, and the chairman of the board who shall be neither trustee nor teacher.

(3) The members of a board of conciliation shall receive such remuneration as the Lieutenant Governor in Council may determine.

Association of Workmen's Compensation Boards

The third annual convention of the Association of Workmen's Compensation Boards of Canada was held at St. John, N.B., on October 3 to 5. Members of all the provincial boards in the Dominion were present, representing every province ex-

cept Quebec and Prince Edward Island. The chief matters dealt with were the adoption of a uniform schedule of rating for all disabilities, and the use of a uniform method of compiling statistics. A committee was appointed to consider the question of ratings for permanent partial disabilities, and on the presentation of their reports various ratings were suggested, one of which was recommended by the convention for the guidance of the provincial Boards. A committee appointed to consider the adoption of a uniform standard for statistics reported in favour of the adoption of a uniform system in all the jurisdictions so far as consistent with local policy and the centralization of the work of tabulating and collecting information. This report was adopted, and Mr. T. N. Dean, statistician of the Ontario Board, was appointed statistician of the Association whose duty it would be to compile standard tables for the use of Canadian boards. The following officers were elected for the ensuing year: president, J. A. Sinclair, St. John, N.B.; vice-president, J. Stirling, Edmonton, Alberta; secretary, J. L. Sugrue, St. John, N.B.; additional member of the executive, E. H. S. Winn, Victoria, B.C. Edmonton, Alberta, was chosen for the meeting place of the Association in 1923.

Civic wage reductions in western cities

Representatives of various Saskatchewan and Alberta cities, at a conference at Medicine Hat on November 2, decided to recommend a reduction in the wages of civic employees for 1922 of 32 per cent on the increase of 1921 salaries over 1914. This will mean a net reduction of from 7 to 15 per cent on present salaries. The city of Regina was not represented at the conference as its council did not favour a reduction at the present time. In Calgary, one of the cities endorsing the plan, this would involve a reduction of about \$96,000 from the general payroll of \$965,855, which will represent a trifle less than one mill of the present tax rate.

Other resolutions adopted at the conference called for a sickness insurance scheme, the employees to contribute a percentage of the premium; two weeks' holidays with pay for hourly employees working $5\frac{1}{2}$ days a week, provided they have had two years' continuous service in the city's employ; two weeks' holidays with pay for hourly employees working six days a week, with one year's continuous service: non-payment of hourly employees for statutory holidays on which they do not work. The question of old age pensions was referred to the Unions of Alberta and Saskatchewan municipalities for consideration.

It is reported that at a subsequent conference of representatives of civic employees in Alberta it was decided to invite the civic employees in the province to oppose the reductions.

Overtime dispute in British textile trade

A recent dispute respecting overtime in the the wool textile industry in Great Britain has certain unusual features of interest. Some two years ago the 48-hour week was introduced throughout the industry, and it was arranged that where overtime was desired the National Wool and Allied Textile Industrial Council should be notified. Recently owing to a partial revival of activity in the industry, certain of the employers secured such orders as to necessitate the working of overtime to effect the delivery in the time required. The workers' representatives on the industrial council, together with the trades unions concerned, were unwilling to agree to the working of overtime by women and children, and, further, contended that no overtime ought to be worked by any firm whilst so many firms were working on short time. In face of the existing lack of business, they asserted that no firm should take more orders than their machinery could cope with while running at 48 hours a week within the time allowed for delivery. They contended, moreover, that it was dangerous to have so many workers unemployed while others were working

overtime. The employers argued that many of the orders already received would not be proceeded with if their application for overtime was refused. The industrial council failed to agree and the application was not granted.

Formation of new guilds in Great Britain

The Daily Herald, London, reports that in addition to the furniture guild recently established at Manchester, local furnishing guilds have been established at London, Norwich, Bristol, Cardiff, Bromley and Preston by committees representative of every section and union of furniture workers. The Guild of Clothiers (London) Ltd., is now operating at 54A Bedford Street, Commercial Road, London, E.1. A tailoring guild employing at present about fifty workers has also been opened at Glasgow under the control of the Tailors' and Garment Workers' Union. Manifestos issued by these guilds state that the guild idea will mean to the workers concerned 52 weeks' maintenance per year, including holiday and sickness periods, and that all those people between the producer and the actual user shall ultimately be eliminated, thus giving to the workers complete control of the industry, to exploit it for use and not for profit. It is further stated that the guilds hope to produce the best trade union furniture and clothing at prices substantially below those usually charged. It is also reported that an Irish Guild of Builders has been formed in Dublin with the full backing of the trade union organizations.

British engineers accept further wage reductions

The result of the recent ballot of members of the engineering and shipbuilding trade unions in the United Kingdom on the withdrawal of the "munitions bonus" is as follows: For withdrawal, 170,471; against withdrawal, 147,636; a majority for withdrawal of 22,835. According to the *London Times*, this vote means the acceptance of a proposal to reduce wages by $12\frac{1}{2}$ per cent on the total earnings of

the time workers and $7\frac{1}{2}$ per cent on those of piece workers, in three instalments to come off in November, December and January respectively. The average amount of the reduction involved is about 9 shillings per week. This follows a reduction of about 6 shillings per week in July last. The number of votes recorded is said to be a very small proportion of the total union membership affected.

Japanese employers request labour legislation

At a recent meeting of the Osaka (Japan) Industrial Society, an organization including the most important employers in that city, it was decided to petition the Japanese government to take immediate steps to enact the requisite laws and regulations and to make provisions on the following matters: (1) The establishment of a labour department; (2) The enactment of a labour union law; (3) The enactment of laws on social insurance; (4) The establishment of a court for dealing with labour disputes; (5) The establishment of a system of pensions; (6) The establishment and encouragement of public works; (7) Increase in the number of public employment exchanges; (8) Encouragement of the housing societies by the lending of money at low interest.

Regulation of apprenticeship in Saxony

A conference of vocational continuation schools was held recently at Riesa, Saxony. The agenda included the question of the regulation of conditions of labour for apprentices. The conference was attended by representatives of commerce, industry, the trade unions and the Ministry of Education. The following principles were laid down to serve as a guide

to the governments in drafting regulations: (1) Conditions of labour for apprentices should be fixed by a special law; (2) The apprenticeship contract should be educational in character; (3) Vocational training should include instruction in continuation classes; this should be simultaneous with practical apprenticeship training; (4) Practical instruction should be systematic; there should be a syllabus for each year of apprenticeship. Vocational continuation schools should take this syllabus into consideration; (5) Continuation classes should be held during the day and on week days. Hours of attendance at school should be deducted from hours of work; (6) Apprentices should be compelled to do the home work set by the school; (7) The retention of pay due to apprentices should be forbidden absolutely; (8) Apprentices' wages should be sufficient to enable them to buy the necessary scholastic material; (9) Apprentices should be entitled to annual holidays during their apprenticeship; as far as possible such holidays should coincide with the holidays of the continuation school; (10) At the close of the period of apprenticeship a so-called "journeyman's examination" should be held in accordance with statutory regulations. The theoretical part of the examination should be conducted by the vocational school; (11) "Trade Advisers" should be attached to the continuation schools. The functions of these advisers should include examination for proficiency in a particular trade; (12) The organizations concerned in the regulation of apprenticeship should collaborate. Joint bodies representing employers, workers and the school should deal with all questions relating to apprenticeship.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

I.—The Labour Market, Strikes, Prices

The Labour Market

The curve of employment based on returns from employers showed a slightly downward tendency during November; the improvement indicated at the beginning of the month was not maintained and a pronounced contraction in employment was recorded in the latter part of November. Employment was still much below the level of the corresponding period in 1920. Trade unions reported a somewhat more favourable situation at the commencement of November than at the beginning of October, showing about one per cent less unemployment. There was a large decrease in the volume of business transacted by the offices of the Employment Service during October; the number of applicants registering, placements effected and vacancies notified by employers all showed pronounced declines. These contractions partly indicated reaction from heavy harvest demands during September.

Weekly reports from employers to the Dominion Headquarters of the Employment Service of

EMPLOYERS' Canada for the period
REPORTS October 9 to November

19 showed a net decline in the volume of employment, increases in activity during the first four weeks of the period being more than offset by a considerable contraction in the last two weeks. Employment continued about fourteen points lower than during the corresponding period of 1920. There was important expansion during the six weeks under review in logging and retail trade, but more substantial decreases were recorded in sawmills and railway construction. Ontario was the only province to show a net increase during the six weeks, while the declines in Quebec and British Columbia were the

largest. All districts, except Quebec, reported fair sized increases in employment during the fortnight ending October 22; for the period ending November 5 the Maritime provinces, Quebec and British Columbia registered contraction, while for the final fortnight of the period under review reductions in activity occurred in every section of the country. All districts continued to show considerable shrinkage in employment in comparison with the corresponding period of last year.

The logging industry recorded pronounced expansion of a seasonal character during the whole period, over 6,100 persons having been dispatched to the bush since the first week in October. These gains were especially marked in Ontario, but towards the latter part of November improvement was reported also in Quebec, New Brunswick and the western provinces. Retail stores added largely to their sales forces, an indication of the commencement of Christmas activity. Coal mining afforded more employment, particularly in Alberta, this also was a seasonal movement. Abattoirs, meat packing, boot, shoe, leather, musical instrument, rubber, pulp, paper, textile, glass and cement factories and telegraph operations were more active, although the gains in employment were not nearly as marked as those recorded in logging and retail trade. Ontario and Quebec absorbed the greater part of the increases in the manufacturing industries. Very pronounced shrinkage was reported during the six weeks under review in railway construction and maintenance from which approximately 5,200 persons were released from employment. These declines, which were entirely seasonal in character, paralleled those of about the same magnitude which were registered during the same

period in 1920. Sawmills also continued to show marked seasonal reductions in staff with losses affecting about 3,500 persons. Ontario firms recorded the greater part of the decreases in sawmills, while the larger share of the contraction in railway construction and maintenance occurred in the prairie provinces. Declines on a smaller scale were reported in iron and steel products (mainly in car manufacturing and shipbuilding), in railway and water transportation, building construction, hotels and restaurants, telephones, tobacco, electric current and apparatus manufacturing. The contraction in hotels and restaurants, tobacco, building construction, telephones and electric apparatus manufacturing continued a downward movement commenced in September. The greater part of the decreases occurred in Ontario and Quebec.

A very unfavourable situation as compared with the corresponding period of last year continued to be shown in a large number of groups. In leather products, coal mining, local and water transportation and highway construction, however, improvement in that comparison was recorded. Especially large contractions in employment were reported in the lumber, iron and steel, pulp and paper, clay, glass and stone, and non-ferrous metal products. Logging, in spite of the very substantial gains recorded during the last four months, continued below the level of last year, as did also railway construction, trade and mining as a whole.

Unemployment as reported by trade unions at the beginning of November showed a further slight decline as compared with the preceding month. This improvement main-

TRADE UNION REPORTS
tained the favourable trend which employment for organized workers has exhibited since April, and indicated that a situation prevailed that was more analogous to that of November of last year than any comparison between two corresponding months of 1920 and 1921

had previously shown. (Unemployment as used here has reference to involuntary idleness due to economic causes; persons occupied in work other than their own trade, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to those unions reporting.) The slight increase in activity as compared with the preceding month was almost wholly accounted for by increased employment for workers in the mining and transportation groups; the improvement in the latter was particularly noteworthy among steam railway employees. Both of these divisions, however, reported considerably more slackness than in November, 1920, as did also tradesmen in building and construction. Employment for trade unionists in the Maritime Provinces, Quebec and Ontario was in greater volume than at the beginning of October, while a reverse situation was reported in the four western provinces. There was slightly less activity in every district except British Columbia as compared with the corresponding period of 1920. In British Columbia there was about two per cent less unemployment.

Statements were tabulated from 1,552 labour organizations with an aggregate membership of 174,336 persons, of whom 12,940 were out of work at the beginning of November, a percentage of 7.4 as compared with 8.5 in the preceding month, and with 6.1 at the beginning of November of last year. The manufacturing and mechanical industries as a whole showed slight improvement as compared with the preceding month, largely attributable to increased activity in the metal group. The printing and pulp and paper trades also were somewhat busier. On the other hand, leather, wood and furniture workers were not as fully employed. The situation in the

clothing trades remained practically the same as in October. In the transportation group there was approximately two per cent less unemployment; steam railway employees, partly on account of the movement of grain, showed a smaller percentage of idleness than in any previous month in 1921. Navigation workers also reported improvement though street and electric railway employees and teamsters and chauffeurs were hardly as actively employed. Coal mining in Nova Scotia and Alberta was brisker and less unemployment was reported by asbestos miners in Quebec. A large number of mines in both coal fields continued to show greatly reduced time. Slightly less activity was registered by tradesmen in building and construction; the increase in unemployment occurred principally in the western provinces, although marked slackness was reported throughout the country. Carpenters and joiners, granite and stone cutters, painters, decorators and paper hangers were less fully employed than in October. On the other hand, bricklayers, masons and plasterers and electrical workers recorded smaller percentages of idleness. Fishermen and logging and lumber workers in British Columbia indicated increased slackness. Hotel, restaurant and theatre employees also were less fully engaged. Retail clerks, barbers and stationary engineers and firemen, however, reported a somewhat more favourable situation than in the preceding month.

The business transacted by the offices of the Employment Service of Canada during the period September 26-October 22, 1921, was considerably less in volume than during the preceding four-week period. To some extent this decrease was the reaction from the heavy demands of the previous weeks, when harvesters and thresher hands were required in considerable numbers in the prairie provinces. When the totals for the four weeks under review are compared with those for the four weeks ended October 23, 1920, re-

ductions are apparent in the number of vacancies offered and positions found. Applications for employment showed an increase over the corresponding period of last year, but a marked decline was shown in the volume of employment offered, there being a contraction of about 36 per cent from the vacancies registered in the previous report, and of about 6 per cent from the corresponding period of last year. There was a considerable falling off in the number of placements effected, the reports indicating a decline of approximately 38 per cent from the report of the preceding period and of about 25 per cent from the corresponding period of 1920.

During the period under review the offices reported that 22,996 placements (of which 20,472 were of men and 2,524 of women) were effected. Placements reported during the preceding period totalled 36,932, and during the corresponding period of last year they numbered 30,818. In addition 7,386 placements in casual employment (one week or less) were effected during the period, as compared with 6,473 during the preceding four-week period, and 6,619 during the corresponding period of 1920. Vacancies notified by employers to the Service numbered 36,089, as compared with 56,114 reported during the preceding period, and 38,429 during the corresponding period of 1920. Of the vacancies reported during the period under review 27,813 were for men and 8,276 for women. Applications for employment registered at the offices totalled 41,299, (32,673 from men and 8,626 from women) as compared with 53,038 applications during the preceding period and 37,419 during the corresponding period of last year.

Employment in the building trades, as indicated by the value of the building permits issued in 56 cities showed slightly less activity during October than in September; the value declined from \$9,988,147 in September to \$9,248,469 in October, a contraction of slightly more than seven

per cent. The value for October was also less than for the corresponding period of last year, there being a decrease of approximately four per cent in that comparison. New Brunswick and Ontario were the only provinces to register gains in the volume of building contemplated as compared with the preceding month, while Quebec recorded the largest decline. As compared with October, 1920, Quebec, Saskatchewan and British Columbia reported increases in the value of the permits issued, the expansion of \$1,651,968 or about 170 per cent in the first named being the most pronounced. Ontario, with a contraction of about 23 per cent, recorded the most marked recession in this comparison. Of the larger cities, Toronto, which issued permits valued at over two million dollars, showed an increase in the amount of building contemplated during October as compared with September; the total for the corresponding month of last year, however, was approximately \$800,000 larger than in the month under review. On the other hand, Montreal authorized less building than in September, but the value of the permits issued was substantially larger than in October of last year. Winnipeg and Vancouver indicated decreases in the amount of building anticipated as compared with both September, 1921, and October, 1920. Of the smaller centres, St. John, Quebec, Fort William, Galt, Nanaimo, New Westminster and Prince Rupert registered gains in both comparisons.

According to the *Canadian Building Review* issued by MacLean's Building Reports Limited, the value of the contracts awarded during October totalled \$18,997,200 as compared with \$19,565,700 in September, 1921, and with \$18,169,500 in October of last year. An analysis of the returns by districts shows that contracts to the value of \$542,900 were awarded in the Maritime Provinces; Quebec and Ontario reported \$14,362,100 or about seventy-six per cent of the total, while in the four western provinces the value of the contracts awarded aggregated \$4,092,200.

Of the total for October, \$7,241,900 was to be spent on residences, \$5,014,900 on business establishments, \$1,616,600 on industrial buildings and \$5,150,800 on engineering contracts.

Strikes

The loss of time on account of industrial disputes during November was greater than during either October, 1921, or November, 1920.

There were in existence at some time or other during the month 18 strikes, involving about 3,950 workpeople with a time loss of about 98,100 working days, as compared with 16 strikes, 2,229 workpeople and 54,704 working days in October, 1921; and 21 strikes, 2,295 workpeople and 27,269 working days in November, 1920. On November 1 there were on record 16 strikes affecting 1,950 workpeople. Two strikes were reported as having commenced during November. One of the strikes commencing prior to November was reported terminated, leaving 17 strikes, involving about 3,919 workpeople on record at the end of the month.

Prices

The prices movement continued downward, the index number of wholesale prices and the average cost of the retail food budget, both being lower. There were decreases in farm products and foods except dairy products, also in textiles, lumber and house furnishings. Raw furs were up.

In wholesale prices the index number was down to 227.3 for November, as compared with 229.2 for October; 304.2 for November, 1920; 307.7 for November, 1919; 290.9 for November, 1918; and 137.5 for November, 1914. The chief changes for the month were declines in grain, livestock and meats, miscellaneous foods, textiles, metal and implements, building materials and in house furnishings. The only increases of importance were in dairy products, and in raw furs.

In retail prices the average cost of the weekly family budget of 29 staple

foods in some sixty cities at the beginning of November was \$11.08 as compared with \$11.48 at the beginning of October; \$15.32 in November, 1920; \$14.27 in November, 1919; \$13.49 in November, 1918; and \$7.96 in November, 1914. The cost of food, fuel and rental averaged \$21.60 for November

as compared with \$22.01 for October; \$26.13 for November, 1920; \$22.99 for November, 1919; \$21.45 for November, 1918; \$14.25 for November, 1914. The chief changes for the month were decreases in meats, bread, flour, potatoes and increases in eggs. Coal and wood averaged slightly lower.

II.—Industries and Trades during November, 1921

Logging

IMPORTANT seasonal expansion was again reported in bush operations, mainly in Ontario but in lesser degree in other provinces also. The camps at Louisville, Que., opened up with fair sized staffs; at River Desert there was also more activity, while a large working force was dispatched from Hull. Montreal firms, however, employed fewer loggers in their bush operations than during the preceding month and at Three Rivers also the situation was not as favourable. In Ontario, the gains made during November were very pronounced and exceeded those registered during the corresponding period of last year. The camps at Blind River, Braeside, Fort Frances, Haileybury, Nester-ville and Pembroke employed considerably larger staffs than during October; important increases also occurred at upper Ottawa points. In British Columbia the situation showed only slight changes. Alert Bay reported slightly less activity, while at Headquarters there was a minor gain. Information respecting the month of October, which was not available for insertion in the November issue of the LABOUR GAZETTE, shows that timber of all species scaled in British Columbia in that month totalled 138,972,122 feet as compared with 139,010,983 feet in September. The quantity of Red Cedar scaled during October constituted over 40 per cent of the total, with Douglas Fir coming next in order.

Mining

There were further increases in the employment afforded in coal mining, mainly in Alberta, though the Nova Scotia fields also employed slightly larger working forces. The mines at Joggins and Stellarton, N. S., were busier, but at Inverness, Little Bras D'Or, Springhill and Glace Bay there was less activity. At Minto, N.B., there was a minor increase in the number of workers employed. In Alberta, the mines at Brule, Coalhurst, Coleman, Commerce, Drumheller, Edmonton, Nordegg and Taber showed slight gains in employment. On the other hand, at Blairmore, Canmore and Hillcrest there was some contraction. Coal mining in British Columbia was rather more active than during October, minor additions to working forces being made at Cassidy, Cumberland, Fernie, Middleboro, Nanaimo and Wellington. Asbestos and chrome mining in Quebec, on the whole, was slightly more active than during October. At Asbestos, Black Lake and Coleraine staffs were larger than in September and October. At Thetford Mines, on the other hand, there was a tendency to reduce staffs although some mines afforded increased employment. Salt mining at Amherstburg, Ont., was in lesser volume than during the preceding month. Nickel mining at Coniston showed improvement, while at Nickelton production continued at a low level. Gold mining at Timmins and South Porcupine was somewhat more active, but at Schumacher a smaller working force was employed than in October. Silver mining

at Cobalt during November remained practically on the same level as regards employment as in October, although the shipment of ores exceeded that made in the latter month. In British Columbia slightly less employment was afforded in the metal mines. At Surf Inlet, Rossland and Anyox, the metal mines employed smaller staffs, though at Trail and Kimberley production was on the increase.

Manufacturing Industries

In the food group employment was at a slightly lower level than during October, mainly on account of continued

FOOD PRODUCTS reductions in fruit and vegetable canneries; abattoirs and meat packing plants and sugar and confectionery manufacturing however, showed gains. The sugar plant at Dartmouth, N. S., employed a larger staff than in October although part of the factory was still closed down. At St. John, N. B., there was a reduction in employment in the refinery. Chocolate manufacturing at Halifax, N. S., and St. Stephen, N. B., employed somewhat fewer persons than in October. The sugar refinery at Wallaceburg, Ont., maintained practically the same staff as during the preceding month, there being only a nominal increase in activity. At Kitchener the situation was slightly less favourable in the sugar industry. Confectionery manufacturing at Brantford was rather more active, but at London and Toronto there were declines in the volume of employment afforded. The production of starch at Fort William showed a minor gain. In Montreal sugar refining was considerably brisker than during October, but chocolate and confectionery manufacturing was at a somewhat lower level, though there were additions to staffs in some establishments. The canneries in Ontario still further reduced their staffs particularly at Leamington. Flour mills at Keewatin and Port Colborne maintained about the same working forces as during the preceding month. At Winnipeg confec-

tionery making employed fewer people than in October, as did also the manufacture of flour and other milled products. The sugar refinery at Vancouver registered a minor decline in production. Meat packing plants at Hull showed no change in the situation as compared with October; at Montreal, however, that industry was considerably brisker. There was also improvement in the volume of employment afforded in packing plants at Toronto, while at Peterboro the staffs were stationary. Packing plants at Winnipeg showed increases; at Calgary and Edmonton also there was greater production in the meat industry.

The iron and steel industry afforded considerably less employment in November than in the preceding month. The production of iron and steel at New Glasgow and Sydney Mines, N.S.

IRON AND STEEL PRODUCTS showed increases, although there were local fluctuations in the latter centre. Employment in the shipyards at Halifax continued at a low level. The same is true also of the shipyards at Montreal and Three Rivers. On the other hand, there was increased activity at Sorel. Car manufacturing in Montreal, on the whole, recorded a decline, though there were gains in some establishments. Boiler and engine manufacturing in the same city registered a minor decrease, as did also the production of sheet metal goods. Trade machinery factories were somewhat busier. Rolling mills on the whole employed a smaller number of workers in Montreal, though in some plants there were increases in staffs. Iron and steel fabrication at Lachine was considerably more active. At Sherbrooke there was a slight increase in machinery manufacturing. Stationary engine and boiler factories at Montmagny afforded much less employment than during October, and steel foundries at Longue Point reported curtailment of operations. Fire arms factories at Brownsburg and Quebec showed no change in employment from

the preceding month. In Ontario agricultural implement manufacturers reported varying conditions; at Brantford there were both increases and decreases, the latter predominating. At Toronto, the industry was considerably more active. The production of engines at Brantford and Galt was practically on the same level as in October, while at Toronto there was greater activity. Automobile factories at Chatham, Oshawa, St. Catharines and Windsor were, on the whole brisker, although there were local fluctuations in those centres; at Walkerville, on the other hand, reduced employment was reported. Steel car manufacturing at Hamilton was much slacker than during October; at Kingston the locomotive shops continued to register low activity. North Bay railway shops were somewhat busier while a minor decline occurred in car manufacturing at Ottawa. The London and Stratford locomotive shops reported increased operations, but at Ottawa and Toronto there was not much change in the situation. Stove manufacturing at Guelph continued to show improvement; at London, also, the trade was brisker, but in Toronto there was a considerable falling off in production. Iron and steel fabrication at Hamilton registered a substantial decline and there was a minor drop in that industry at Walkerville. The production of wire and wire products at Hamilton and Leaside eased off somewhat. Small hardware manufacturing at Ingersoll was slightly more active than in October, but at Hamilton there was a minor reduction in employment. Shipbuilding at Kingston, while slightly brisker than in the preceding month, continued much below normal; at Midland, shipbuilding also was below normal, and in addition, afforded less employment than in October. At Port Arthur that industry reported curtailment. There was a minor decline in the working force employed in the Sault Ste. Marie rolling mills, and at Toronto there was also less activity. Iron and steel fabrication at Winnipeg showed a slight decrease. At Selkirk, the rolling mills maintained practically the same

staff as during October.. An important decline was reported during November in shipbuilding at Vancouver, while in Victoria the situation remained at the October level.

The leather industry during November showed further pronounced expansion on the whole. At Montreal increased production was registered in boot and shoe factories and in the manufac-

LEATHER
AND RUBBER
PRODUCTS

ture of leather goods, although some firms in that centre reduced their staffs. Quebec factories also were busier. In Ontario there were gains in boot and shoe manufacturing at Galt and Toronto. On the other hand, at London there was less activity, while Kitchener tanneries maintained the same staffs as in the previous month. Rubber manufacturing showed further expansion during November, partly on account of the partial re-opening of factories that had been closed down for some time. At Granby, Que., there was practically no change in the situation. Montreal firms showed a tendency to reduce staffs, although there were minor gains in some firms. At St. Jerome, there was slight expansion. Toronto factories producing rubber footwear and tires recorded no change on the whole; small reductions and slight increase counterbalancing each other. At Guelph there was nominal increase in activity. Rubber footwear manufacturing at Merritton showed pronounced gains, due to the re-opening of a factory which had been partially closed since midsummer. At Bowmanville there was an insignificant increase in employment, while at Kitchener there was a considerable decrease.

Continued curtailment of sawmill-ing operations was recorded during November. The lumber

LUMBER
PRODUCTS

mills at Plaster Rock, N. B., and at Montreal and Breakeyville, in Quebec, showed further contractions. On the other hand, at Hull and at Point Etchemin employment in sawmills was

slightly brisker. Furniture factories at Beauharnois and Cowanville were slacker. In Ontario the mills at Byng Inlet, Rockland, Pembroke and Fort Frances were considerably less busy. At Arnprior and Keewatin lumbering operations registered minor gains, as did also furniture making at Brantford and Newmarket. Carriage building at Orillia and Chatham reported curtailment. Furniture manufacturing at Toronto continued to show expansion though the change was very slight. Box manufacturing at Toronto also reported a slight improvement. At Chemainus, B. C., employment in saw mills continued at the same level as during October; at Fraser Mills and New Westminster there were declines in production. The mills at Golden, Vancouver and Wardner, on the other hand, registered increased activity. An important contraction was indicated in lumbering operations at The Pas in Manitoba.

Pulp and paper manufacturing during November showed some reductions when compared with October. At Murray, N. S., there was a slight increase in activity, although production continued on a low level. At Chatham, Bathurst and St. John, N. B., also there was continued expansion, though not on a particularly large scale. At Three Rivers, Windsor Mills, Cap Magdeleine, LaTuque and Bagotville the situation was somewhat more favourable. At Hull, Shawinigan Falls, Chandler, Chicoutimi and East Angus, on the other hand, operations were curtailed. The drop in production at East Angus and Chandler was specially large. At Cornwall, Ottawa and Sturgeon Falls, in Ontario, there was considerably more activity than during October, while at Sault Ste. Marie, Toronto, Iroquois Falls, Thorold and Smooth Rock Falls the paper mills were less busy. Publishing houses in Toronto afforded about the same employment as in the preceding month, though the printing trades were brisker at Winnipeg, Regina and Saskatoon than in

October. Practically no change occurred in the situation in printing establishments in Edmonton and Calgary. There was a large drop in production in the paper mills at Ocean Falls, B. C., and Powell River also registered curtailment of operations.

Textile manufacturing showed further gains during November, although there were local variations at different points. At Truro, N.S., the knitting mills continued to be busy, employing somewhat larger staffs than during October. Cotton manufacturing at Yarmouth, on the other hand, was less active. In New Brunswick the cotton mills at Marysville, Milltown and St. John afforded considerably more employment. Thread, yarn and cloth factories at Montreal were busier; employment in men's furnishing factories in the same centre showed a slightly upward tendency, while the production of women's garments eased off to some extent. Corset manufacturing at Quebec manifested a slight reduction. The cloth factories at Sherbrooke reported varying conditions, but on the whole there were important gains in employment. At Three Rivers further expansion occurred in the cotton mills, while the knitting mills at St. Hyacinthe reported smaller staffs. Further expansion in operations was registered in the manufacture of men's furnishings at St. John's, but thread factories in the same centre were considerably less busy. Cotton manufacturing at Montmorency Falls, Valleyfield and Lachute Mills was in greater volume than in October. Carpet manufacturing in Toronto reported increases in employment; bedding factories, on the other hand, were less busy. Garment manufacturing, on the whole, employed a smaller number of persons, though in some cases there were increases in staffs. Knitting mills in Toronto were slightly brisker, though cloth manufacturing showed contractions. At Hamilton the production of men's clothing eased off somewhat. Cotton manufacturing in the same centre showed further

expansion, as did also the production of hosiery and knit goods. The cordage factories at Brantford maintained their usual level of employment, while knitting mills in the same centre were somewhat busier. Men's garment manufacturing at London showed a slight increase in activity; at Kitchener also there was a minor gain in employment in that industry. Cordage manufacturing at Welland employed a larger number of persons than in October. The production of cotton goods at Cornwall was on the same level as in the preceding month, increases in some plants being offset by declines of the same size in others. At Woodstock, Paris and Hespeler knitting mills were brisker. Employment was well maintained in the woollen mills at Preston and the knitting mills at Dunnville. Further activity was manifested in the production of hosiery and knit goods at Peterboro, while carpet manufacturing at Guelph also made gains.

Broom and brush manufacturing at St. John, N. B., employed a larger working force in November

MISCELLANEOUS than during any month
PRODUCTS since May. Tobacco

manufacturing in Montreal was in greater volume than in October; some large firms showed reductions, but a greater number made important additions to their staffs. Musical instrument companies in the same city were somewhat slacker, while there was a slight gain in the employment afforded in the manufacture of electric apparatus. Electric current plants also were considerably busier. At Montreal, the making of explosives eased off somewhat, but paint factories showed some expansion. The usual level of employment was maintained in the power plants at Quebec, but tobacco manufacturing in that city declined. At Farnham the tobacco industry was busier. The manufacture of electric apparatus at Hamilton, Ont., showed a considerable falling off as compared with October; tobacco making also in that city was at a lower level. At St. Catharines and

Stratford there was slightly more activity in electric apparatus manufacturing, but at Toronto the industry registered some weakness. In Toronto musical instrument manufacturing was much brisker than during October, but soap factories and power plants were slacker. The manufacture of photographic apparatus showed gains at Toronto, although it was still much below normal. Drug manufacturing at Walkerville manifested a further slight expansion while the production of distilled liquors remained on the October level. Static conditions on the whole were noted in the power plants at Winnipeg; minor gains in one establishment were offset by small declines in employment in another. At Vancouver, however, such plants were considerably busier. Jewellery manufacturing at Montreal and Sherbrooke employed a slightly larger number of persons. At Shawinigan Falls aluminum manufacturing registered decreased activity; the manufacture of tin articles at Maisonneuve also was duller. Nickel refining at Deschenes employed a slightly smaller number of persons. The manufacture of brass, bronze and copper products at Montreal showed a minor depression, increases in some factories being rather more than offset by decreases in others. Nickel smelting at Copper Cliff, Ont., was not quite as brisk as in October; at Port Colborne, however, silver and cobalt reduction and refining employed a larger working force. Brass, bronze and copper products manufacturing at Hamilton was brisker. This is true also for Toronto. Aluminum manufacturing in the latter city showed a slight contraction. Smelting and refining plants at Anyox, B.C., were busier than in October.

Construction

The Canadian Pacific, Grand Trunk, and Canadian National Railways reported considerable contraction in the volume of employment afforded on railroad construction, including maintenance of way, during the month of November. At the end of the month they

employed over 9,000 fewer persons than at the end of October. Shrinkage was registered each week increasing in extent towards the close of the month. The Canadian Pacific Railway reduced its working forces by nearly 3,800 persons; the Grand Trunk released approximately 1,350 workers, while the Canadian National employed over 4,200 fewer men on construction. The four western provinces and Ontario reported the greater part of the contractions.

Employment as indicated by the value of the building permits issued in 56 cities during October showed a further decline; the total value of the building authorized amounted to \$9,248,469 in October as compared with \$9,988,147 in September and with \$9,643,230 in October, 1920. The most pronounced decrease in the former comparison occurred in Quebec, while New Brunswick showed the largest increase. Contractors generally employed smaller staffs during November than in October, though there were local variations in some centres. Reductions in working forces on the whole were reported at Halifax, St. John, Sherbrooke and Montreal. In the last named city, however, some firms registered considerably more activity. The same tendency to curtail staffs was indicated by contractors in Toronto; at Hamilton, on the other hand, there was some expansion. Firms at Windsor and Fort William also were busier. Shrinkage in employment occurred in London, while practically no changes on the whole were reported at Kingston and Kitchener. Winnipeg, Man., and Penticton, B.C., firms reported recessions as did also contractors in Vancouver. Highway construction at Banff, Alta., employed a slightly larger staff.

Transportation

The gross earnings of the Canadian National Railways during November were \$10,742,852 as compared with \$11,691,881 in the preceding month. Information respecting the month of October, which was not available for insertion in the November issue of the LABOUR GAZETTE,

shows that the gross earnings of the Canadian Pacific Railway during October were \$22,089,624 as compared with \$19,494,761 in September and with \$24,800,632 in October, 1920. During November, the number of persons employed by the Canadian Pacific, Grand Trunk and Canadian National Railways in operation, including general offices, trainmen, engine crews, station employees, sleeping, parlour, and dining car employees, recorded a net decline of almost 2,000 persons. Of these the Canadian Pacific released over 1,400 workers, the Grand Trunk about 150 workers, and the Canadian National more than 400 workers. Ontario, Quebec, Saskatchewan and Manitoba showed the most pronounced declines on the whole. Further contraction in operations was reported on the electric railways in Montreal. Quebec city local lines maintained the same staff as in October. At Hamilton there was a slight gain in the employment afforded on the electric railways. The working force on the Toronto civic electric railway, while greatly above normal on account of extension and improvement work, was somewhat smaller than during October. The street railway in Ottawa also was slightly less busy. On the other hand, some expansion was reported in Winnipeg. At Calgary and Edmonton insignificant changes occurred in the volume of employment afforded on the electric railways. The lines in Vancouver and Victoria were busier. The Pacific ports afforded more employment than in October, while at the Maritime, Upper St. Lawrence and Great Lake ports there was some curtailment.

Trade

Slight expansion in preparation for the Christmas season was reported in the staffs of retail stores. Establishments in the more important centres in all provinces employed larger sales forces than during October. Wholesale trade, on the other hand, was slightly less busy though the change was almost negligible.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907**Proceedings for the Month of November, with texts of Board's Report and of Report of Board of Arbitrators, established under Conciliation and Labour Act**

DURING the month of November the Department received a report from the Board of Conciliation and Investigation established to deal with the dispute between the Grand Trunk Railway Company and certain of its employees, being clerks, freight handlers, roundhouse and shop labourers, station employees, etc., members of the Canadian Brotherhood of Railroad Employees.

Three applications were received for the establishment of Boards and chairmen were appointed in connection with two Boards which had been established during the previous month.

A report was also received from the Board of Arbitrators established to deal with the dispute between the Intercolonial and Prince Edward Island, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees.

Applications Received

During the month of November applications for the establishment of Boards were received as follows:—

(1) From the employees of the Canadian National Telegraphs at Toronto and Montreal, being morse and automatic telegraphers, linemen, clerks, etc., members of the Commercial Telegraphers' Union. At the close of the month this application was under consideration.

(2) From the employees of the Marconi Wireless Telegraph Company, Glace Bay, N.S., being members of Federal Labour Union No. 16570, American Federation of Labour. A special officer of the Department was sent to the locality and through his mediation it is understood a settlement was effected.

(3) From the employees of the Hull Electric Company, Hull, Que., being members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America. A Board was established composed as follows: Messrs. Geo. D. Kelley, Ottawa, and Fred Bancroft, Oakville, Ont., nominees of the company and employees respectively. At the close of the month the chairman had not been named.

Other Proceedings under the I. D. I. Act

During the month of November other proceedings under the I. D. I. Act took place as follows:—

(1) Mr. W. E. Segsworth, Toronto, was appointed chairman of the Board established during October to deal with the dispute between the Algoma Steel Corporation, Sault Ste. Marie, Ont., and certain of its employees, being engineers, firemen, conductors and brakemen. Mr. Segsworth was appointed by the Minister in the absence of a recommendation from the nominees of the company and employees, Messrs. Irving and Murdock, respectively.

(2) Reverend Father T. J. Brennan, Espanola, Ont., was appointed chairman of the Board established during October to deal with the dispute between the International Transit Company, Sault Ste. Marie, Ont., and certain of its employees, being motormen, conductors, barn employees and interlocker signalmen, members of Local Division No. 850, Amalgamated Association of Street and Electric Railway Employees of America. Father Brennan was appointed by the Minister in the absence of a recommendation from the nominees of the company and employees, Messrs. O'Flynn and McMillan, respectively.

Report of Board in Dispute between the Grand Trunk Railway [Company and its clerks, freight handlers, etc.]

A REPORT was received from the Board established to deal with the dispute between the Grand Trunk Railway Company and certain of its employees, being clerks, freight handlers, roundhouse and shop labourers, station employees, etc., members of the Canadian Brotherhood of Railroad Employees. The Board was composed as follows: Messrs. J. M. Godfrey, K.C., chairman, H. H. Vaughan and Peter Berecovitch, K.C., M.P.P. This Board was established in August last but had adjourned to permit of further direct negotiations between the disputants. A tentative agreement was at one time understood to have been effected, but the terms were subsequently declared unsatisfactory and the sittings of the Board were resumed. The report of the Board was signed by the chairman and Mr. Vaughan and was accompanied by an agreement signed by representatives of the company and of the various unions embracing the employees concerned. Mr. Berecovitch did not concur in these findings and presented a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between Grand Trunk Railway System, employer, and Clerks, Freight Handlers, Roundhouse and Shop Labourers, Station Employees, etc., members of Canadian Brotherhood of Railroad Employees, employees.

Toronto, November 21st, 1921.

The Honourable Gideon Robertson,
Minister of Labour,
Ottawa.

Sir,—

The Board first convened in Montreal on August 31st and September 1st, but were compelled to adjourn owing to the absence of the parties.

The Board again met in Montreal on the 18th day of October, and sat continuously until the 21st day of October.

The employees were represented by J. E. McGuire, H. F. A. Corbin, J. D. Chick, and M. M. Maclean.

The employer was represented by C. F. Needham, J. F. Aitchison, J. N. Sparling, R. C. Johnston, T. Turbey, F. Price, M. F. Blaiklock, H. Hewlitt, H. A. Balkwill and E. J. McVeigh.

After both parties had fully presented their case the Board suggested that a further effort should be made to arrive at an agreement by means of a round-table conference. This suggestion was accepted and as a result the parties executed the agreement hereto annexed.

Subsequently the Chairman of the Board received the following letter directed to Mr. W. D. Robb, Vice-President of the Grand Trunk Railway Company, from Mr. J. E. McGuire, General Chairman of the General Grievance Committee for the Grand Trunk Railway System of the Canadian Brotherhood of Railway Employees:

Ottawa, Ont., October 27th, 1921.

Mr. W. D. Robb,
Vice-President,
Grand Trunk Railway,
Montreal, P.Q.

Dear Sir,—

I am very much surprised to find that during my temporary absence from the committee, due to the serious illness of my wife, that two members of our committee and an employee not a member of the committee at all, were permitted by the representatives of the company to sign the tentative agreement.

I must point out that the employees who have signed the agreement on behalf of those represented by the Canadian Brotherhood of Railroad Employees, had absolutely no authority to sign such an agreement, without first having obtained my approval as the responsible Chairman of the committee.

I am sure that the representatives of the company did not intentionally commit an act so manifestly unfair to me and those who

hold me responsible, but now that the matter is brought to your attention, you will see the injustice done me.

The representatives of the company have had many years of experience in matters of this kind and know that the General Chairman of a committee is the only one of a committee authorized to sign such an agreement and that the authority of a chairman cannot be delegated to another. I venture to say that there is not a precedent in all the negotiations of the representatives of the company for the action taken in this case.

I must ask that negotiations be resumed at the earliest possible date and, failing an amicable settlement, that the Board of Conciliation be asked to proceed.

I am sending a copy of this letter to the members of the Board and to the Department of Labour.

Yours truly,

J. E. MCGUIRE,
General Chairman.

As a result of this communication the Board was reconvened at Ottawa on November 1st, 1921, and Mr. McGuire stated that the members of his Committee who signed the agreement were not authorized to do so until it has been submitted to their General Grievance Committee for approval. He further stated that this Committee had been called to meet in Toronto on the 2nd day of November, when the matter would be taken into consideration.

The Board therefore adjourned to meet in Toronto on the 3rd of November. On that date they met the said General Grievance Committee, when the following statement was presented to the Board:

Toronto, Ontario, Canada,
November 2nd, 1921.

TO WHOM IT MAY CONCERN:

We, the undersigned members of the General Committee representing Grand Trunk Railway employees in meeting assembled, have heard the report of our General Chairman, J. E. McGuire, and our Vice-President, Karl F. A. Corbin, and having studied the documents purporting to be the agreement signed by the representatives of the Grand Trunk Railway Company and by certain of our Committee, do hereby declare that our General Chairman, J. E. McGuire, has properly repudiated such agreement as having been signed without au-

thority of the General Grievance Committee. We further declare that the so-called agreement is unacceptable to us and that our General Chairman is instructed to so advise the Board established by the provisions of the Industrial Disputes Investigation Act, 'to deal with this dispute.'

The Committee desires to express its sincere regret that such a misunderstanding of authority should have occurred and, in order that any further misunderstanding may be avoided, we hereby reaffirm the previous decision of this General Committee that only such agreements as may be approved of by the General Grievance Committee and signed by our General Chairman in accordance with article 45 of Constitution and General Rules of the Canadian Brotherhood of Railroad Employees, will be binding on this Committee and the employees we represent.

J. E. MCGUIRE,
KARL F. A. CORBIN,
W. BYHAM,
E. E. BRIDGEN,
J. E. CHICK,
H. L. FELTON,
A. LOWE,
W. MARTIN,
J. A. DICKENSON,
W. J. PRINDIBLE,
C. BAILEY,
A. H. LOWE,
D. OSBORNE,
THOS. MILLER,
F. O. HORTON,
R. O. WALKERS.

As a justification of the position taken by the Committee the following extract from the minutes of the Committee, dated December 9th, 1919, was filed:

Toronto, Ont., Dec. 19th, 1919.

EXTRACT FROM MINUTES OF MEETING OF
GENERAL GRIEVANCE COMMITTEE HELD IN
THE CITY OF TORONTO, ONT., DEC., 19th,
1919.

Moved by Brother R. O. Waters, seconded by Brother W. Byham, that any and all schedule agreements arrived at between the employees represented by the Canadian Brotherhood of Railroad Employees and the Grand Trunk Railway Company shall be valid only when signed by the General Chairman after approval by the General Grievance Committee.

It should be noted that the agreement has been executed not only by the committee representing the Canadian Brotherhood but also by employees of three other organizations acting for a number

of employees of the classes affected by the dispute. So far as the Board is aware, these other organizations have not repudiated the agreement.

In view, however, of the action taken by the General Committee of the Canadian Brotherhood your Board has been compelled to further deal with this matter.

The General Committee stated that owing to the financial position of the railways the employees were prepared to assist by making sacrifices and were, therefore, willing to accept some reduction of wages. They contended however that the aggregate reduction amounting to 12.8 per cent of the pay of these classes was excessive. They did not suggest what the reduction should be. They further said that in any event the manner in which the reduction was distributed bore too heavily on the lower paid employees of the class.

The question before the Board is whether the reductions proposed in the tentative agreement submitted on July 18th, 1921, are unjustifiable and inequitable.

These reductions practically conform to those ordered by decision 147 of the United States Railway Labour Board.

These reductions have been accepted by the employees on the United States railways and tentatively accepted by some of the other classes on the Canadian railways.

It appeared from the evidence submitted to the Board that the aggregate reduction in the classes of employees affected by this dispute amounted to 12.8 per cent. It also appeared that since July, 1920, there has been a decrease in the cost of living of approximately 20 per cent. In view of this fact and of the financial position of the railway your Board is of the opinion that these reductions in the aggregate are not unjustifiable and inequitable.

However it appears from the evidence submitted to the Board that as a result

of the method adopted in distributing the reductions among the employees in this class the lower paid employees suffered greater decreases than those who received higher pay. It obviously seems unfair that the heavier burden should be placed on those who are least able to bear it. Your Board is of the opinion that an effort should be made by further negotiations to adjust these inequalities.

(Sgd.) JOHN M. GODFREY,
Chairman,
Board of Conciliation.

(Sgd.) H. H. VAUGHAN,
Member.

AGREEMENT ENTERED INTO BETWEEN THE
GRAND TRUNK RAILWAY AND THE EM-
PLOYEES' COMMITTEE REPRESENTING
CLERKS AND OTHER CLASSES OF EMPLOYEES
AS NAMED HEREIN:

It is agreed between the Grand Trunk Railway and their clerks and other classes of employees as herein named, represented by Committee of Employees, as follows:

(A) Effective July 16th, 1921, the Railway will apply and the employees will accept tentatively the following changes in rates of pay as compared with rates in effect at June 30th, 1921:—

	Decrease per hour (Cents)
1. Storekeepers, assistant storekeepers, chief clerks, foremen, sub-foremen and other clerical supervisory forces.....	6
2. Clerks	6
3. Train and engine crew callers, assistant station masters, train announcers, gatemen, and baggage and parcel room employees (other than clerks).....	10
4. Janitors, elevator and telephone switchboard operators, office, station and warehouse watchmen, and employees engaged in assorting waybills and tickets, operating appliances or machines for perforating, addressing envelopes, number claims and other papers, gathering and distributing mail, adjusting dictaphone cylinders, and other similar work.....	10
5. Office boys, messengers, chore boys, and other employees filling similar positions, and station attendants.....	5
6. Station, platform, warehouse, transfer, dock, pier storeroom, stock-room, and team-track freight handlers or truckers, and others similarly employed	6

7. The following differentials shall be maintained between truckers and the classes named below:

- (a) Sealers, scalers, and fruit and perishable Inspectors, one (1) cent per hour above truckers' rates as established under Section 5.
- (b) Stowers or stevedores, callers or loaders, locators and coopers, two (2) cents per hour above truckers' rates as established under Section 6.

The above shall not operate to decrease any existing higher differentials.

- 8. All common labourers in and around stations, storehouses and warehouses, not otherwise provided for..... 8½
- 9. Coal wharf foremen 10
- 10. All common labourers in and around shops and roundhouses 8½
- 11. Pumper engineers and pumpers..... 8½
- 12. Labourers employed in and around shops and roundhouses, such as engine watchmen and wipers, fire builders, ashpitmen, flue borers, coal passers, coal chutemen, etc. 10
- 13. Stationary engineers (steam)..... 8
- 14. Stationary firemen and engine room oilers 8
- 15. Boiler room water tenders and coal passers 6

(B) Monthly rates shall be adjusted on the basis of 204 hours per month.

(C) The aggregate of the decreases for monthly rated employees will be arrived at on the basis of the number of positions, and will be applied, as may be mutually agreed upon, in adjusting the rates for the same positions. Except as may be otherwise mutually agreed upon between the Railway and the Committee, the adjustments so made in any rates shall be effective the beginning of the month following that during which such adjustments were arranged, and shall not be retroactive to July 16th, 1921.

(D) Within fifteen (15) days after notice has been given by either the Railway or the Committee to the other, the Railway and the Committee will confer further in regard to rates of pay, and, except as may be otherwise mutually agreed upon, any rates of pay finally agreed upon will be effective July 16th, 1921. Retroactive pay resulting from rates finally agreed upon will be allowed, but no reclaim shall be made from employees for any excess paid to the employees prior to the effective date of rates established by such final agree-

ment. In determining retroactive pay for monthly rated employees whose rates may be adjusted under clause (C) hereof, the amount of back pay, if any, shall be computed on the basis of the difference between the rates established under clause (C) hereof and the rates finally agreed upon.

(E) Negotiations now proceeding in respect to schedule rules shall be postponed subject to negotiations being resumed on fifteen (15) days' notice from either the Railway or the Committee to the other.

(F) Unless otherwise mutually agreed upon there will be no change made effective in schedule rules before thirty (30) days after January 1st, 1922.

(G) Should such conference fail to bring about an agreement in regard to rates of pay and schedule rules, the Railway and the Committee will, unless otherwise mutually agreed upon, within ten (10) days of such failure, jointly apply to the Department of Labour for the appointment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, with regard thereto, provided, however, that this understanding does not prejudice the right of either the Railway or the Committee to apply on its own behalf for a Board.

(H) The word "Committee" as herein referred to shall mean the accredited representatives of the employees. Each of the four organizations hereunder named shall have the right to name three members to such Committee. All members of the Committee shall be employees of the Railway.

Executed at Montreal this twenty-fifth day of October, 1921.

Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Grand Trunk Railway System, employer, and Clerks, Freight Handlers, Employees Roundhouse and Shop Labourers, Station Employees, etc., members of Canadian Brotherhood of Railroad Employees, employees.

To the Honourable Gideon Robertson,
Minister of Labour, Ottawa.

Sir,

Your Board met at various times in Montreal, Ottawa and Toronto, and, after both parties had fully presented their case, the chairman with the concurrence of the other members of the Board suggested that a further effort should be made to reach an agreement by means of a round-table conference. This suggestion was acted upon, and as a result the parties executed the agreement annexed to the report made by the majority of your Board. Subsequently, the chairman received written communications from the representatives of the parties which justified him in reconvening the Board and further considering the subject matter if the dispute as well as the reasons given by the General Committee of the Canadian Brotherhood of Railroad Employees for refusing to be bound by the agreement entered into at the round-table conference. The General Committee at the meeting of the Board in the city of Toronto stated that, owing to the financial position of the railways,

the employees were prepared to assist by making sacrifices and were, therefore, willing to accept some reduction of wages. They contended, however, that the aggregate reduction amounting to 12.8 per cent of the pay of these classes was excessive... and in any event that the manner in which the reduction was distributed bore too heavily on the lower paid employees of the class.

The question to be considered is whether the reduction, made effective by the employer on the 16th of July, 1921, of 12.8 per cent in the aggregate of the classes of employees affected is unjustifiable and inequitable. The majority of your Board are of the opinion that these reductions in the aggregate are not unjustifiable or inequitable, and from this opinion the undersigned, with all due deference, respectfully dissents.

The reasons given for the majority report may be summed up as follows:

I. These reductions practically conform to those ordered by decision 147 of the United States Railway Labour Board.

II. These reductions have been accepted by the employees on the United States railways and tentatively accepted by some of the other classes on the Canadian railways.

III. That since July, 1920, there has been a decrease in the cost of living of approximately 20 per cent.

I submit that:

The fact that the United States Railway Board ordered similar reduction in the United States, is not *per se* a valid reason for putting such reduction into effect in Canada.

We have been told that the United States Railroad Labour Board in dealing with matters relating to wages and working conditions of railroad employees took into consideration certain factors which they were required to consider under the Transportation Act, such as:

I. The scale of wages paid for similar kinds of work in other industries.

II. The relation between wages and the cost of living.

- III. The hazards of the employment.
- IV. The training and skill required.
- V. The degree of responsibility.
- VI. The character and regularity of the employment.
- VII. Inequalities of the increases in wages or treatment as result of previous wage orders or adjustments.
- VIII. Other relevant circumstances.

There has been nothing put before your Board to show that the United States Labour Board seriously considered any of the factors hereinbefore enumerated before handing down decision No. 147. On behalf of the employees it was urged that the United States Railway Board passed over the various factors very lightly, and that the American board were not particularly guided by any factor outside of the general depression which had resulted in lack of employment in other industries and for which railway employees in Canada at least can hardly be held responsible.

Even if we assume that the United State Railroad Labour Board did take all these factors into consideration before reaching its decision, surely this decision is not to be applied arbitrarily by the railways in Canada without the employees being consulted and an opportunity given them to prove that some of the factors which the United States Railroad Labour Board were supposed to take into consideration were not applicable in Canada.

Furthermore, it has been proven before your Board that the cost of living in Canada is 10.5 per cent higher than the cost of living in the United States, and the railway employees on United States lines, in the class affected by this dispute, receive a higher minimum wage, even after the reduction affected by decision 147, than the employees of the Grand Trunk Railway, who are parties to the present dispute. In my humble opinion, a Canadian employer, employing

Canadian labour, on a Canadian railroad operated in Canadian territory by a Canadian Government, should not be governed by the decision of an American Board who are appointed only to deal with conditions that exist in the United States of America.

The answer to the second reason given by the other members of your Board for saying the reductions are not unjustifiable or inequitable is to be found in the statement filed by the employees as Exhibit No. 1. This statement shows comparative rates as paid by the New York Central Railroad and the Grand Trunk Railway Company, and clearly indicates that the increases on the American railroads were made on a higher basic rate than in Canada, which resulted in the establishment of higher minimums in that country. While it is true that some of the other classes of employees of this company have tentatively accepted the reductions put into effect by the company, it must not be forgotten that speaking generally these classes received a much higher rate before the reductions were made than did the employees affected in the present dispute, and I desire here to emphasize that representatives of the employees affected stated to your Board that they were willing to assist the company to the same extent by accepting decreases on a proportionate percentage basis with the employees in the running trades (train services).

It was further demonstrated to your Board that the wages received by a large majority of the employees affected by this dispute, on the Grand Trunk Railway, *are lower than the wages paid for similar service on the Canadian National Railways* and lower than the prevailing rate for such services on railways in the United States.

As to the final contention of the majority of the Board that since July, 1920, there has been a decrease in the cost of living of approximately 20 per cent based on the Department's family budget, it was also demonstrated by the

representatives of the employees that the figures of the Department were at least one month behind, it requiring that length of time to gather and publish them. In the meantime, the cost of living in some respects has been advancing, and, when the price of the commodities which the average worker in the classes under dispute was able to buy are taken into consideration, a much less reduction in the cost of living would be shown.

For the reasons hereinbefore given, I felt it was impossible for me to concur in the reasons, findings and recommendations of the majority of the Board.

Evidence was presented that employees guarding valuable property of the company are being paid as low as 31 cents per hour. It is difficult to understand how any fairminded person would agree that such a wage would enable the average worker to provide for himself and dependents. Yet I find that on those now receiving this unreasonably low rate, a reduction of 20 per cent was imposed, while other classes of employees receiving \$250 or more per month only suffered a reduction of 7 per cent. I, for one, do not consider reductions so made justifiable or equitable.

I respectfully submit that the question of wage reduction should not be treated only as an economic or as a business proposition. It is a question that should be dealt with from a human point of view. The railroad worker should not be regarded, nor should any other worker, in terms of merchandise, as a commodity to be bought and sold in the open market. The workman should not be placed only on a fodder basis, but should be paid a wage that will enable him to live in reasonable and frugal comfort as becoming a good citizen of this country.

The company's representatives argued that many of the employees in question performing the work of labourers have never been in receipt of wages equivalent to the cost of the family budget, as reported in the *Labour Gazette*, and that these men have been able to live during

this period because we have them with us to-day. No one will seriously contend that these employees have lived properly on the wages received and have been able to give those dependent upon them a fair chance in the battle of life. I believe that as a result of the low wages paid to this and similar classes of workers, may be attributed many of the social evils with which we are confronted to-day, such as the high mortality rate amongst children, child labour, prostitution and others.

I further submit:

After careful consideration of all the evidence offered and arguments adduced by both parties, that a just and equitable basis of settlement of this dispute should be made as follows:

(a) That the reductions to monthly rated employees made effective July 16th, 1921, in all cases where it did not exceed 10 per cent of the wages paid any employee previous to the aforementioned date, be approved of, and that in all cases where it did exceed 10 per cent, the amount in excess be restored to such employee.

(b) That the reduction to hourly rated employees made effective July 16th, 1921, should not exceed 5 cents per hour, and that all reductions to any individual employee in excess of 5 cents per hour be restored to such employee.

(c) That in view of the different rates of pay for the same character of work (for which there is no sound reason apparent), I would recommend that uniform minimum rates should be established for each class, such minimum rate not to be lower than that paid for similar service on the Canadian National Railways.

(d) That no change should be made in the working conditions which might constitute a further reduction in wages or less favourable conditions for the employees.

(e) That the railway company should endeavour to make some satisfactory arrangement with the representatives of the four organizations now claiming the

right to represent the classes of employees that have been before the Board, to poll such employees and ascertain which of the four organizations or four committees the employees desire to represent them.

The organization or committee receiving the support of the largest number of employees should be recognized by the company as the one organization or committee representing such employees.

This, in my opinion, would do away with many of the difficulties now experienced in negotiating wage agreements.

Respectfully submitted.

Montreal, November 28th, 1921.

(Sgd.) PETER BERCOVITCH,
Member, Board of Conciliation,
Grand Trunk Wage Dispute.

Report of Board of Arbitrators in Dispute between the Intercolonial and Prince Edward Island, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees.

A REPORT was received from the

Board of Arbitrators established to deal with a dispute between the Intercolonial and Prince Edward Island, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees. It will be recalled that the disputants had in this case invoked the machinery of the Conciliation and Labour Act rather than that of the Industrial Disputes Investigation Act, 1907, more usually employed in industrial disputes, and this dispute had been referred accordingly to a Committee of Conciliation, Mediation and Investigation, Mr. Hamnett P. Hill, Ottawa, being chairman. The Committee failing, as reported in last month's issue of the *LABOUR GAZETTE*, to procure a settlement, the dispute, under the provisions of the Act, was referred to a Board of Arbitrators, the same members continuing to serve, save that Mr. Hill found it necessary to retire and Reverend Dr. Byron Stauffer, Toronto, was appointed in his stead. The report was signed by the chairman and Mr. Fisher and contained recommendations concerning settlement of the dispute. Mr. Kelley did not concur in these findings and presented a minority report.

Report of Board

In the matter of the Conciliation and Labour Act and of a difference between the Intercolonial and Prince Edward Island National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, and certain of their employees, members of the Canadian Brotherhood of Railroad Employees.

Ottawa, Canada,
November 8, 1921.

Honourable Gideon D. Robertson,
Minister of Labour,
Ottawa, Canada.

Sir,

The Board of Arbitrators established to arbitrate in a dispute between the Canadian National Railways and certain of their employees—clerks, freight handlers, roundhouse, shop and station employees, parlor, sleeping and dining car employees, etc., members of the Canadian Brotherhood of Railroad Employees—make the following their report and award.

The Board occupied ten days in the hearing of evidence and argument and

in subsequent consultation among themselves. The employees were represented by A. R. Mosher, President of the Canadian Brotherhood of Railroad Employees, C. E. Cole and Robert Dykes. The Railways were represented by F. P. Brady, Assistant to the Executive, Canadian National Railways, A. E. Crilly, Assistant to the General Manager and A. C. Egan, General Auditor.

It was explained at the outset that this Board of Arbitrators was asked for and established following the report of a Committee of Conciliation, Mediation and Investigation consisting of H. P. Hill, Chairman, George D. Kelley, and Harold Fisher, in which it was stated that an endeavor to bring about conciliation had failed.

Two important awards increased salaries and wages of railway employees in the United States. These are generally called the McAdoo Award and the Chicago Award. Both of these awards increased wages very considerably. The Canadian railways generally, for reasons with which we are not concerned, followed these awards. In applying the Chicago award, however, there were certain pooling arrangements made by which the employees themselves in certain cases, and within certain limits, were allowed to allocate the increases authorized by the Award.

On the first day of June, 1921, the United States Labour Board, which made the Chicago Award, gave a decision authorizing a general reduction in wages of approximately 12 per cent. The Canadian Railways generally decided to follow this decision and took steps to bring about reductions as authorized in the United States. The Canadian National Railways, with which we have to deal, offered to the different classes of employees what were known as tentative agreements for signature. It was said that these were tentative in the sense that they merely withheld pay pending further negotiations as to revisions of rules governing working conditions and rates of pay. A large number of the classes refused to sign the tentative agreement. The Railways thereupon

proceeded to put into effect a reduction in wages. This reduction, with slight modifications, was that authorized by the decision of the United States Labour Board, and became effective July 16, 1921.

Since the reduction in wages became effective, a number of the different classes of employees have signed the tentative agreement. So far as this Board can learn, however, no negotiations looking to a permanent agreement have taken place, or, if they have taken place, no conclusions have been reached. All employees of the Canadian National Railways and, we think, also those of all other Canadian Railways, except those belonging to the classes before this Board, are, therefore, working under tentative agreements with an understanding that there is to be some further conference and negotiation between the Railways and the men.

The employees with whom this Board is concerned have refused to sign the tentative agreement. In the meantime they are being paid at the reduced rate.

It should be borne in mind that the employees with whom this Board has to deal are largely those known as the less skilled classes and receiving, therefore, a relatively low scale of wages. It should also be noticed that at the time of the hearing of this dispute the better paid classes of railway employees of all the Canadian roads, such as conductors, engineers, firemen, trainmen and telegraphers, had already made a separate tentative agreement with the representatives of all the Canadian roads.

The Board endeavoured to ascertain whether there was any basis on which a settlement between the railways and the men could be brought about by agreement, but was unable to find one. The representatives of the railways took the position that the total amount of the reduction authorized by the United States Railway Board, namely, about 12 per cent must be made. They did, however, indicate that they were prepared to distribute this reduction in any way the men might agree upon. In other

words, they were prepared to consider a pooling arrangement. Just how far this pooling should extend was not clear. This Board was in no position to bring about any pooling arrangement. The men before the Board were, for the most part, the lowest paid employees of the railways. The higher paid employees, including the running trades, were not before us and we were not in any position to say whether the reductions made to them were justified or not. Even within the classes before the Board it was quite impossible to suggest any pooling arrangement which would be acceptable. If a bulk sum decrease in wages could have been left with the men to distribute, something might have been done. Under circumstances where the reduction had already been specifically allocated by the railways any idea of pooling is almost out of the question. In order to increase wages of some men, wages of others would have to be reduced, and human nature is such that few men are likely to admit that their wages are too high, and still fewer to agree to them being reduced.

In justification of the reduction those representing the railways advanced several arguments: Conditions in the United States and Canada are similar, and the United States Labour Board had authorized a reduction after a long investigation. The cost of living within the last year had fallen. The Canadian National Railways are, under the reduced rate, paying as much as other Canadian roads. Wages on the railroads they claimed are not lower, and in some cases are even higher, than those paid by other employers. The Canadian National Railways have been losing money and cannot carry on without reduced wages.

With many of the arguments of the representatives of the Railways the Board was much impressed. Anyone considering these matters in the imperfect manner which must be adopted by a Board of Arbitrators cannot lightly pass over the decision of a tribunal such as the United States Labour Board, arrived at after long consideration, and

with a wealth of material before it. We were, however, at the disadvantage of not having before us anything but the conclusions of the United States Labour Board. We had nothing directly to indicate the grounds upon which they had acted, nor were we given sufficient material to enable us to judge whether conditions in the United States and Canada were similar. From testimony furnished us by the Department of Labour we cannot avoid believing that on account of our more rigorous climate and other causes the general cost of living is usually somewhat higher in Canada than in the United States.

A considerable amount of evidence as to the change in cost of living was submitted. Tables were produced compiled by the Labour Department showing the estimated expenditure of a skilled workman. According to these tables, prices for July, 1920, as compared with those of June, 1921, on the whole showed a decrease of nearly 20 per cent. Food dropped about 34 per cent, clothing about 33 per cent, and sundries about 5 per cent. On the other hand, fuel advanced in price about 3 per cent and rent about 7 per cent. These figures were criticized by the representatives of the men. Particularly it was contended that the expenditures of the family budget do not correctly represent the expenditures of the average family. It was submitted that many common articles of food were omitted and that others were not figured on adequate quantities. Particularly it was contended that the expenditures allowed for fuel and rent by the Labour Department did not represent actual conditions. A total average reduction was admitted of 4 1-3 per cent. It was further contended that since June, the cost of living had slightly increased.

This Board is not called upon to decide accurately what the reduction in the cost of living has been. In fact changes in the cost of living must vary in different localities and with different standards of living. The Labour Department does not claim to have any absolute basis even for the skilled work-

man. All it purports to do is to show variations on a certain assumed and constant basis as to articles and quantities. This Board is convinced, however, that within the year the cost of living was very considerably decreased.

The first significance of reduction in cost of living is that the purchasing power of money has increased, so that with the same money paid to the wage-earner, his real wages, that is to say, wages measured in purchasing power, are increased, and with a reduced money payment, his real wages may still remain the same.

A further significance of a fall in the cost of living is that other classes of the community have been obliged to take a reduced income. Prices of products of the farm and of other basic industries of the country have fallen. No labour board, arbitration board, or government, has any power to control the prices of "wages" of those employed in these industries. This means that the purchasing power of the farmer and others employed in the primary industries, measured in money, has been very much diminished. As a consequence manufacturers and others have been obliged to take lower prices or run their factories only part time. The result has been a downward trend of prices generally accompanied by a downward trend in wages.

With others taking lower returns, whether called wages or by some other name, there is no reason why those engaged in transportation or any other occupation should be exempt from making some contribution to a lower cost of living. Railways and railway employees, must, in all fairness, expect to take lower rates and lower wages.

The Board was not greatly impressed with the statement made as to the financial condition of the Canadian National Railways. It is not our task to deal with the causes of the deficits of these railways, and it is quite evident that the present employees of the railways cannot be held responsible for these deficits. The financial condition of these railways can only enter into the question in so far as it enters into railway conditions generally and financial conditions at large.

What evidence we had before us indicated that the Canadian National Railways were paying at least as much to the classes of employees under consideration as other Canadian roads. This fact was regarded as one of importance.

The rules governing working conditions were not discussed before this Board at any length. In the case of the Auditors' Office in Toronto it was shown that some overtime was paid, but not a large amount. So far as we know the working conditions which have caused so much discussion throughout the country, and which were said to result in extravagant pay being paid to individuals, have little or no application to those employees before us.

While the representatives of the railway management insisted upon the total reduction approximating 12½ per cent being imposed, the representatives of the employees appearing before this Board did not make a stand against any reduction. The whole question with them was one as to the extent of the reduction. Particularly it was contended that the proposed reduction operated harshly against the lower paid men and in many cases were such as to bring the wage of the lowest paid to a point where they could

no longer live in a proper and decent manner.

This Board is in hearty agreement with the contention that changed conditions imperatively demand a general decrease of wages from the highest peak of war and post-war conditions. But we cannot avoid the convictions that the reductions proposed and put into effect are much harder on the lower paid men than on the higher. In the case of the engineers the decrease was said to run from 6.5 per cent to 9.1 per cent of their previous salaries. With the classes before this Board the decreases were much greater. Locomotive cleaners, ashpitmen, firebuilders and coalmen have a reduction from 18.8 to 20 per cent of their former pay. This does not take into account working rules, which are said to benefit the engineers. It must be borne in mind that even a proportionate decrease is very much harder on the man with the smaller income than the man with the larger.

Even within the classes before this Board the method of giving the decrease seems in some cases unfair. For example, all clerks within the classes before us were, with the exception of one office, reduced \$12.24 a month. A reduction of \$12.24 is not a serious matter for a man getting \$200 a month, but it is a very serious matter for a man getting \$100 a month.

It has been contended that the lower paid employees could, at the present time, be replaced without difficulty by others who would take the wages now offered or less. Under existing conditions this is probably the fact. But we cannot believe that the fixing of wages should be entirely left to the hard economic law of supply and demand. Supply

and demand implies struggle with possible strikes and lockouts. The very existence of machinery and the appointment of a Board of Arbitrators seems to carry with it the suggestion that some idea of fairness must be allowed to meliorate the operation of the economic law. This Board would not be prepared as a Board to endorse the general principle of a minimum wage. Much less would it be disposed to recommend the adoption of a minimum wage on one system of railways alone. The Board does, however, think that the railways of the country and more especially, perhaps, the Government railways owned by the people of Canada, in fixing wages must have some regard to the minimum cost of living under frugal, but decent conditions. The Board thinks that some consideration given to this aspect of the question of pay to employees would help to bring about more equitable conditions.

The reduction authorized by the last award of the United States Labour Board was for clerks, \$12.24. This was a flat decrease regardless of the salary that the clerk received. The Canadian National Railways have applied this decrease in the case of all clerks, except those of the Toronto Accounting Department. In the Accounting Department this flat decrease was not put into effect. Instead of it a graded reduction was worked out which helped the lower paid employees. The basis of the reduction in the Accounting Department was as follows:—

\$80.00 per month and less.....	\$5.00
\$81.00 to \$95.00.....	7.50
\$95.00 to \$125.00.....	10.00
\$125.00 to \$150.00.....	12.50
\$150.00 and over.....	15.00

This Board thinks that the plan used in Toronto is much fairer than that applied elsewhere. We think that it should be applied generally in regard to monthly paid employees.

Conditions as to those, other than clerks, and sleeping, dining and parlour car employees, are indicated by the following schedule furnished by the General Auditor of the Canadian National Railways.

CANADIAN NATIONAL RAILWAYS.

STATEMENT OF RATES PAID PRIOR TO AND AFTER REDUCTIONS EFFECTIVE JULY 16, 1921.

Class.	Rate July 1, 1921	Rate July 16 1921	Monthly Pay.		Per Cent Decrease
			July 1, 1921	July 16, 1921	
Freight checker, per month.....	\$ 141.50	\$ 129.26	\$ 141.50	\$ 129.26	8.6
	136.50	124.26	136.50	124.26	8.9
	132.50	120.26	132.50	120.26	9.2
	127.50	115.26	127.50	115.26	9.5
Leaders and stowers, per hour56	.50	116.48	104.00	10.7
	.57½	.51½	119.60	107.12	10.4
Freight truckers or porters, per hour....	.53	.47	110.24	97.76	11.3
	.54	.48	112.32	99.84	11.1
	.55	.49	114.40	101.92	10.9
Loco. cleaners, per hour50	.40	104.00	83.20	20.0
Ashpitmen, firebuilders and coalmen, per hour53	.43	110.24	89.44	18.8
	.48½	.40	100.88	83.20	17.5
Common labourers, per hour	115.00	102.76	115.00	102.76	10.6
Car checkers	120.00	107.76	120.00	107.76	10.2
Baggage masters	150.00	137.76	150.00	137.76	8.2
	to 120.00	to 107.76	to 120.00	to 107.76	to 10.2
Station porters	105.00	95.00	105.00	95.00	10.
	to 110.00	to 100.00	to 110.00	to 100.00	

As we understand it these employees work eight hours a day with very little, if any, overtime. This means that the locomotive cleaners, for example, under the new schedule earn \$19.20 per week, and ashpitmen, firebuilders and coalmen, \$20.64 per week. This Board thinks that even with the reduced cost of living it is almost impossible for the average family to live on these wages. A glance at the schedule given above will further indicate that these employees are practically all of the lower paid classes and that the reductions must be very hard on them.

It is claimed that all of these employees are little more than unskilled labour. This is true in a sense, but is untrue in another sense. It is not necessary for these employees to go through any long training, but most of them are permanent employees and we think that their positions require from them a considerable amount of intelligence and reliability. It is a difficult matter in a case like the present for a Board to do anything for the unskilled labourer, meaning by that, the transitory employee who works here to-day and somewhere else to-morrow. It seems to us, however,

that the permanent though unskilled employee can be dealt with without very great difficulty, and we venture to express the opinion that it would not be merely decent treatment but good business to see that these permanent employees get wages which will make them contented and willing. Thereby a certain esprit de corps is attained which is a distinct gain, not only to the railway management, but also to the business and travelling public.

The recommendations of this Board are as follows:—

1. As we understand that the management has made no reduction in the rates of wages of apprentices we make no recommendations regarding them.

2. The reductions as to stenographers are sustained.

3. The reductions pertaining to wages of sleeping, dining and parlor car employees are sustained. In this connection we desire to add, in the case of sleeping car porters and dining car waiters, that if the Management and the employees will seriously undertake the pioneer reform of abolishing gratuities this Board shall be glad to offer a supplementary report dealing with the wages of employees referred to.

4. Reductions made in salaries of employees getting more than \$125.00 a month are generally speaking sustained.

5. Except in the cases of stenographers and sleeping dining and parlor car employees, we recommend that the reductions of all monthly paid employees getting \$125 or less be in accordance with the schedule applied in the Toronto Accounting Department.

6. In so far as transient labour is before this Board we think the rates fixed are in keeping with present wages in the open market.

7. In the case of all hourly paid men, other than transient labourers, such as loaders in stores, freight truckers or porters, locomotive cleaners, ashpit-men, firebuilders and coalmen, we recommend that the maximum decrease

be not greater than 10 per cent of the wages paid before the reduction. Decreases less than 10 per cent, if any, should stand.

8. In the matter of the additional classes brought before the Board late in its session we do not consider that it is necessary to make any specific recommendation, the recommendation of the Board logically applying to all those before it and the classes of a similar character as well.

All of which is respectively submitted,

(Sgd.) BYRON STAUFFER,
Chairman.
HAROLD FISHER.

Minority Report

Ottawa, November 11, 1921.

To the Hon. Gideon D. Robertson,
Minister of Labour,
Ottawa.

Sir,

I regret that, after full consideration of the evidence submitted to the Board of Arbitration established to arbitrate in the dispute between the Canadian National Railways and certain of their employees, clerks, freight handlers, etc., and members of the Canadian Brotherhood of Railway Employees and of the different matters in dispute, I cannot join in the report filed by the other members of the said Board.

To appreciate the situation of railway employees generally I would point out that increases have been granted to them from time to time under what are commonly referred to as:

(1.) *The McAdoo Award*. General Order No. 27, United States Railroad Administration, issued May 25th, 1918; effective in United States, January 1st, 1918.

(2.) *Supplement No. 7 to General Order 27*. Issued Sept. 1st, 1918; effective in United States September

1st, 1918. To this Supplement there were various interpretations considerably widening the application of the rules for overtime, etc.

(3.) *The Chicago Award.* Decision No. 2 of the United States Railroad Labour Board, issued July 20th, 1920; effective in United States May 1st, 1920.

In the case of the enginemen, trainmen and telegraphers there is another, viz.: the Adamson Act adjustments of 1917, when the 8-hour day was made a basis of adjusting pay of those employees, and, while this had the effect of increasing pay to other classes, this increase is not definitely determinable in the pay of the groups concerned herein.

The McAdoo Award was adopted in Canada on August 1st, 1918. Supplement No. 7 was effective in Canada September 1st, 1918, and the Chicago Award was adopted in Canada in September, 1920, but was made retro-active so as to involve five months' back pay.

From what is known in the United States as the Wage Commission came the original McAdoo Award, and from the United States Labour Board came the Chicago Award. It was this Board that also issued Decision No. 147, being the decision covering the reduction now under discussion.

The Transportation Act (one of the statutes of the United States of America) prescribed how the United States Labor Board must act in dealing with wage matters. The Chicago Award (Decision No. 2) and Decision No. 147, providing for reduction in wages, came about after the Board had therefore considered the following, (this being quoted from Decision No. 2 for brevity):

In arriving at its decision, the Board has taken into consideration, as the Transportation Act prescribes:

- (1) The scale of wages paid for similar kinds of work in other industries;
- (2) The relation between wages and the cost of living;
- (3) The hazards of the employment;

- (4) The training and skill required;
- (5) The degree of responsibility;
- (6) The character and regularity of the employment, and
- (7) Inequalities of increase in wages or of treatment, the result of previous wage orders or adjustments.

Besides the circumstances set out above the Act provides the Board shall consider in determining wages 'other relevant circumstances'. This, it understands, comprehends, among other things, the effect the action of this Board may have on other wages and industries, on production generally, the relation of railroad wages to the aggregate of transportation costs and requirements for betterments, together with the burden on the entire people of railroad transportation charges.

The wage reduction under Decision No. 147 equalled an aggregate reduction in the vicinity of 12½ per cent but it must be borne in mind that the Canadian National Railways have not taken advantage of this full reduction. When increases were granted to employees, the Canadian National Railways and its employees in conference decided upon how such increases should be distributed, and, when reductions had to be made under Decision No. 147, the Canadian National Railways invited its employees to a conference in order that the distribution of such reductions might be made in the fairest possible manner. It is disappointing to know that the employees failed to accept such invitation, and the Canadian National Railways thereupon proceeded to distribute the reductions in as fair a manner as possible. Employees were advised that the company would be pleased to consider and deal with any complaints that followed such distribution.

The Canadian National Railways have, in each case of increase of wages following and including the McAdoo Award, adopted such increases. We have in Canada no permanent board that can exercise the powers of the United States Labour Board, and when decreases came to be the order of the day the Canadian National Railways, with all other railways in Canada, having followed the decisions of the United States Labour Board in regard to advances, felt justified in following such

decisions where reductions were concerned. Aside from the necessity of having a standard by which to be guided (and the necessity of which can readily be admitted) one must realize that the Canadian National Railways are in competition with United States Railways which have followed the decisions of the United States Labour Board. About ninety per cent of the membership of the different international railway unions are employees of United States railways and about ten per cent of such members are employees of Canadian railways.

Such international brotherhoods have a membership of somewhat over two million in all. The Canadian Brotherhood of Railway Employees, which is not an international union in the same sense as the others, has a membership of from five to seven thousand in all. It can easily be seen that the effect of the action of the United States Labour Board was immediately felt by the membership in the international brotherhoods working on United States railways, and naturally this must have influenced the membership employed in Canada. Unlike the other brotherhoods, the Canadian Brotherhood of Railway Employees does not occupy an exclusive field, and other organizations, one of which at least is fully interna-

tional, represent classes also covered by the Canadian Brotherhood of Railway Employees. All the other brotherhoods, except the Canadian Brotherhood of Railway Employees, have entered into tentative agreements like those offered to it. It may be here pointed out that, prior to this Board commencing to sit, a Board with practically similar powers and dealing with a practically similar agreement was sitting to consider the case of similar employees to those represented before this Board but who were in the service of the Grand Trunk Railway Company. Three railway organizations were represented before this Board who were open to receive a similar class of members. Before this Board these three railway organizations accepted a tentative agreement similar to the one under discussion in this case and an agreement to this effect was signed, the signatures of the representatives of the Canadian Brotherhood of Railway Employees being attached. Later this brotherhood, for different reasons which it advanced, sought to withdraw and did withdraw its consent to the tentative agreement.

As to the attitude of railway employees in Canada generally towards the reductions, the following table is self-explanatory:

Group	Number of Employees	Attitude towards reduction.
Clerical forces, etc.....	38,203	Accepted tentatively on all but Canadian National Railways.
Maintenance of Way.....	43,495	Accepted tentative agreement in July, 1921.
Federated Trades.....	49,497	Accepted tentative agreement in July, 1921.
Telegraphers.....	6,908	Accepted by special agreement October, 1920.
Enginemen and trainmen.....	30,918	Accepted by special agreement October, 1920.
Miscellaneous.....	4,793	No protests received.
Unorganized.....	11,356	No protests received.
Total.....	183,170	

Of the aforesaid clerical forces and miscellaneous classes the Canadian Brotherhood of Railway Employees claim to represent on the Canadian National Railways from five to seven thousand.

The foregoing is particularly valuable as comparison is afforded between the number of employees affected by this Board as hereinbefore referred to and the total number of employees as shown in the above.

The attitude of labour generally towards the reduction under decision No. 147 may be gathered from the following extract from "Labor", a weekly newspaper owned by the sixteen associated recognized standard railway labour organizations, which organizations are of international scope and include, amongst others, employees of classes similar to those before this Board:

Executive officers of the five transportation brotherhoods, worn out by the long tension that was broken when the strike order effective October 30th was cancelled, have returned to their respective headquarters, satisfied that definite gains have been made for the members of their organizations.

"I think we have accomplished something," said Warren S. Stone, grand chief engineer of the Brotherhood of Locomotive Engineers, "We have kept back the threatened 10 per cent cut in wages and have prevented the railroads from making arbitrary changes in our rules, as well as forcing some lines that had made arbitrary changes to revoke these orders."

That seems to summarize the position of the other brotherhood executives. While technically the strike was in repudiation of the labour board's wage cut of 12½ per cent, it was actually a protest against the announced intention of the railroads to further reduce wages and interfere with working agreements, many of which have been in effect for many years.

It must be borne in mind that the reference in the foregoing to ten per cent cut in wages is a reference to a cut in addition to the twelve and one-half per cent cut already put in force. The United States railways have not yet abandoned their request for this additional ten per cent cut.

Statistics compiled by the United States Railway Labour Board show that the following is the percentage of cuts in wages made in July, 1921, in different classes, and emphasize the variations from the twelve and one-half per cent cut in the aggregate:—

	Percentage of cut in July.	Percentage still above Dec. 1917 wages.
Supervisory forces.....	6.3	63.4
Clerical and station.....	12.2	64.6
Maintenance of way and unskilled.....	17.4	55.7
Shop employees.....	10.5	54.0
Telegraphers, etc.....	8.9	82.8
Engine service employees	9.4	59.9
Train service.....	10.7	64.5
Stationary engineers and firemen.....	12.7	92.3
Signal department.....	10.0	66.6
Marine department.....	9.8	33.3

It is interesting to consider the different advances made as a result of decisions hereinbefore referred to by making a comparison of the hourly rate of pay earned by employees in the various classes concerned in these proceedings as published in the Dominion Government statistics from 1917 to 1920 and as shown by the Railway Statistics for the twelve months affected by the Chicago Award rates:—

DOMINION GOVERNMENT STATISTICS RAILWAYS COMPILATION.

	1917 c.	1918 c.	1919 c.	1920 c.	1921 c.
Hourly compensation of clerks.....	28	30.7	44.2	63.7	62.50
Section men (rate for track labourers).....	20.6	23.7	36.6	45.9	49.16
Other unskilled labour.....	21.9	25.2	34.2	44.3	46.54
Other station service.....	22.5	25.7	39.0	48.0	54.62
Engine house, watchmen and labourers.....	21.2	24.7	38.6	49.6	52.52

To continue the comparison we might take the weekly cost of living in July each year, including fuel, light and rent, merely as an index.

	July, 1917	July, 1918	July, 1919	July, 1920	July, 1921
Weekly cost..	\$18.37	\$20.66	\$22.02	\$26.92	\$21.55

and we might further consider the following figures being the averages for all Canadian Railway employees:

	1917 c.	1918 c.	1919 c.	1920 c.	1921 c.
All employees average....	28.8	33.1	48.4	62.4	66.11

It will thus be easily seen that, while there has been a drop in the cost of living of approximately twenty per cent since 1920, wages are very considerably higher in proportion in 1921, and the increase in wages all along has been more than would compensate for the increase in the cost of living.

The Department of Labour was good enough to furnish the Board with an expert who explained how the different tables published in the *Labour Gazette* were made up. Criticism offered on behalf of the employees of these tables was practically worthless, as in preparing such criticism, the parties doing so did not appreciate the procedure followed by the Department of Labour.

From the material before us it would appear that, while there were fluctuations from time to time, the drop in the cost of living has been practically the same in the United States as in Canada.

The National Conference Board, an organization in New York of twenty or more industries but having no connection with the Government service, in their report state that the decline in prices in the United States in the past year has been 19.4 per cent. Other authorities place it at from eighteen to twenty per cent. As to how the wages of railway employees have fallen in comparison with the wages of other classes of employees, figures were submitted prepared by the United States Conference on Unemployment which showed "a general estimate of all union wage

scales is about 89 points above the 1913 level" while "railway wages are 126 above".

As showing the general trend of wage reductions, reference was made to the well-known decision handed out by Judge Landis, who recently, in connection with the Chicago building trades, had been agreed upon by the employers and employees to settle their disputes.

Under his decision, taking into consideration working conditions and wages, decreases varied with the type of labour involved, but provided for those running as high as 33 1-3 per cent but averaging somewhere in the vicinity of 12½ per cent.

That the United States Labour Board did not seek to force wages down to the lowest point or anything like the lowest point can be appreciated when it is known that the United States Steel Corporation, one of the largest employers of unskilled labour in the United States and which was paying in February, 1920, an amount equal to fifty cents per hour to such labour, is now, with decreases in wages and in changed working conditions, paying instead an amount equal to thirty cents per hour. The lowest rate for unskilled labour on the Canadian National Railways as provided by the present reduction is forty cents per hour.

Following the example of the Chairman of our Board, I took the trouble to make enquiries from different industrial concerns in Ottawa and at points in Ontario, and learned that unskilled labour was being paid from thirty cents per hour upward. Rates over forty cents per hour were usually the result of special existing conditions or a special existing agreement. It thus seems evident, when one appreciates that the wage scale fixed by the Canadian National Railways is merely a minimum amount that must be paid for different positions, that such minimum is considerably in excess of prevailing rates in different cases.

Conditions affecting labour in the United States of America are bound to

fleet us in Canada, and certainly merited careful consideration by this Board. The decisions of the United States Labour Board represent close study extending over several months at which representatives of all classes of employers and employees had every opportunity of being heard. Having regard to the terms of the Transportation Act hereinbefore referred to, and to the course followed by the United States Labour Board at its lengthy hearings, and to the decreases of wages throughout the United States and Canada and to the decreases in living cost, this Board should not do otherwise than approve the tentative agreement submitted by the Canadian National Railways to its employees. I am more impressed with this view especially since the company continues to emphasize its attitude of

being willing to meet its employees in order to adjust what may seem to be cases calling for special treatment.

I sincerely hope that, following the course adopted by the large bodies of railway employees, the extremely small minority reported before us will see fit to abandon their attitude of refraining from discussion as to distribution of reductions, and instead assist the company in the distribution of a reduction that I feel is fully warranted by existing conditions and which has been accepted by all other railway employees in Canada and the United States.

All of which is respectfully submitted,

(Sgd.) GEO. D. KELLEY,
Member of Board.

COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS

THE Cost of Living Commission appointed on January 21, 1919, to determine every three months the changes in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should correspondingly be increased or decreased, forwarded its report to the Department of Labour for the quarter ending September 30, 1921.* The Commission consisted of Mr. Matthew Gunness, representative of the miners; Mr. Tulley Boyce, representing the operators; and Mr. D. T. Bulger, Fair Wages Officer of the Department of Labour, Chairman.

As in previous investigations, forms were sent out to the merchants and dealers with whom the majority of miners were accustomed to trade in the various localities. The forms contained the same list of groceries, provisions, meats, etc., that was used on previous occasions. The method of computing

the changes for the period under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices of September 30 over June 30, for groceries, provisions, meats, etc., and to add a further two-fifths of this increase, (or decrease) as an equivalent to cover similar increases (or decreases) in clothing, etc. A decrease of 2.14 per cent was ascertained, which amounted to a decrease in wages of $6\frac{1}{2}$ cents per day where the base rate was \$3 per day, and $6\frac{3}{4}$ cents per day where the base rate was \$3.15, the decrease in wages to become effective November 1, 1921, and to apply to all underground service, clerical and office employees.

Retail price lists were received from general merchants and retail dealers in meats in the towns of Nanaimo, Ladysmith, Cumberland, Courtenay, South Wellington, Union Bay, Bevan and Cassidy. Sharp increases were noted in bacon and creamery butter, and slight

*For previous orders see LABOUR GAZETTE, October, 1921, page 1256 and various preceding issues.

increases in jam, barley, canned roast beef, pickles, graham flour, buckwheat and wholewheat flours, cheese, tea, flavouring extracts, prunes and pork. Sharp decreases were noted in sugar, molasses, syrup, canned salmon, canned corn beef, lunch tongue, brooms, vinegar, government standard and pastry flours, rolled oats, yellow cornmeal, standard oatmeal, soda biscuits,

coffee, cream tartar, currants and raisins' and fresh beef and mutton. Slight decreases were noted in white beans, brown beans, tapioca, canned peas, corn and tomatoes, soaps, lard, ham, evaporated milk, evaporated figs, peaches and apricots, matches, fresh veal. No changes were noted in split peas, lima beans, rice, sago and cookies.

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1921

TWO strikes, involving 2,000 workpeople were reported as having commenced during November. There were in existence at some time or other during the month 18 strikes, involving approximately 3,950 employees and a total time loss estimated at 98,099 working days, as compared with 16 strikes, 2,229 workpeople and 54,704 working days in October, 1921; and 21 strikes, 2,295 workpeople and 27,269 working days in November, 1920. The time loss occasioned by the two strikes which began in November was 50,000 working days, while a loss of 48,099 working days is charged to the 16 strikes that commenced prior to November. One of the strikes commencing prior to Novem-

ber was reported as having terminated during the month. The following 17 strikes, involving 3,919 workpeople were on record on November 30; loggers, Ocean Falls; employees of steel and coal companies, Sydney; gauge men, Sydney; compositors, Montreal; compositors, etc., Vancouver; photo engravers, Montreal; photo engravers, Ottawa; printers, Montreal; printers, Ottawa; printers, Toronto; printers, Winnipeg; printers, bookbinders, pressmen, etc., Halifax; typesetters, pressmen and bookbinders, Hamilton; garment workers, Montreal; cigarmakers, Vancouver; shoeworkers at Montreal and St. Hyacinthe, and shoeworkers at Toronto.

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—A strike of a week's duration occurred at Ardley, Alta., when 31 coal miners ceased work because of the company's alleged inability to pay arrears of wages. The strike terminated on November 5, as a result of the mediation of an official of the Department of Labour.

METALS, MACHINERY AND CONVEYANCES.—The only change in this group since the previous month was in the

strike of machinists at Orillia. Though this strike was nominally in effect, yet there was no further time loss in November as the firm was operating, apparently, up to its requirements.

PRINTING AND PUBLISHING.—At the end of the month there were 10 strikes in effect involving about 1,644 employees with an estimated time loss of 41,100 working days. The general strike for the 44-hour week was still in effect, although in Canada it was believed that negotiations would result in a conference of representatives of employers and employees of the trades from Toronto, Montreal, Ottawa and Hamilton. Should this conference materialize and arrive

STRIKES AND LOCKOUTS DURING NOVEMBER, 1921

Industry or Occupation.	Particulars.	No. of employees affected	Time loss in working days
Strikes commencing prior to November, 1921			
LUMBERING— Loggers, Ocean Falls, B.C.....	Commenced August 1. Against increase in working hours. Un- terminated.	80	2,000
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.— Miners, Ardley, Alta.....	Commenced October 28. Against non-payment of wages. Settled by mediation of Department of Labour. Work resumed November 5.	31	124
METALS, MACHINERY AND CONVEYANCES— Employees of steel and coal companies, Syd- ney, N.S.....	Commenced November 22, 1920. For increased wages and improved working conditions. Unterminated.	150	3,750
Gauge men, Sydney, N.S.....	Commenced June 9. In sympathy with employees of the steel and coal companies. Unterminated.	16	400
Machinists, Orillia, Ont.....	Commenced May 9. Employees objected to being taken off their own work and having to do other work. Information received indicates conditions no longer affected.		
PRINTING AND PUBLISHING— Compositors, Montreal, Que.....	Commenced June 14. Objection of men to perform work that came from shop where strike existed. Unterminated.	25	625
Compositors, etc., Vancouver, B.C.....	Commenced May 2. For increased wages and 44-hour week. Un- terminated.	50	1,250
Photo engravers, Montreal, Que.....	Commenced May 2. For shorter hours. Unterminated.....	63	1,575
Photo engravers, Ottawa, Ont.....	Commenced May 2. For increased wages and 44-hour week. Un- terminated.	13	325
Printers, Montreal, Que.....	Commenced July 1. For increased wages and 44-hour week. Un- terminated.	370	9,250
Printers, Ottawa, Ont.....	Commenced June 1. For increased wages and 44-hour week. Un- terminated.	153	3,825
Printers, Toronto, Ont.....	Commenced June 1. For increased wages and 44-hour week. Un- terminated.	775	19,375
Printers, Winnipeg, Man.....	Commenced July 1. Alleged lockout following a refusal of employers to renew agreement. Unterminated.	120	3,000
Printers, bookbinders, pressmen, etc., Halifax, N.S.....	Commenced May 2. For shorter hours. Unterminated.....	45	1,125
Typesetters, pressmen and bookbinders, Hamilton, Ont.....	Commenced May 2. Alleged violation of agreement by employers Unterminated.	30	750
FOODS, LIQUORS AND TOBACCO— Cigarmakers, Vancouver, B.C.....	Commenced May 31. Against introduction of new machinery. Un- terminated.	18	450
LEATHER— Shoeworkers, Toronto, Ont.....	Commenced April 26. Against reduction in wages. Unterminated...	11	275
Strikes commencing during November, 1921			
CLOTHING— Garment workers, Montreal, Que.....	Commenced November 9. Against a reduction in wages and other working conditions. Unterminated.	1,200	30,000
LEATHER— Shoeworkers, Montreal and St. Hyacinthe, Que.....	Commenced November 2. Against a reduction in wages. Un- terminated.	800	20,000

at a successful conclusion, it was thought likely that the strike would terminate in Canada.

CLOTHING. — About 1,200 garment workers went on strike in Montreal on November 9, in protest against an alleged reduction in wages attendant upon the introduction of piece work. Attempts were apparently made by the strikers to settle with individual firms, but these failed, and at the end of the month the strike remained unterminated.

LEATHER. — Eight hundred shoe operatives in Montreal and St. Hyacinthe struck on November 9, in protest against a wage reduction. The firm reported that its employees accepted the reduction and then were induced to strike by International Union officials from Boston, Mass. According to the firm's statement the wage reduction is an average of 7 per cent in Montreal and 10 per cent in St. Hyacinthe. The employees claim that the reduction averages 15 per cent. This strike was un-terminated at the end of the month.

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING OCTOBER 1921

THE following details with regard to strikes and lockouts in the United Kingdom during October, 1921, based on returns from employers and workpeople, are taken from the November issue of the British *Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.

—The number of trade disputes involving a stoppage of work reported to the Department as beginning in October, was 64, as compared with 57 in the previous month, and 71 in October, 1920. In these new disputes nearly 16,000 workpeople were directly involved, and about 2,000 indirectly involved (i. e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition to the numbers involved in new disputes about 7,000 workpeople were involved, either directly or indirectly, in 49 other disputes which began before these disputes, 11, directly involving

nearly 1,000 workpeople, were settled in October and were still in progress at the beginning of that month. The total number of new and old disputes in progress in October was thus 113, involving about 25,000 workpeople, and resulting in a loss during October of nearly 200,000 working days.

CAUSES.—Of the 64 new disputes, 35, directly involving about 9,600 workpeople arose out of proposed reductions in wages; 18, directly involving nearly 2,300 workpeople, on other wages questions; 7, directly involving over 3,600 workpeople, on questions respecting the employment of particular classes or persons; and 4, directly involving about 100 workpeople, on other questions.

RESULTS. — During October settlements were effected in the case of 29 new disputes, directly involving about 11,000 workpeople, and 22 old disputes, directly involving nearly 5,000 workpeople. Of

favour of the workpeople; 19, directly involving over 8,000 workpeople, in favour of the employers; and 21, directly involving about 7,000 workpeople, were compromised. In the case of 5 disputes, directly involving nearly 1,000 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades and indicates the number of workpeople involved (whether directly or indirectly, at the establishments concerned, and the approximate time lost during October in all disputes in progress:—

Groups of Trades.	Number of disputes			Number of workpeople involved in all disputes in progress in October.	Aggregate duration in working days of all disputes in progress in October.
	Started before October 1.	Started in October.	Total.		
Building	6	6	12	1,000	30,000
Mining and quarrying..	5	20	25	14,000	72,000
Metal, engineering and shipbuilding.....	17	8	25	4,000	33,000
Other trades.....	19	20	39	4,000	40,000
Employees of Public Authorities	2	10	12	2,000	12,000
Total, October, 1921..	49	64	113	25,000	187,000
Total, September, 1921	43	57	100	20,000	146,000
Total, October, 1920..	93	71	164	1,200,000	13,474,000

CONVENTION OF THE COMMERCIAL TELEGRAPHERS' UNION OF AMERICA

THE eleventh regular and eighth biennial convention of the Commercial Telegraphers' Union of America, was held at Toronto, Ont., on October 3 to 8 under the chairmanship of Mr. Roscoe H. Johnson, the international president. This was the first convention of the Union to be held in Canada. About 60 delegates were present, representatives of practically every section of the North American continent.

Reports to the convention showed the Union in better condition than at any time since 1907 especially in the broker division, but there was little progress in the organizing of workers of the Western Union and Postal Telegraph companies. An increase in membership of 3,145 was reported for the two fiscal years ended June 30, 1921, of which 83 per cent were United States members and 17 per cent Canadian. The income for the period was \$72,608 and the expenditure \$63,793. Indebtedness amounting to \$14,365 had been reduced to \$4,890 during the two years. Since the 1919 convention, two wireless divisions

were chartered in Canada, the Canadian Marconi Wireless Division No. 59 and the Canadian Government Wireless Division No. 65. The reports state that the Marconi division secured for its members an increase in wages of approximately 60 per cent, with highly improved working conditions, the present wage for radio operators commencing at \$70 a month with yearly increases of \$10 a month until a monthly wage of \$120 is reached; the Government division had not secured a schedule but had held conferences with government officials in Ottawa and the West and it hopes for a schedule and improved conditions at an early date.

Reference was made in reports to the amalgamation of the Great Northwestern Telegraph, the Canadian National Railway Telegraphs and the Grand Trunk Pacific Telegraphs which were taken over by the Canadian government and re-organized under the name of Canadian National Telegraphs. As a result of this amalgamation, the Order of Railroad Telegraphers and the Commercial

Telegraphers' Union of America negotiated an agreement in March, 1921, to act jointly for the linemen of the re-organized company.

The convention decided to abolish the Mutual Benefit Department and to substitute a death benefit fund, and a committee was appointed to draft a plan for such a fund by March 1, 1922, to be submitted to the referendum vote of the membership for acceptance or rejection. A resolution was adopted in favour of a principle of universal workmen's health insurance in which it was recommended that proposed plans shall include "liberal medical and financial aid, strong financial pressure for the prevention of illness, and a democratic method of management which shall give proper representation to labour and shall not allow commercial insurance companies to reap profits from the illness of workers." The delegates also voted in favour of giving preference when making purchases to goods bearing the union label and to patronize only union shops and stores. The convention decided in favour of an assessment of one dollar per member per week, beginning October 15, to

be levied on all leased wire divisions for the purpose of combating insidious efforts to disrupt the organization of telegraphers in this field which includes brokers and press operators. It also decided to raise the semi-annual per capita tax, except in the case of Canadian National Telegraph and Canadian Pacific Railway clerks, from \$2.50 to \$4. The convention also voted to support the United States Department of Labour and to oppose any efforts that may be introduced for the purpose of weakening or destroying its various bureaux.

Mr. Paul F. Schnur, Chicago, the retiring secretary, was chosen by the Canadian delegates as a vice-president to devote his entire time to the interests of the Union within the Dominion. It is understood that Mr. Schnur will have temporary headquarters at Montreal. The other officers elected were: International president, Roscoe H. Johnson (re-elected); vice-president, Western Brokers' Division, O. L. Newcomer; vice-president, New England Brokers' Division, W. E. Conry; International secretary-treasurer, Frank B. Powers, Minneapolis, Minn.

ANNUAL CONVENTION OF THE INTERNATIONAL PHOTO-ENGRAVERS UNION

THE twenty-second annual convention of the International Photo-Engravers' Union held at Toronto, Ont., on August 15 to 20, under the presidency of Mr. Matthew Woll, was attended by 45 delegates representing 25 local unions or approximately 85 per cent of the membership, there being 6,480 members in the Photo-Engravers' Union and 103 in the Commercial Artists' Union.

Among the subjects dealt with in the president's report were wages, production costs, prices; the 44-hour week; the right of members to foremanship; attacks against the union and its activities; the Photo-Engravers' Joint Industrial Council; the renewal of the arbitration

agreement with the American Newspaper Publishers; the agreement between the Union and the United States Federal Board of Vocational Education to assist in the rehabilitation of disabled soldiers, sailors and marines, in which it was recommended that such persons afflicted by chest disorders having a tendency toward tuberculosis should not enter in training for photo-engraving; the need for an unemployment fund; the need for accurate statistical information, with a recommendation that the Union establish its own avenues for such information; and the danger of teaching photo-engraving in schools and prisons. The attitude of certain employers of

union labour in seeking to compromise with "open shop employers" was declared to be confusing and it was felt that a 48-hour week would not satisfy this element. Thirty-seven new shops were reported as opened during the year of which 34 were under union conditions. The report recommended that strikes should not be encouraged by the Union, but if forced to resort to a strike or lockout that they should carry the contest to a conclusion. The method of determining wages upon a cost of living basis was declared to be contrary to the principles of the Union in that the products of industry in excess of what is necessary to enable the worker to live go to the employer, the landlord, and the capitalist. Income and prices, states the report, should be vital factors in determining wage rates. The need for accurate information on the cost of production was emphasized and the union was advised to assist in maintaining and stabilizing existing prices of engravings, and in eliminating waste and delay, and to impress employers with the need for installing proper accounting methods and making audits available to the Union. Educational requirements, the time to attain full proficiency, precision and closeness of attention exacted, responsibility of opportunity for causing loss, discomfort, injury, danger to health, unemployment and a relative valuation of all these factors, were suggested as additional elements in wage-determination. The president recommended that the Photo-Engravers' Joint Industrial Council undertake a survey of the entire industry along the above lines, and that before local unions change or alter existing wage agreements, the executive council be empowered to deal with these agreements as justified by the proposed wage survey. With respect to the Joint Industrial Council, the report suggested that good could be accomplished through the Council in matters of investigation, promoting intelligence, inculcating a spirit of pride of workmanship and mutual co-operation and such other matters as

were permitted by its constitution, and it recommended that while the Council devoted itself to such matters it should receive the support of the Union; but if its activities were perverted into channels of controversy or devoted to the fixing of wages or to the making of specific wage agreements or along other lines not permitted by the constitution, that the executive council be directed to take steps to dissolve the organization.

The secretary's report showed the receipts for the fiscal year ended May 31, 1921, as \$176,416 and the expenditures as \$150,216, of which \$57,497 was expended for strike benefits, \$7,500 for funeral benefits and \$18,897 for tuberculosis benefits. There were 36 labels issued during the year as compared with 63 in 1920.

The convention adopted the recommendations of the president with regard to strikes and lockouts, and with regard to the Joint Industrial Council. The proposed wage survey was endorsed and it was recommended that it should include money invested in the industry and in each particular shop, and the number of actual producers engaged to carry the overhead expense, and that the Union should co-operate with employers in the use of cost-finding systems for the determining of production costs. The convention was opposed to the establishing or operating of photo engraving schools by any institution or other interest. A motion was adopted in favour of the union having jurisdiction over foremen or superintendents employed in engraving departments and actually engaged in producing and supervising work. The executive council was instructed to refuse to sanction agreements that do not provide for a working week of 44 hours or less, and also agreements that do not provide for proper light and ventilation in the various departments of photo engraving. The executive council was also instructed to devise a system of quarterly reports to be filled out by each local union, to provide information respecting

shop statistics, also practices, and conditions of open shops in different localities and other essential information. The executive council was also instructed to submit an out-of-work benefit plan to the next convention, and members of local unions were requested to temporarily contribute to a fund for the unemployed members rather than to lose more in a permanent way in the form of reduced wages. In view of the allegation that Canadian employers have induced photo engravers in Great Britain to accept positions in Canada by misrepresentation of labour and economic conditions, the International president was instructed to bring the matter to the attention of the Dominion government and to forward monthly to the

secretary of the society in Great Britain a full report of conditions as to work and unemployment among the members of the Union and especially as to Canadian locals. The convention favoured an alliance with the International Stereotypers and Electrotypers' Union and it urged the International officers to endeavour to arrive at an understanding with the Lithographers' International Union in regard to their rights in the off-set plate-making field.

It was decided to hold the 1922 convention in Chicago.

The following officers were all re-elected: Matthew Woll, president; Theodore E. Griefzu, first vice-president; and Henry F. Schmal, secretary-treasurer.

SECOND INTERNATIONAL CONGRESS OF WORKING WOMEN

THE Second International Congress of Working Women was held at Geneva, Switzerland, from October 17 to 25. Delegates were present from Belgium, Cuba, Czecho-Slovakia, France, Great Britain, Italy, Norway, Poland, South Africa, Switzerland and the United States. There were also visitors from various countries including China, Japan and Roumania; and fraternal delegates from the Women's International League for Peace and Freedom, the International Woman Suffrage Alliance, and the World's Y. W. C. A.

The Congress founded the International Federation of Working Women, the need for a permanent council being a matter discussed at the first congress at Washington in October-November, 1919. The objects of the Federation are: (1) to promote trade union organization among women; (2) to develop an international policy giving special consideration to the needs of women and children and to examine all projects for legislation proposed by the International Labour Conference of the League of Nations; (3) to promote the appointment of working women on organiza-

tions affecting the welfare of the workers. It will admit only trade union organizations affiliated with, or whose aims are in accord with the International Federation of Trade Unions (Amsterdam). The secretariat of the new organization will be located in London, England, for the next two years. Mrs. Raymond Robins, of the United States, the chairman of the Congress, is its president, and Dr. Marion Phillips and Mrs. Harrison Bell, both of Great Britain, are secretary and treasurer respectively. The vice-presidents are: Belgium, Miss Burniaux; Cuba, Mrs. Laura de Zayas Bazan; Czecho-Slovakia, Mrs. Bozena Kubickova; France, Miss Jeanne Bouvier; Great Britain, Miss Margaret Bondfield; Italy, Signora Cabrini Casartelli; Norway, Mrs. Betzy Kjelsberg; Poland, Miss Sophie Dobrzanska; South Africa, Miss Fitzgerald; Switzerland, Miss Monnier; United States, Mrs. Maud Swartz.

Disarmament, unemployment, agricultural problems, the prevention of anthrax among textile workers, and protection from lead poisoning were among other topics discussed. The Congress

decided in favour of a policy of total disarmament, and Miss Kate Manicom, of the Workers' Union of Great Britain, was chosen to represent the Federation at Washington, U. S. A., in presenting a message to the President of the United States with respect to the disarmament conference. The re-establishment of world trade was considered the only solution to the unemployment problem and the various countries were urged to take concerted action for the stabilization of the exchanges and the extension of credits. It was stated that reductions in wages aggravated unemployment conditions by decreasing the purchasing power of the workers. A motion was adopted that all workers in offices, factories, shops and agriculture should benefit from all social laws without distinction as to colour, race, religion or sex. It was felt by the Congress that it would be possible to regulate the working day in agriculture to 8 hours, to cause unemployment to disappear through land improvement, afforestation, etc., and to protect women and children under the application of the Washington conventions. The Congress took issue with the governments of

France and Switzerland that agricultural workers do not come under the jurisdiction of the International Labour Organization. Recommendations of Signora Casartelli of Italy that agricultural workers must not sleep in stables, that each worker should have one bed which should be properly aired, that where necessary the workers' rooms must be properly heated, and that separate accommodation must be provided for both sexes under sanitary conditions were adopted by the Congress which was shocked by conditions as described in Italy. The Congress recommended that in order to prevent the spread of anthrax among textile workers the governments should require the proper disinfection of all wool at the ports of embarkation, and that scientific methods for dealing with the animals themselves should be discovered. Another resolution which was adopted demanded that as substitutes for white lead in industry are now available, its use should be prohibited in industry, and pending the accomplishment of this end it recommended the use of well-known preventive devices by which workers will be protected from lead poisoning.

RECENT MINIMUM WAGE ORDERS AFFECTING FEMALE EMPLOYEES IN ONTARIO, MANITOBA, SASKATCHEWAN AND BRITISH COLUMBIA

THE present article relates to recent orders and amended orders issued by the Minimum Wage Boards of the provinces of Ontario, Manitoba and Saskatchewan. Reference is also made to an earlier order of the British Columbia Minimum Wage Board rescinding portions of an order issued in September, 1919.

Minimum Wages in Retail Stores in Ontario

Order No. 6 of the Ontario Minimum Wage Board, issued on November 15, applies to saleswomen, cashiers, parcelers, messengers and other employees working with the saleswomen, and not on the office of operative staffs,

in the retail stores in cities in Ontario having more than 50,000 population, excepting Toronto. The regulations governing wages in retail stores in Toronto were contained in Order No. 3, which was outlined in the *LABOUR GAZETTE* for September, 1921 (page 1156).

It is stated that no decision has been reached by the Board regarding wages in smaller centres, for the reason that practically all the young women employed in stores in towns and villages live at home and no boarding house rate is discoverable. The Board, it is understood, will conduct an inquiry into the cost of living in such centres before determining upon a minimum wage scale.

Order No 6 provides that no experienced female employee of the class named above, of 18 years or over, may be paid at a less rate of wages than \$12 per week. The minimum rate for inexperienced female employees of 18 years or over is \$10 a week for the first 6 months, and \$11 a week for the second 6 months, after which they shall be considered as experienced adult employees. For girls under 18 years of age the minimum wage is fixed at \$8 per week for the first 6 months, \$9 per week for the second, \$10 per week for the third, and \$11 per week for the fourth six months of her employment in the industry, after which period she is considered an experienced employee. This schedule may continue after a worker passes the age of 18 years, but she shall in no case receive less than the wages prescribed for an inexperienced adult of her own age. An employee reaching the age of 18 years without experience in selling goods must be paid at least \$11 per week during the first six months as a saleswoman, after which she will be entitled to the full minimum wage. Inexperienced workers may not form more than 25 per cent of the total female working force, except where such force is less than four. Females working less than 36 hours in any one week are considered as part time employees and as such are entitled to the minimum rate reckoned on an hourly basis. Violations of the order are punishable under Section 22 of the Act, which provides a penalty for each offense of \$50 to \$500, or two to six months imprisonment. Any female employee not being paid at least as much as required by the order is asked to report to the Minimum Wage Board, Spadina Crescent, Toronto. The previous orders of the Board were summarized in the *LABOUR GAZETTE* for September, 1921, pages 1156-7.

Order standardizing minimum wages in Manitoba

The *Manitoba Gazette*, November 26, 1921, contains an order of the Minimum Wage Board of the Province standardizing the regulations previously made for female employees in the following

industries: Abattoirs, Cigars, Confectionery and Biscuits, Creameries, Drugs, Groceries, Macaroni and Vermicelli, Paper Box, Pickles, Soap and Yeast. These revised regulations, which are summarized below, will in future be known as Regulation 1.

The earliest orders of the Board, which were reproduced in the *LABOUR GAZETTE* for December, 1918 (page 1123), covered the industries mentioned above, except cigars and drugs. These two industries were dealt with in subsequent orders (see *LABOUR GAZETTE*, January, 1919, page 62). The order now issued raises the minimum wage for female employees in the prescribed industries throughout the Province to the level already fixed by special orders for Winnipeg, St. Boniface and St. James (see *LABOUR GAZETTE*, April, 1920, page 467). Regulation 1, as now amended, is as follows:—

MINIMUM WAGE BOARD OF MANITOBA.

REGULATION 1.

Governing the occupation of female employees in the following industries: Abattoirs, Cigars, Confectionery and Biscuits, Creameries, Drug, Groceries, Macaroni and Vermicelli, Paper Box, Pickles, Soap, Yeast.

I. Conditions of labour:

(1) Cleanliness—Every room and the floors, walls, ceilings, windows, and every other part thereof, and all fixtures therein, shall at all times be kept in a clean and sanitary condition.

(2) Drinking Water—A sufficient quantity of safe, fresh drinking water within reasonable access of all workers, and on the same floor as any regular working room, shall be provided with sanitary appliances for drinking. A common drinking cup shall not be used. When the water is iced the ice shall not be in the same container as the water.

(3) Lighting—Artificial illumination in every workroom shall be installed, arranged, and used, so that the light furnished will at all times be sufficient for the work carried on therein, and prevent unnecessary strain to the vision or glare to the eyes of the worker.

Each workroom shall be lighted from outdoors, with windows at least equal in size to one-eighth of the floor space, and opening on a street, lane or court at least ten feet wide, except where the work requires a low temperature or a subdued light.

(4) Ventilation—There shall be 400 cubic feet of air space for each employee, in each workroom. All windows and sashes, except

show windows, shall open freely. Air shafts shall provide for a free circulation of fresh air. Storm sashes shall either be on hinges or have a portion at least eighty square inches in size which can readily be opened. In any workroom which cannot be ventilated by these means, mechanical appliances shall be installed.

(5) Toilet Rooms—There shall be provided, suitable and convenient toilets separate from those used by the opposite sex, and the number of such toilets shall be not less than one to every twenty female persons employed at one time, or fraction thereof. Such toilets must be thoroughly ventilated and open to the outside air, and must be kept in a clean and sanitary condition, and privacy assured at all times.

(6) Wash Basins—Wash basins shall be provided in at least the proportion of one to twenty female persons employed at one time, or fraction thereof, and shall be separate from those used by the opposite sex. Individual towels, either cloth or paper, shall be furnished to the workers, and shall be kept in a clean and sanitary condition.

(7) Temperature—There shall be a thermometer in each workroom, and the temperature during working hours shall be between 60 deg. and 75 deg. Fahrenheit, except when the temperature outdoors exceeds 75 degrees Fahrenheit.

(8) Health and Injuries—All machinery and danger points shall be protected as far as possible by the safety devices known. All protection possible against occupational diseases shall be provided. Each establishment shall keep a First Aid kit to be approved by the Bureau of Labour, and at least one reliable member of the working force shall be trained in its use. A couch or stretcher shall be provided for emergencies, and where no dressing room or similar apartment exists, a screen shall be provided.

(9) Lunch and Rest Room—Where female employees remain for lunch, suitable provision shall be made for dining and rest purposes.

2. Hours:

(1) Hours of Labour—The hours of labour shall be not more than nine (9) hours in any day nor more than forty-eight (48) in any week. These hours shall be so arranged that each female employee shall receive one afternoon half holiday each week. No female employee shall work between 9.00 p.m. and 7 a.m., nor between 12 o'clock Saturday night and 12 o'clock Sunday night.

(2) Overtime—Overtime may be worked only on permit from the Bureau of Labour, not oftener for any female employee than 30 days in one year. No overtime to exceed three (3) hours in any day nor six (6) hours in any week. No minor under seventeen years of age shall work overtime. There shall be extra pay at not less than the regular rate for all overtime worked.

(3) Lunch Hour—At least one hour shall be allowed for lunch.

(4) Delays—An employee waiting on the premises as required by the employer shall be paid for the time thus spent.

3. Wages:

(1) Methods of Payment—Wages shall be paid weekly and after each week's wages have been earned they shall be paid within three (3) days.

(2) Notice to be Given—After four weeks employment one week's notice shall be required on the part of the employer in dismissing an employee, and on the part of the employee on leaving employment, except in the case of flagrant insubordination on the part of the employee or flagrantly unjust treatment on the part of the employer.

(3) The Minimum Wage—No experienced female employee of eighteen years of age or over shall be paid wages at a less rate than eleven dollars (\$11) per week.

(4) Statutory Holidays—No reduction shall be made from the Minimum Wage for statutory holidays.

(5) Adult Learners—No inexperienced female employee of eighteen (18) years of age or over shall be paid wages at a less rate than nine dollars (\$9) for the first three months after entering the factory, and ten dollars (\$10) for the second three months, after which period of six months she shall be considered an experienced employee.

(6) Minors—No inexperienced female employee under eighteen (18) years of age shall be paid wages at a less rate than eight dollars (\$8) for the first four months after entering the factory and nine dollars (\$9) for the second four months, and ten dollars (\$10) for the third four months, after which period of twelve months she shall be considered an experienced adult and shall receive not less than the minimum wage of eleven dollars (\$11) per week.

The number of learners and minors in any factory shall not exceed 25 per cent of the total experienced female employees. No girl under fifteen years of age shall be employed.

4. Board and Lodging, etc.:

When lodging is furnished by the employer, there may be deducted from the wage a sum which shall be not more than two dollars (\$2) per week, and for board, not more than four dollars and fifty cents (\$4.50) per week, and for for both lodging and board not more than six dollars (\$6) per week.

5. Permits of Exemption:

The Board may issue a permit upon application therefor to any employer, granting modification of or exemption from these regulations. Such permits will be issued only in cases of exceptional conditions arising.

6. Penalty:

Any violation of these regulations is punishable by fine or imprisonment, or both. See "The Minimum Wage Act," Section 17.

7. Posting of Regulations:

Each employer shall keep a copy of these regulations posted in a conspicuous place.

This order becomes effective and of full force and effect from this date [November 26, 1921].

Amended Orders for Female Employees in Saskatchewan

Orders 1 to 4 of the Minimum Wage Board of Saskatchewan were re-published, with some minor amendments, in the *Saskatchewan Gazette* dated October 31, 1921, coming into force on November 15. Orders No. 1, No. 2 and No. 3 were outlined in the LABOUR GAZETTE for October, 1919, (page 1240) and Orders No. 1 and No. 4 (as subsequently amended) were outlined in the issue of September, 1920 (page 1225).

Order No. 1 governs shops; No. 2, laundries and factories; No. 3, mail order houses, and No. 4, hotels, restaurants and refreshment rooms. The regulations governing conditions of labour are identical in the four orders, except that

the regulation as to temperature contained in the first three orders is not included in Order No. 4. These regulations as to conditions are similar to those in force in Manitoba, which are printed above, but they differ from the latter in some details, as in the number of cubic feet of air space to be allowed for each employee in a work room, the number being 300 cubic feet for Saskatchewan as compared with 400 for Manitoba workrooms. Moreover the Saskatchewan orders omit the regulations which provide for employees in Manitoba in respect to Health and Injuries, and Lunch and Rest Rooms. The regulations as to wages and hours remain practically unchanged, but for learners in laundries and factories the minimum rate of wages is raised from \$12 to \$12.50 per week during the third six months of their employment. The following table recapitulates the requirements of Orders Nos. 1 to 4, in respect to wages and hours for female employees operating within the cities of Saskatchewan.

TABLE OF WAGES AND HOURS FOR FEMALE EMPLOYEES IN SASKATCHEWAN.

Industry.	Hours			Minimum Weekly Wage			Remarks.
	Per day	Per week.	Skilled Adults.	Learners.			
				1st Period 6 months	2nd Period 6 months	3rd Period 6 months	
(1) Shops and stores.		48*	\$15.00	\$9.50	\$11.00	\$13.00	If workers are employed for less than 48 hours per week the minimum wage may be proportionately reduced.
Millinery.		48*	15.00	5.00††	7.00	10.00	
Dressmaking, tailoring and fur sewing.		48*	15.00	5.00	8.00	12.00	
(2) Laundries and factories.		48*	14.00	9.50	11.00	12.50	
(3) Mail Order Houses		48*	14.00	8.00	10.00	12.00	
(4) Hotels, Restaurants and Reifreshment Rooms.	10	48 or 56 if establishment is open 7 days per week, with overtime over 48.	14.00†	3 months 12.00†			Workers considered experienced after 3 months.
Kitchen employees.	10	do	12.00†				No female under 16 to be employed in a hotel, restaurant etc.; no female under 18 to be employed after 8 p.m.

*Longer hours only permitted on special permit in writing from the Secretary of the Board.

†\$5.25 of this amount may be deducted for board, and \$2.50 for full week's lodging.

††A probationary period of 6 weeks, for which no wages are stipulated, is allowed.

Rescinding Order Affecting Apprentices in British Columbia

In British Columbia the order of the Minimum Wage Board governing the manufacturing industry (See LABOUR GAZETTE, October, 1919, page 1238) was subsequently amended by the rescinding of the sections which fixed the wages of beginners and learners. The original order provided that girls under 18 years of age should receive at least \$10 per week, with an additional dollar every six months until the general minimum rate of \$14 per week should be reached, and that in any branch of the manufacturing industry in which apprentices

are not usually employed the employer could pay a female employee of 18 years of age or over a minimum wage of \$12 a week during the first three months of her employment. The foregoing provisions have since been rescinded. The Board also abrogated the regulation by which special licenses for employing females under 18 years at lower wages than the minimum rate might be issued in branches in which apprentices were usually employed. A new order is now under consideration by the Board in relation to female learners and inexperienced workers in the various branches of the manufacturing industry.

COAL STATISTICS OF CANADA

Preliminary Statistics for the half-year ending June 30, 1921

THE Mining Branch of the Dominion Bureau of Statistics has issued a preliminary report on coal statistics of Canada for the half-year ending June 30, 1921, subject to revision. Comparative figures are given for the corresponding periods in 1919 and 1920, and a series of index numbers shows the relation of the output, imports or exports, as the case may be, for the first half of the years, 1919 and 1921, in comparison with the base year, 1920, for which the value of 100 was taken in every instance. The output of coal from Canadian mines during the first six months of this year declined to 86 per cent of the amount produced during the corresponding period last year but was 5 per cent in excess of the output for the same period during 1919. With the exception of New Brunswick, none of the provinces showed an output equal to the 1920 record. New Brunswick produced 104 per cent of its 1920 output and the other provinces follow in the order named: Saskatchewan, 94 per cent; British Columbia, 91 per cent; Nova Scotia, 87 per cent; Alberta, 79 per cent. The total value of coal shipped during the period amounted to \$32,882,953 and the average selling price reported from the different coal-producing areas ranged from \$2.43 a ton for lignite coal in Saskatchewan to \$8.53 a

ton for anthracite in Alberta. The average for the Dominion was \$5.75. The following table shows the output and shipments in tons, the total value and the average value per ton of the different kinds of coal shipped in the various provinces.

COAL BY PROVINCES AND GRADES FOR THE SIX MONTHS ENDING JUNE 30, 1921.

Provinces	Output	Shipments	Total Value	Average Value per ton.
Nova Scotia.— Bituminous...	2,750,319	2,257,261	\$14,536,760	\$6.44
New Brunswick— Bituminous...	69,230	65,768	377,508	5.74
Saskatchewan— Lignite.....	145,394	136,670	332,108	2.43
Alberta— Anthracite....	46,402	10,357	88,419	8.53
Bituminous....	1,261,080	1,172,804	5,711,555	4.87
Lignite.....	1,125,312	979,021	4,405,594	4.50
Total for Alberta.....	2,432,794	2,162,182	10,205,568	4.72
British Columbia— Bituminous....	1,385,323	1,094,405	7,431,009	6.79
Total for Canada.....	6,783,060	5,716,285	\$32,882,953	\$5.75

The output by months for the whole Dominion for the different classes of

coal, from January to June, 1921, was as follows:—

	Anthracite	Bituminous	Lignite
January.....	9,219	1,052,391	307,184
February.....	6,106	963,287	233,585
March.....	6,954	895,105	231,907
April.....	9,772	770,704	175,335
May.....	5,378	864,642	128,198
June.....	6,973	919,323	195,497
	46,402	5,465,952	1,270,706

The total output of coal of all kinds in the various provinces during the first half of the three years under consideration was as follows:—

	1919	1920	1921
Nova Scotia.....	2,795,953	3,149,070	2,750,319
New Brunswick.....	87,196	66,211	69,230
Saskatchewan.....	134,546	153,877	145,394
Alberta.....	2,040,280	3,044,781	2,432,794
	6,355,532	7,929,269	6,783,060

The importations of coal during the first half of 1921 were 104 per cent of the amount of anthracite brought in during the same period of 1920 and 132 per cent of bituminous, and the exports of Canadian coal declined from 1,278,957 tons in the first half of 1920 to 869,004 tons in the first six months of the present year.

The output from Canadian mines plus the amount imported and less the quantities exported, leaves an amount which may be called the "Coal Supply". The coal supply in Canada for the first six months of 1921 was 14,233,302 tons, as compared with 13,419,021 tons in 1920, and 12,130,794 tons in 1919.

WORK OF THE MANITOBA JOINT COUNCIL OF INDUSTRY

THE Manitoba Industrial Conditions Act, 1919, which was printed in the LABOUR GAZETTE for April, 1919, on pages 492-494, provides for the appointment of a Council of five members, two selected as representing employers, and two as representing employees, with an impartial chairman. The Council was given wide powers of intervening in industrial disputes, either actual or threatened, investigating conditions of employment, cost of living and other matters. A year later the Act was amended in order to bring it more into harmony with the views of organized labour. By these amendments the right of employers and employees to organize for any lawful purpose was recognized; the right of individual or collective bargaining was recognized, and any dispute as to the method or conditions of such bargaining had to be submitted to the Joint Council for determination; the Council was instructed to investigate any agreement, when a complaint had been lodged that it injuriously affected the public; the power of the Council to

declare in force certain rules in regard to industrial disputes was withdrawn.

The Joint Council, which was appointed in April, 1920, reports considerable success in averting strikes and lock-outs. Out of twenty cases of differences between employers and workers dealt with during the first year of operation, settlements acceptable to both parties were effected by the Joint Council in eighteen cases. One case was in process of adjustment at the end of the year, and in only one case were the suggestions of the Joint Council declined. In some cases one of the parties to the threatened dispute appealed to the Joint Council, and in other cases the Joint Council intervened without any request being made and succeeded in averting a number of strikes, some of which would have involved severe losses to the employers and workers directly concerned and to the community at large. In dealing with differences between employers and their workers, the Council has followed certain general

principles which have been set forth by the chairman, Rev. C. W. Gordon, as follows:

1. The service of the community is the supreme objective in industry.
2. The human element is the supreme consideration in industrial activity.
3. The highest interests of all concerned in industry are secured only by co-operation of all.
4. Differences of opinion are inevitable. The only sane method of settlement is by consideration, not by the club.
5. Agreements once accepted must be preserved during their lifetime.
6. The spirit of an agreement must override the letter, if conflict between spirit and letter should appear.
7. Little troubles removed make for peace.

The rights of workmen were defined as follows:—

1. Trade union activities which do not interfere with duty may not be penalized.
2. A living wage is every worker's right—a wage which enables the worker to live in decency and comfort.
3. Every worker has the right of appeal against any decision of his employer.
4. All workers permanently employed should receive a reasonable amount of holiday time.
5. The rates of wages involve such factors as cost of living, permanency, hazard, strain,

period of activity, skill required, training required, brain power involved.

The rights of employers were defined as follows:—

1. Continuity of work must be preserved.
2. A full day's work must be given in a full day's time.
3. Discipline must be preserved for the purpose of co-ordinate and continuous effort.
4. Insubordination involves prompt penalty.
5. Management must be untrammelled — a single hand must be on the wheel of control.

It is stated by the chairman that the Joint Council has persistently asserted the binding character of agreements and the necessity of maintaining contracts unbroken even at the cost of inconvenience and financial loss, and that decisions rendered in accordance with this principle have invariably been accepted without question by the disputants. In other cases where there have been differences of opinion as to the interpretation of an agreement, the Council has been successful, not only in settling the question of interpretation, but in re-writing contentious clauses so as to remove possibilities of future misunderstanding.

WORKMEN'S COMPENSATION IN ONTARIO AND MANITOBA DURING 1920

Report of Ontario Board

THE report of the Workmen's Compensation Board of Ontario for 1920 shows that the total benefits awarded during the year amounted to \$7,780,145 (\$7,076,439 for compensation and \$703,706 for medical aid) as compared with \$4,192,860 in 1919, and \$3,884,995 in 1918. The increase is attributed largely to increased benefits provided under amendments made to the Act in 1920 and especially to the increase in pensions for fatal accidents of previous years, which amounted to \$2,289,249. Notwithstanding the increased scale of benefits the rates of assessment continued to be low; the

estimated average based on provisional figures being \$1.25 per \$100 of payroll in 1920, as compared with \$1.22 in 1919, and \$1.09 in 1918. Of the assessments collected during 1920 only 1.55 per cent went toward expenses, while it is estimated that only about 50 per cent of the premiums of accident insurance companies goes toward actual payment of benefits. Assessments were collected from about 17,000 employers, with an estimated total payroll of \$436,127,338. The number of accidents reported in 1920 was 54,851 as compared with 44,260 in 1919.

Completed statistics for 1919 show that in Schedule I industries the total

time loss for the year's accidents, exclusive of loss of man power by death and permanent disability, amounted to 511,674 days, as compared with 573,653 days for 1918. The average time loss for temporary disability cases was 19.66 days as against 19.75 days in 1918. The average cost of all accidents in which compensation was paid was \$164, of which \$144 was for compensation and \$20 for medical aid. The average for 1918 was \$136, the increase being due largely to increased benefits. The average weekly wage increased from \$21.93 in 1918, to \$22.26 in 1919, and the average age of injured workmen decreased from 34.93 years in 1918 to 34.47 in 1919. Eighty-two per cent of the workmen injured in 1919 were British subjects, as compared with 76 per cent in 1918, those of foreign allegiance having decreased from 24 to 18 per cent. Fifty-seven per cent of the injured workmen were married, as compared with 59 per cent for the previous year, and a little over 3 per cent were females as compared with 5 per cent for the previous year.

Under the Ontario act the industries covered are divided into two classes, those included in Schedule I being under the collective liability system and those in Schedule II being on the individual liability basis. In the latter class the future pension payments will depend upon the continued existence and solvency of the individual employer, and many pensioners may thus lose their pensions. To remedy this the Board recommends that employers in Schedule II be required to pay in at once the full capitalized value of each pension award, past as well as future, and with these pensions form a pension fund out of which all pensions will be paid. This is the manner in which Schedule I industries take care of pensions. It is also felt by the Board that Schedule II employers should, like those in Schedule I, make good any current default of their insolvent members. As an alternative to these proposed changes the Board mentions the entire abolition of Schedule II, and the placing of all industries on the same footing.

The report contains the results of a survey of the condition of permanent disability pensioners under the Act, conducted by the statistician of the Board. Since the inception of the Act on January 1, 1915, to January 1, 1921, the Board made 1,974 pension awards, of which 1,781 were still continuing. The survey deals with 1,647 of these pensioners, information with regard to the remaining 134 being incomplete or lacking. At the time of reporting (from December 10, 1920, to May 10, 1921) 79 pensioners were unable to work, 18 were going to school, and 95 were in business for themselves. There were 980 employed and 475 unemployed. Of the unemployed, 113 have done no work since they were injured. The pensions awarded seem not only to have equalled or surpassed 55 per cent of the difference between the average amount of the earnings of the injured workman before the accident and the amount he was able to earn in some suitable employment after the accident, but to have taken care of the increase in wages generally.

Report of Manitoba Board

THE report of the Workmen's Compensation Board of Manitoba for 1920 shows that during that year there were 3,854 accidents reported as compared with 2,829 in 1919, an increase of about 36 per cent. This large increase was attributed to increased industrial activity. Of the 3,854 accidents reported 43 resulted in death as compared with 47 in 1919. There were 2,488 claims filed, 17 of which were for fatal accidents, 135 for permanent disability, and 2,336 for temporary disability; in 1919 there were 1,684 claims filed. Pensions were awarded in 33 cases of death, five of which were for limited periods; funeral expenses only were paid in 7 cases; in one case there was no award or expense, and in 2 cases no claims were entered.

The total advance premiums collected for accident insurance during 1920 amounted to \$721,571. This includes \$312,581 paid to insurance companies

and \$408,990 chargeable to self-insurance. These figures are based on estimated payrolls and are therefore incomplete. In 1919 the actual earned premiums amounted to \$753,962.

The Board's administration expenses for 1920 amounted to \$55,788, or 7.7 per cent of estimated premiums as compared with \$54,222, or 7.5 per cent of estimated premiums in 1919.

On January 1, 1921, an Act repealing the Workmen's Compensation Act, 1916, came into force. The new Act, which is similar to those which have already been adopted by a majority of the

other provinces, provides for the establishment of an accident fund by assessment on all classified employers in the place of insurance carried on by line companies.

At the request of the Dominion Government the Board administers the Dominion Compensation Act under which Dominion Government employees injured within the province are entitled to compensation for injury in cases where, if they had been in the service of a private employer, they would be so entitled, the Government paying its proportion of the cost of administration for such service.

THE BRITISH GOVERNMENT AND RECOMMENDATIONS OF INTERNATIONAL LABOUR ORGANIZATION

Action on the Washington and Genoa Conventions

ON July 5 of the present year, the British Government passed an order-in-council ratifying the four following draft conventions of the First International Labour Conference (League of Nations) held at Washington: "Concerning Unemployment", "Concerning Employment of Women during the Night", "Fixing the Minimum Age for Admission of Children to Industrial Employment", and "Concerning the Night Work of Young Persons employed in Industry. (See LABOUR GAZETTE, December, 1919, pp. 1440-53.) The ratification of these conventions was registered by the secretary-general of the League of Nations on July 14. Two of the draft conventions of the Washington conference were not ratified, that namely, limiting the hours of work to eight per day and forty-eight per week, and that concerning the employment of women before and after childbirth. The recommendations of this conference were also accepted with the exception of two clauses in the recommendation concerning unemployment. The Government

have since informed the secretary-general of the League of Nations of their reasons for withholding their ratification in these cases.

With regard to the draft convention regulating hours of work it was stated that two principles were contained in it, first, that working hours shall not exceed eight per day and 48 per week, with certain exceptions, and secondly, that overtime hours in excess of the daily or weekly maximum are prohibited with permanent exceptions in the case of preparatory or complementary work and temporary exceptions in cases of pressure of work. It was pointed out that from 10 to 12 millions of workpeople in the United Kingdom were covered by agreements fixing a normal working week of 48 hours or less, and had thus obtained a considerable measure of the protection which the draft convention was designed to secure. The majority of agreements limiting hours of employment make provision for overtime at a higher rate of pay, the extent of overtime being determined by the individual

needs of separate establishments. In the opinion of the government a more rigid method of limiting overtime whether by legislation or statutory orders would not prove so satisfactory as this elastic system of industrial agreement. This convention is designed to apply to the "transport of passengers and goods by rail," but in the opinion of the government two important agreements at present in force in the railway service which provide for an 8-hour day and a 48-hour week, exclusive of daily overtime and Sunday duty, were not consistent with the draft convention, and the Government did not see their way to take steps to abrogate these agreements. For these reasons, the Government did not ratify this convention, but instead suggested to the Governing Body of the International Labour Organization that it might consider the advisability of placing the whole question of working hours on the agenda of a future general conference for re-consideration, in order to draw up a convention sufficiently elastic to meet with general acceptance.

With regard to the draft convention concerning the employment of women before and after childbirth, it was pointed out that under the plan the women entitled to benefits were practically the same as those within the scope of the British National Health Insurance scheme, except that the convention would exclude about 30,000 domestic servants and agricultural labourers who are included in the National Health Insurance scheme, and would include about 15,000 women, such as teachers and non-manual workers, earning over £250 per annum, who are exempted from the insurance scheme. It was claimed that the National Health Insurance Acts of Great Britain provided maternity benefits in excess of those of any other country except Australia and New Zealand. The Factory and Workshop Act, 1901, provides that an occupier of a factory or workshop shall not knowingly allow a woman or girl to be employed therein within four months after giving birth to a child.

Under the Maternity and Child Welfare Act, 1918, the government encourages and aids financially schemes of local authorities and voluntary agencies for protecting the health of expectant and nursing mothers and children under five years of age. Great Britain has thus already in force a policy aiming at the same results as the convention and it was believed that the adoption of the specific proposals made in the convention would lead to serious administrative difficulties, and the benefits now provided were in some respects in advance of those proposed in the convention.

With regard to the recommendation concerning Unemployment, the Government stated that they were not prepared to adhere to the clause proposing the prohibition of fee-charging employment agencies, and the operation of existing ones under government licenses. It was considered that the clause proposing to permit the recruiting of workers in one country for employment in another only by mutual agreement between the countries concerned and after consultation between employers and workmen affected would place difficulties in the way of the legitimate interchange of workers. It was accordingly decided not to adhere to the clause. The proposal to establish an effective system of unemployment insurance was fully covered by the Unemployment Insurance Acts, 1911-1921, and this clause was therefore accepted. The principle that execution of all work undertaken under public authority should be co-ordinated with a view to reserving it as far as practicable so as to relieve unemployment was accepted, although the matter was recognized as complicated and difficult.

Genoa Conventions

On November 8, a resolution was passed in the House of Commons approving the policy of the Government respecting the draft conventions and recommendations of the Second International Labour Conference at Genoa. (See LABOUR GAZETTE, October, 1920, pp. 1323-30.) All of these conventions

and recommendations dealt with the employment of sailors.

The government announced that it accepted the first convention fixing the minimum age of children employed at sea at 14 years. In regard to the second convention, that the contract wages should be paid for two months to sailors unemployed on account of the loss or the foundering of their ship, the government proposed to amend the Merchant Shipping Act, so as to bring it into line with the convention. The ratification of the third convention providing for the establishment of employment facilities for seamen was postponed until the government had experience of the working of the voluntary system of ship-owners and sailors in the industry. The

first of the recommendations proposing the limitation of hours in the fishing industry was rejected by the government. The second recommendation concerned the limitation of hours of work of inland navigation, and it was proposed to postpone consideration of the question until the return of more settled conditions. The third recommendation dealt with the establishment of national seamen's codes and the government proposed to accept it, but intended to defer the necessary legislative action until the pressure of other parliamentary work decreased. The fourth recommendation concerned the establishment of schemes of employment insurance for seamen. That had already come under the Unemployment Insurance Act, and they proposed to accept it.

ACTION OF GOVERNMENT IN INDIA ON LABOUR PROBLEMS

CONSIDERABLE progress has recently been made in India in the direction of advanced labour legislation. A labour office was instituted by the Government of Bombay last April and it has since been engaged in an investigation of economic conditions in Bombay and in the preparation of labour statistics. The first issue of the *Labour Gazette* published monthly by the secretariat of this office appeared in September last. It contains a cost of living index, statistics of industrial disputes in the presidency for the months of April, May, June, July and August, an account of trade unionism in Bombay, and various other matters of industrial interest.

Trade Unionism is stated in the *Labour Gazette* to be a modern movement in Bombay. The attitude of the Government toward trade unions was shown in

a statement by His Excellency Sir George Lloyd, Governor of Bombay, to a deputation of the All-India Trade Union Congress, in which he expressed the opinion that the organization of labour on sound economic lines was an unquestionable advantage to labour, to the community and to government and promising his support to the movement. The Government of India has accepted a resolution of the Imperial Legislative Assembly recommending that the Governor General in Council should take steps to introduce as soon as practicable in the Indian legislature such legislation as may be necessary for the registration of trade unions. The Government of India has since addressed local governments on this matter.

The Bombay legislative council passed a resolution on July 30 recommending the Governor in Council to appoint a

committee to consider and report upon the practicability or otherwise of creating suitable machinery for the prevention and early settlement of labour disputes.

An account of the steps proposed for putting into operation the draft conventions and recommendations of the International Labour Conference at Washington is given in the *Labour Gazette*. These steps include the introduction in the Legislative Assembly of India of a bill to amend the Indian Factories Act, 1911. In the latter bill there are included all factories using mechanical power employing 20 persons or more, and authority is given local governments to extend the Act to factories employing 10 persons and to those where no mechanical power is used. The working hours for adults are fixed at 60 per week and not more than 12 in one day. The hours for children are fixed at 6 per day. After six hours of work in the case of adults rest of one hour must be given, and a rest of half an hour must be given to each child working more than five hours, in such a way that no child shall work more than four hours steadily. The minimum age of children for the purposes of the Act is raised from 9 to 12 years and the maximum from 14 to 15 years. The proposed Act does not embody the draft conventions relating to maternity and maternity benefits.

It is also stated that a bill to amend the Indian Mines Act, 1901, is to be introduced in the Legislative Assembly, which will include amendments necessary as a result of the Washington Labour Conference.

The Government of India has requested the views of the Government of Bombay on the question of Workmen's Compensation and has expressed the opinion that the time had arrived for legislation on this subject. The Government stated that it considered it desirable that compensation for injury

throughout India should be carried out on uniform lines.

Last April a committee on Industrial Unrest was appointed by the Government of Bengal. After a study of the causes of the numerous strikes that had occurred in Bengal during the nine months ended March 31 last, the committee recommended that where strikes occurred in public utility services a conciliation board, formed from an already constituted panel, should be set to work to bring about a settlement. The board would have no power to enforce its findings but would rely on public opinion to induce the parties to accept the terms. In regard to private strikes, the committee suggested that where the parties in dispute expressed a wish for impartial outside intervention, the Government should endeavour to meet their wishes. The establishment of joint works committees to promote harmonious relations was also suggested by the committee. In accordance with these recommendations, the Government of Bengal immediately took steps to form a panel, and from this panel a conciliation board was constituted to deal with strikes on certain light railways. The efforts of the board were successful in settling the dispute, and both sides were brought into general agreement as to the lines on which a joint works committee might be established to deal with future difficulties. In view of this success, the government decided to put the system of conciliation boards for public utility services on a permanent basis, and appointed thirty members to the first conciliation panel. The panel will be reconstituted annually and will deal only with disputes affecting public utility services in Calcutta and its neighbourhood. It was announced that in the case of any private dispute, if both parties should desire it, the Governor in Council would be prepared to establish a special conciliation board to deal with the matter or to take such other action as might be suitable.

UNIVERSITY TRAINING FOR WELFARE WORK IN GREAT BRITAIN

A REPORT on University Training for Welfare Work in Industry and Commerce* has recently been issued by the Joint University Council for Social Studies. This is the fourth report on the same subject issued by the Council, the object of the reports being the co-ordination and development of the work of Social Study departments in connection with the universities of Great Britain and Ireland. The report was prepared by a committee consisting of members of the Council, supplemented by representatives of the Home Office (Factory Department), and the Ministry of Labour, of employers and workpeople, of the Welfare Workers' Institute, and the Industrial Welfare Society.

Welfare work is defined as "the provision by the management for the workers of the best conditions of employment, including everything which bears on the health, safety and general well-being and efficiency of the worker, while avoiding any interference with his private affairs."

The material basis of these conditions is largely provided by the Factory Acts; but "it is the function of the welfare worker to promote in the factory an atmosphere of fellowship, goodwill, mutual regard and co-operation, in which the material comforts so secured may be utilized to the best advantage." These duties give the welfare worker a recognized place in the factory and establish a point of contact between him (or her) and the management, on the one hand, and the workers, on the other. The principal recommendations of the Council may be summarized as follows:—

Training for welfare workers should be provided by the universities, as it is to the universities that employers and others will look for the provision of the intellectual training necessary to equip men and women for such posts. No fixed standard of qualification for training can be laid down, but candidates should have had such previous education as to enable them to profit by the Social Study course.

No definite age can be fixed for starting on a course of training, but "a certain degree of maturity of thought and experience is essential."

The length of training required differs according to the student's qualifications, but two years is, as a rule, the shortest period necessary to cover both the academic training and the supervised practical work. The syllabus should include industrial and social history, economics, social and political philosophy, health and hygiene, psychology, outlines of central and local government, elementary statistics, industrial law, business organization, industrial structure and problems. In their practical work students should have lectures and personal tuition from persons who have had welfare experience.

"All students should have opportunities of practical experience, which will give them insight into the working of the public and social agencies of a modern community, and opportunities of association with normal conditions of working-class life." Residence in a settlement in a working-class neighbourhood is suggested as a possible means of getting this experience.

As the scientific study of the problems of industrial welfare is still in its infancy, facilities for advanced study in industrial organizations, psychology,

*To be obtained from P. S. King & Son, Ltd., Orchard House, 2 and 4, Great Smith Street, London, S.W.1. Price 6d.

statistics, etc., should be provided at convenient hours and at a moderate fee.

Bursaries should be provided to enable candidates without means to qualify for welfare work.

A memorandum prepared by a joint committee of the Woolwich Trades and

Labour Council and the Woolwich Labour Party in 1918, and setting forth what they regard as the conditions "essential to any scheme of welfare supervision that is to win the full confidence and support of the workers" is printed as an Appendix to the Report.

CONSTITUTION OF THE NATIONAL BUILDING GUILD IN GREAT BRITAIN

ARTICLES describing in general terms the purpose and activities of the National Building Guild in Great Britain have appeared from time to time in the *LABOUR GAZETTE*. The Constitution of the National Building Guild has now come to hand, the full text of which is as follows:—

CONSTITUTION OF GUILD COMMITTEES.

1. The guild Committee shall be composed of one or two—but not more than two—representatives from each Trade Union connected with the Building Industry. Should a Guild Committee consider it advisable, it may, subject to the approval of the Regional Council, accept representation from Trade Union Branches. To these may be added one elected representative from any approved group of Building Trade workers, whether administrative, technical, or operative.

2. Each organization shall elect its representatives by whatever machinery it deems best.

3. The Guild Committee, when constituted, shall proceed to the election of a chairman and secretary, who may or may not be a member of the Committee, but must be members of their Trade Union.

4. The district covered by each Committee shall be mutually arranged but, in general, regard shall be paid to the districts recognized by Trade Union organization. It is important that overlapping should, as far as possible, be avoided.

5. Each representative upon the Committee shall be responsible in co-operation with the secretary, for the supply, conditions of em-

ployment, and discipline of the employees in his Trade Union. If any point touching Trade Union rules and regulations be raised, the local Managing Committee of the Trade Union concerned shall be consulted. The decision of a joint session of the local Managing Committee and the Guild Committee shall be final.

6. The Guild Labour Register shall be kept by the secretary and shall be treated as confidential.

7. All moneys received shall be paid into the credit of the Guild Committee.

8. All cheques must be signed by any two members of the Finance Committee, and countersigned by the secretary, who shall, for this purpose, be the executive officer of the Finance Committee.

9. Any balance at the bank shall be under the control of the Guild Committee, but all plant and other assets shall, by deed of trust, be vested in trustees to be appointed by the National Board.

10. A firm of chartered or incorporated accountants shall be appointed to arrange and supervise the accounts. Their recommendation shall be binding upon the secretary, subject to appeal to the Guild Committee. Should this appeal not be satisfactory to either party, the Guild Committee or secretary may appeal to the National Board. The National Board may at any time order an audit of the accounts of any Guild Committee and take necessary action thereon.

11. The Guild Committee shall be responsible for faithfully carrying out all contracts, signed on its behalf. To that end it must, by its own methods, choose its general and departmental foremen, and apply to the best advantage the funds under its control. It must agree in co-operation both in policy and detail, with the Na-

tional Board, which is legally responsible for contracts and the fund for continuous pay. Representations made by the National Board through its properly accredited officers must be acted upon subject, however, to appeal or arbitration.

12. The Guild Committee shall control its own bank account. The National Board shall pay into the credit of each Committee such sums as it received from Local Authorities or other employers. The Guild Committee shall, upon receipt of such moneys, remit its dues to the National Board.

13. The National Board shall have full powers to control credit, finance, insurance and policy; but the Guild Committee may purchase its own material, in which event it shall upon request forward duplicate copies of all orders to the National Board or the Regional Council. If the National Board or Regional Council purchase any plant for any contract, the amount required for such transaction shall be remitted by the Guild Committee out of the overdraft obtained for that purpose.

14. Guild Committees shall, in co-operation with the Regional Councils, enter into business relations with other Guild Committees in their own localities, and so effect economy in the purchase and transport of materials.

15. It shall be the duty of the Guild Committees to organize social functions, encourage good fellowship, and spread Guild ideas by propaganda and example.

16. It is expressly agreed that no action, rules or regulations by the Guild Committees shall be valid if such action, rules or regulations shall preclude or hinder the development of the National Building Guild.

REGIONAL COUNCILS.

17. Regional Councils shall be constituted with not less than ten Guild Committees. Re-

presentatives upon the Regional Councils shall be appointed, one from each Guild Committee. If in any Region the Guild Committees have been organized into Area Committees, the Regional Councils shall be appointed by the Area Committees, subject to the consent of a conference of all Guild Committees in the Region. Regional Councils shall have power to enter into and carry out contracts, subject to the consent of the Area Committee or Guild Committee concerned, and to the assent of the National Board, as to finance and credit. The Regional Council may co-opt additional members to a number not exceeding one-quarter of its total membership, but each co-option shall be for the purpose of securing equitable craft, administrative or technical representation.

CONSTITUTION OF NATIONAL BOARD.

18. A National Board shall be formed which shall be the governing body of the National Building Guild.

The National Board shall be formed of one representative from each Regional Council, to be nominated either by the Regional Council or the Guild Committees.

The voting for national representatives shall be by each Guild Committee.

The term of office of each member shall be three years, subject to recall by a decision of the Regional Council and Guild Committees. A decision recalling a national representative must be by a two-thirds majority.

The National Board may co-opt additional members, not exceeding one-third of its total membership, but such co-option shall be for the purpose of securing equitable craft, administrative or technical representation.

The National Board shall provide for and administer a common fund to guarantee continuous pay to all guildsmen wherever employed.

COAL MINE FATALITIES IN THE UNITED STATES IN 1920

A BULLETIN of the United States Bureau of Mines (Technical Paper 288) shows a reduction of 2.46 per cent in the number of coal mine fatalities in the United States during 1920 as compared with 1919, notwithstanding an increase in the number of employees and in the amount of coal mined. Accidental

deaths in and about the coal mines during the year numbered 2,260, while in 1919 there were 2,317. The number of employees was estimated at about 775,000 in 1920 and 765,000 in 1919. The output of coal for 1920 showed an increase of 18 per cent over the production of the previous year, the total production

amounting to 645,663,000 tons (of which 556,563,000 tons was bituminous and 89,100,000 tons anthracite), while in 1919 the production totalled 546,155,000 tons (including 458,063,000 tons of bituminous and 88,092,000 tons of anthracite). The quantity of coal produced for each life lost during the year was approximately 285,700 tons as compared with 235,700 tons in 1919; for every million tons of coal mined in 1920 there were 3.50 lives lost, and in 1919 there were 4.24 lives lost. There were fewer lives lost in 1920 in proportion to the output of coal than in any previous year. The following table shows the causes of the fatalities that occurred during 1920 and 1919:

Cause.	Number killed	
	1920	1919
Underground:		
Falls o' roof' or 'ace.....	1,127	1,100
Mine cars and locomotives	405	381
Gas and dust explosions.....	164	191
Explosives	127	206
Electricity	76	69
Mine fires.....	8	22
Miscellaneous.....	104	108
Total underground.....	2,011	2,077
Shaft: Total shaft.....	56	53
Surface:		
Haulage.....	78	93
Machinery.....	28	28
Miscellaneous.....	87	66
Totals surface.....	193	187
Grand total.....	2,260	2,317

AN ANALYSIS OF BRITISH TRADE UNIONISM

(Reprinted from "Bloomfield's Labour Digest," November 26, 1921.)

THE accompanying table, which has been prepared by the London correspondent of *Bloomfield's Labour Digest*, shows (a) the number of unions in each type of industry, (b) the class of worker organized in each, and (c) the total number affiliated to the Trades Union Congress Parliamentary Committee, which is the central and co-ordinating body for the organized trade union movement of Great Britain.

The Parliamentary Committee was formed in the year 1868. At its first congress, held fifty-three years ago, 34 delegates attended, representing 118,367 members; at its last 955 delegates were present representing 6½ million workers.

The Trades Union Congress came into being for the following objects:

- (1) To watch all legislation affecting labour.
- (2) To initiate such legislation as Congress may direct.
- (3) To arrange programme for Congress from resolutions.

(4) To verify all delegates' credentials.

(5) To arrange for the meeting of Congress.

(6) To ballot for position and order of the resolution.

(7) To transact the business between each Congress.

The ideas of the original founders of the Parliamentary Committee did not go very far. Much of their work, as can be seen above, was nothing more than the oiling of the machine which ensured the smooth running of the annual meeting of delegates from the affiliated unions. For the rest they did what they could to carry out the resolution passed by Congress by trying to interest members of Parliament in them and generally lobbied the House of Commons assiduously in the endeavour to affect legislation that came before it dealing with labour and factory conditions.

It never occurred to the early pioneers, as a serious proposition, that labour should itself form a party of its own in-

dependent of all other political combinations. This came later, but gradually, and not without a struggle. For years after the Labour Party came into being (twenty-one years ago) there were still many trade unionists who clung to the older demarcation of parties. Some of this feeling must be attributable to the power of the late W. E. Gladstone, the veteran leader of the Liberal Party. His hold upon thousands of Radical workingmen was tremendous, yet today, although the basis of the Trades Union Congress

Parliamentary Committee remains the same, the change is complete. All the large trade unions are now definitely affiliated to both the Congress and the Labour Party and the executives of both work in the closest co-operation. With the advent of the Labour Party in the political arena some of the purposes for which the Congress was formed became obsolete and there are not lacking signs that in the near future the identity of interests between the two wings will lead to an even closer working partnership.

Type of Trade Union.	Occupation Covered.	Number of Unions	Total membership
Building Trades.....	Builders' Labourers—Bricklayers, Carpenters, Cabinet-makers, French Polishers, Masons, Painters, Decorators, Plumbers, Domestic Engineers' Slaters, Street Pavers.....	13	355,962
Clothing Trades.....	Boot and Shoe Operatives—Cloggers, Felt Hatters, Hosiery Workers, Knitters, Tailors, Garment Workers.....	14	284,654
Cotton Operatives.....	Card and Blowing Room Operatives—Packers, Spinners, Tape Sizers, etc.....	22	101,537
Dock Labourers, Sailors and Firemen, etc.	Coal Trimmers, Coal Workers, Colliery Enginemmen, Colliery Under-managers, Dock Labourers, Riverside and General Workers, Sailors and Firemen, Ships' Stewards, Cooks, Butchers and Bakers.....	17	342,994
Engineering and Shipbuilding.....	Barge Builders, Blacksmiths and Ironworkers, Boilermakers and Iron and Steel Shipbuilders, Engineers, Instrument Makers, Wheelwrights.....	16	627,585
General Labourers.....	Agricultural Workers, General Workers, Gas Workers, Municipal Employees, Warehouse Workers, etc.....	12	1,485,815
Metal Workers..... FAIR WAGE CONTRACTS, NOVEMBER, 1921

DURING November the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to fifteen fair wage contracts, of which fourteen were awarded by the Department of Public Works, and one by the Department of Railways and Canals. All the contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulations for the suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Extension to western wharf, Notre Dame des Sept Douleurs, Que. Name of contractor, N. Letourneau and J. A. Fortier, Montmagny, Que. Date of contract, November 26, 1921. Amount of contract, schedule of prices.

Repairs to wharf, Providence Bay, Ont. Name of contractor, McNamara Bros. and Thornton, Sault Ste. Marie, Ont. Date of contract, November 16, 1921. Amount of contract, schedule of prices.

Repairs to wharf, Port Hood, N. S. Name of contractor, Thos. D. Morrison, D'Escoisse, N. S. Date of contract, October 31, 1921. Amount of contract, schedule of prices.

Pier Head at Public Wharf, Black's Harbour, N.B. Name of contractor, F. L. Boone and G. S. Macdonald, South Devon and St. John, N.B. Date of con-

tract, October 31, 1921. Amount of contract, schedule of prices.

Repairs to Guide Pier, Belœil, Que. Name of contractor, Costo Brothers, Montreal, Que. Date of contract, October 27, 1921. Amount of contract, schedule of prices.

Repairs to Wharf, Tofino, Comox-Alberni District, B. C. Name of contractor, Wm. Lowell Thompson, Uclulet, B.C. Date of contract, October 28, 1921. Amount of contract, schedule of prices.

Construction of Western Pier, Whitby, Ont. Name of contractor, V. T. Bartram, Toronto, Ont. Date of contract, November 4, 1921. Amount of contract, \$2,206, and schedule of prices.

Extension to shore end of western wharf, Grosse Ile Quarantine Station, Que. Name of contractor, Jos. Gosselin, Ltd., Quebec, Que. Date of contract, November 17, 1921. Amount of contract, concrete, \$20 per cu. yd., and flooring, \$5.75 per sq. yd.

Reconstruction of Eastern Breakwater, Collingwood, Ont. Name of contractor, Wm. Birmingham, Kingston, Ont. Date of contract, November 16, 1921. Amount of contract, \$7,500, and schedule of prices.

Supply and installation of fittings in Post Office, Red Deer, Alta. Name of contractor, Baird & Stevenson, Ltd., Calgary, Alta. Date of contract, November 8, 1921. Amount of contract, \$2,775.

Grading, paving roads, etc., at Riding School, R.M.C., Kingston, Ont. Name of contractor, Richard J. McClelland, Kingston, Ont. Date of contract, November 17, 1921. Amount of contract, \$2,250.

Alterations to Post Office fittings, Ottawa, Ont. Name of contractor, Art.

Bourque, Hull, Que. Date of contract, November 3, 1921. Amount of contract, \$3,900.

Dredging in deep water berths, St. John, N.B. Name of contractor, J. A. Gregory, St. John, N.B. Date of contract, November 18, 1921. Amount of contract, Class "B" p. c. yd. 40c. (scow meas.).

Grading, Paving, Gutters, Drains, etc., at Drill Hall, Amherst, N.S. Name of contractor, Nick and Mike Daskallino, Halifax, N.S. Date of contract, November 24, 1921. Amount of contract, \$6,695.

DEPARTMENT OF RAILWAYS AND CANALS.

Construction, erection and completion ready for occupation of a Station Building with raised machinery platform, at Barraute, Que. Name of contractor, J. A. Boulay. Date of contract, Novem-

ber 9, 1921. Amount of contract, \$6,390.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in November for supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages and the performance of work under sanitary conditions:

Nature of Order	Amount of Order.
Making metal dating stamps and type and other hand stamps and brass crown seals.....	\$ 1,719 68
Making and repairing rubber stamps, daters, etc....	413 69
Supplying mail bag fittings	9,173 98
Making up and supplying letter carriers' uniforms, etc.	11,010 25
Repairing letter boxes, etc.	33 90
Making and supplying stamping ink, pads, etc.....	426 49
Satchels.....	837 30
Scales repaired.....	433 50

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Similar agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned and in effect though not signed. In the case of each agreement the rates of wages for principal classes of labour are given, with other information of general interest.

Manufacturing—Foods

FORT WILLIAM, ONT.—CERTAIN MASTER BAKERS, AND JOURNEYMEN BAKERS' UNION OF FORT WILLIAM AND PORT AR-

THUR. Agreement to be in effect from May 1, 1921, to May 1, 1922.

Recognition of Union.

Hours per day, 9; per week, 54. Holiday week, time and one-half after 47 hours.

Wages: Per week—foremen, \$33; 2nd men, \$30; 3rd men, \$27; helpers, \$23. Sundays, doughing to be paid \$1 extra.

All family bread to be supplied.

A week's notice to be given by masters or men.

"If cost of living comes down to any great extent, a conference between employers and employees to be arranged."

Manufacturing—Iron

SASKATOON, SASK.—THREE LOCAL FIRMS, AND SHEET METAL WORKERS' INTERNATIONAL ALLIANCE, No. 758. Agreement to be effective from August, 1921, to May 1, 1922.

Hours, per day: nine in summer; eight in winter. On Saturdays, before

noon, five in summer, four in winter, with afternoon work optional to men and employers of the different shops.

Minimum wage: Per hour—82½ cents.

Overtime, until midnight, time and one half; thereafter and all Saturday overtime, Sundays and holidays, double time.

Men working out of town to have their expenses paid. Travelling time to be paid straight time.

Only union men, or those eligible and willing to join union, to be employed.

Grievances to be referred to a committee of three from each party; committee to meet within 48 hours and have full power to settle dispute. Failing a settlement, a seventh member to be chosen, agreed upon by both sides.

Manufacturing Iron

VICTORIA, B.C.—CERTAIN SHEET METAL CONTRACTORS, AND AMALGAMATED SHEET METAL WORKERS' INTERNATIONAL ALLIANCE, No. 434. Agreement to be in effect from November 1, 1921, to April 30, 1922.

Employers to employ under following conditions members of the above union or sheet metal workers willing to become members. Failing supply of workers from the union, other help may be employed temporarily until such is provided by the union.

Wages: Per hour—journeymen, 80 cents; junior members, 60 cents.

Pulp, Paper, Printing

IROQUOIS FALLS, ONT.—ABITIBI POWER AND PAPER COMPANY, AND INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS. Agreement extended on finding of Arbitration Board to May 11, 1922, with new schedule effective from October 13, 1921.

Text of agreement was published in the LABOUR GAZETTE for December, 1920, page 1646.

The new rates follow:

Pulp and Sulphite Works: Wages: Per hour—Wood room—foreman, 76

cents; drum operators, assistant foreman and knife changer, 56 cents; sawyers, oilers, 48 cents; knife grinder, 46 cents; eveners, 40 cents; wood handlers and conveyors, 41 cents; stackers, chippers, splitters, barkers, 45 cents; chiptank, chipscreen, 42 cents; all cleaners, 41 cents.

Grinder Room—Foreman, 76 cents; assistant foremen and jiggerman, 58 cents; crankman, floorman, oilers, wood-pickers, grinderman, 48 cents.

Sulphite Mill—cooks, 83 cents, acid-makers, 77 cents; stock runners, 65 cents; cooks' 1st helpers, 59 cents; riffler men, 54 cents; cooks' 2nd helpers, burnermen, 48 cents; lime rock handlers, blow pits, screenmen, sulphur wheeler, duckers, 45 cents; oiler and cleaner, 45 cents.

Wet Room—foreman, 76 cents; refinerman, oilers, 48 cents; screenman, wet machines, truckers, pressmen, loaders, 45 cents.

Mixing Room—mixers, broke beaters, broke hustlers, swipers, 45 cents.

Electrical—operators, 73 cents; motor-man, 65 cents; wheelman, 54 cents.

Finishing Room—foreman, head core-maker, 65 cents; finishers, weighers, coremakers, 48 cents; markers, 46 cents; car liners, truckers, wrapper cutters, loaders, cleaners in paper mills, 45 cents; electric trucker, 62 cents.

Steam Plant—head fireman, 76 cents; engineers, 2 and 3, 72 cents; engineers, 1 and 4, 65 cents; coal crusher, 64 cents; fireman, 59 cents; pumpmen, oilers, 57 cents; fire cleaners, coal trimmers, bunkermen, 48 cents; refuse conveyors, sweepers, 45 cents.

Sanitary department and miscellaneous—fire inspector, 76 cents; storemen, 59 cents; bull gang, 48 cents; loading crew, 46 cents; cleaners and swipers, store labour, sanitary crew, 45 cents.

Yard—locomotive engineer, crane engineer, conductor, 76 cents, yard foreman, 70 cents; locomotive fireman, locomotive brakeman, 64 cents; teamsters,

47 cents; labourers, team helpers 40 cents.

Electrical (new mill)—operators, 63 and 75 cents; No. 5 machine daymen, 70 cents; No. 5 machine shift men, 63 cents; motormen, 59 cents.

All mechanics and mechanics' helpers now in employ of the company to receive 10 per cent reduction on rates now being paid. Minimum rates for mechanics, per hour, 65 cents; helpers, 54 cents.

Saw mill rates to be adjusted by company and local union.

HAMILTON, ONT. — THREE DAILY NEWSPAPERS AND STEREOTYPERS' AND ELECTROTYPERS' UNION No. 113. Agreement effective from September 1, 1918, to August 31, 1922.

Union at all times to supply competent and skilled help upon demand of the employers.

Hours per day, eight; six days per week. Hours per night, seven and one half.

One apprentice to each office employing two men.

Wages: Per week—Stereotypers, from September 1, 1918, to August 31, 1920, \$25; from September 1, 1920, to August 31, 1922, \$26. Subsequently a war bonus of \$10 per week was added, and the scale is now \$36.

Foreman to receive same rate of increase as journeymen.

VERNON, B. C. In the LABOUR GAZETTE for October, 1921, the agreement of Typographical Union No. 541 was stated as being between "Employing Printers and Vernon Typographical Union No. 541." This should be amended to read "Certain Employing Printers in the Okanagan Valley," as it was not intended to imply that all such employers had accepted the agreement.

Transportation—Water

MONTREAL, QUE. — HARBOUR COMMISSIONERS OF MONTREAL AND THE HARBOUR UNION OF MONTREAL. Agreement to be effective from May 1, 1921, to May 1, 1922, for employees of the grain elevator system, machine shop and ship yard and harbour yard shops. For other employees, until the close of navigation in 1921.

Wages: Per hour—between 7 a.m. and 6 p.m. are as follows:

Construction Work:—crane engineers, carpenters, car repairers, construction locomotive engineers, concrete mix engineers, machinists—cranes, blacksmith, cement finishers, 60 cents; firemen, 42 cents; handymen, 40 cents; painters, 44 cents; diver, 65 cents; diver's helper, 45 cent; trackmen, 41 cents; crib workers and patchers, 50 cents; labourers, 35 cents; roofers, iron workers, 50 cents; pile driver engineer, air compressor engineer, 52 cents; sub-foreman, 45 cents. blacksmith's helper, concrete men, track paver, 40 cents; regular pavers, 55 cents; concrete mix handlers, 40 cents; small concrete mixer, 57 cents; bricklayers, 90 cents. Day wages: watchmen, \$3.25; watchmen when firing, \$3.75; carters, \$4.50; teamsters, \$7.

Grain Elevator System: Chief weighman, millwright, 62 cents; weighmen, 56 cents; feed tenders, 51 cents; assistant millwright, 56 cents; machinery men, 50 cents; marine leg men, 51 cents; assistant machinist, bin sweeper, oiler, 45 cents; distributors, 56 cents; auto scalemen, \$145 per month; machinist, 60 cents; assistant machinist, 55 cents; trippermen, 56 cents; firemen, oilers, 45 cents. Shovellers and baggers: foreman shoveller, 62 cents; foreman bagger, 56 cents; shovellers, 50 cents; sewers and scalemen, baggers, 45 cents. Conveyor system: assistant foreman, rope splicer, 56 cents; millwright, 62 cents; feed tenders, 51 cents; conveyormen 45 cents; main towermen, 51 cents.

Harbour Yard:—machinists, 60 cents; handymen, 40 cents; plumber, 65 cents;

assistant plumber, 47 cents; blacksmith, 60 cents; blacksmith's helper, 40 cents; carpenters, 60 cents; painters, 45 cents; labourers, 35 cents.

Shipyard: carpenters, 50 cents; winchmen, handymen, 40 cents.

Dredging Fleet:—Dredges: engineers, 70 cents and 52 cents; cranemen, 57 cents; firemen, 42 cents; deckhands, 37 cents. Derricks: engineers, 60 cents and 50 cents; firemen, 42 cents; deckhands, 37 cents. Tugs: wages per month—captains, \$105; engineers, \$115; firemen, \$55; deckhands, \$45; cooks, \$30 and \$18. Coal barge: captains, \$110 per month; handymen, 40 cents per hour. Floating crane: captain, \$150 per month; engineer, \$125 per month; firemen, handyman, oiler, 40 cents per hour.

Electrical Department: Per hour—hoist men, 45 cents; wireman, 40 cents; labourer, 35 cents; lineman, 50 cents; groundsman, 35 cents.

Roundhouse: Per hour—fitters, 65 cents; boilermakers, carpenter, machinist, 60 cents; ashpan man, 50 cents; helpers, 40 cents; apprentice helpers, 35 cents; painter, 45 cents.

In case of one shift, all labour over 10 hours per day to be paid for at rate of time and one-half, this rate applying also to Sundays and holidays.

Day and night watchmen paid by the shift not to be entitled to overtime for Sundays and holidays.

Construction

HAMILTON, ONT. — THREE LOCAL FIRMS, AND I. A. OF BRIDGE, STRUCTURAL AND ORNAMENTAL IRON WORKERS, No. 186. Agreement to be effective from May 1, 1921, to April 30, 1922.

No limitation to be placed as to amount of work a man shall perform during his working day.

Foreman to be selected by agent of the employer.

One apprentice to every seven men.

Workmen to be at liberty to work for whom they see fit. Employers to be at liberty to discharge whom they see fit.

Hours of labour, nine per day, five on Saturdays.

Double time for overtime, for Saturday afternoon and for holidays. No work on Labour Day except in case of dire necessity.

Minimum wage: per hour—80 cents. Apprentices, two-thirds of journeyman's wage, and straight time. Road scale, 85 cents per hour.

Employees to be protected by City, Provincial and Dominion Laws and not to be required to work until such protection is furnished.

Men going outside city to work to be paid travelling expenses and straight time for travelling time.

Members of local employed as foremen to receive not less than 20 per cent above journeymen's scale.

HAMILTON, ONT. — ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, HAMILTON BRANCH, MASON AND GENERAL CONTRACTORS' SECTION, AND BRICKLAYERS AND MASONS' UNION No. 1. Agreement to be effective from November 1, 1921, to April 1, 1923.

Employees recognize employers as the only authoritative body in the district representing employers of masons, for

the purpose of making this or any agreement affecting the trade, or any changes to be made in same from time to time. No other agreement to be made in this district and no different rates or conditions to be permitted.

Wages until April 1, 1922, to be 90 cents per hour.

Hours per week, 44; per day, 8; 4 on Saturdays—except where train or car schedules interfere. Emergency work, time and one-half.

When working two or more shifts, no employee to work more than eight hours in the twenty-four. On three shifts, eight hours to be paid for seven hours' work.

Members of the first part to give employment only to members of the union which shall be composed only of journeymen..

No cessation of work pending disputes.

Where disputes arise, the Joint Arbitration Board of the local bodies to take up the matter and endeavour to adjust same. Board to consist of three men appointed by each of the parties. Where no settlement is arrived at, appeal to be made to the International Union and if still unsuccessful, to an independent umpire, decision to be binding.

Business agent to report first to the Superintendent on the works before interview or talking to the men.

Work from noon Saturdays to 8 a.m. on Mondays, also holidays, to be paid double time.

In firms of more than two members, no more than one member to work with the tools.

During January, 1922, negotiations to take place as to rate to be paid after April, 1922. If no settlement is reached, Arbitration Board to be appealed to; failing settlement, an umpire to be appointed to give decision.

OTTAWA, ONT.—THREE CUT STONE CONTRACTORS, AND CUT STONE CUTTERS' ASSOCIATION. Agreement to be in effect

from November 21, 1921, to April 30, 1922.

Agreement for the purpose of preventing strikes and lockouts and facilitating a peaceful adjustment of all grievances and disputes which may arise.

Only union members to be employed for pneumatic and hand cutting. Union to furnish required number of skilled men at all times. Failing this, employers may employ stone cutters as they see fit, and same shall make application at once to join the union, being permitted to do so.

Wages: Per hour—journeymen, 90 cents.

Hours of labour—eight per day; four on Saturdays. Overtime to be allowed only in cases of absolute necessity. Rate first two hours, time and one-half; thereafter, double time.

New Year's Day, Good Friday, Dominion Day, Labour Day and Christmas Day to be observed, other holidays optional.

Parties to this agreement to arbitrate all differences and grievances arising during the life of this agreement without any strike or lockout. Each party to elect an arbitration committee of three. Upon failure of these to agree upon a question, they shall select an umpire (not affiliated with the trade) whose decision shall be final and binding.

Foreman to be selected by and be the agent of the employer. This clause not to affect foreman working with the tools.

Employer may have one apprentice for five or less journeymen, and one additional apprentice for each five additional journeymen. No shop to have more than three apprentices. Apprentices to serve four years. Wages as mutually agreed on.

No person to have right to interfere with workmen during working hours. Workmen may work for whomsoever they see fit. Employers may discharge whomsoever they see fit.

All stone cutters who withdrew from the Ottawa local since May 1, 1921, to be

reinstated in good standing upon payment of back monthly dues; no fines, penalties or levies to be paid by these men—this to apply on condition that the men join the union within one month of date of agreement.

WINNIPEG, MAN.—MASTER PLASTERERS' SECTION OF WINNIPEG BUILDERS' EXCHANGE, AND OPERATIVE PLASTERERS AND CEMENT FINISHERS No. 334. Agreement to be effective from July 25, 1921, to August 30, 1922.

No stoppage of work to take place before any matter under dispute is brought before the Joint Arbitration Committee and a settlement is reached. Committee to be called within 48 hours, and to consist of three members of each party. No settlement to be final until submitted to the Union for ratification.

Hours of labour, eight per day, four hours on Saturdays.

Men working out of town to have transportation and board paid, also travelling time.

Overtime, until 9 p.m., time and one

half, thereafter and Saturday afternoons, Sundays and holidays (named), double time. No work on Labour Day.

Minimum wages: Per hour—\$1.07½. Foremen not less than 10 cents per hour over regular rate.

Nothing in agreement is to prevent both parties from getting together to discuss anything that may arise that shall be of advantage to the trade.

MONTREAL, QUE.—RECOGNIZED BOSS LATHERS, AND WOOD, WIRE AND METAL LATHERS' INTERNATIONAL UNION, No. 315. Agreement to be in effect from May, 1921, to April, 1922, with three months' notice of change.

Only union members to be employed. Union members to work only for recognized bosses. Members may not contract without taking out a withdrawal card and signing up as bosses.

Hours of labour: per day, eight with four on Saturdays.

Wages: Per hour—90 cents; overtime, time and one-half; holidays, double time.

PRIVY COUNCIL DECISION AS TO THE BOARD OF COMMERCE OF CANADA

THE Board of Commerce Act and the Combines and Fair Prices Act were passed by the Dominion Parliament in July, 1919, following an investigation into the cost of necessities of life by a special Committee of the House of Commons.* The first of these Acts, the Board of Commerce Act, provided for the appointment of a Board to administer the Combines and Fair Prices. The latter Act was divided into two parts: Part I to restrain and prohibit combines, and Part II to prevent undue accumulation of necessities of life and the charging of unfair or excessive prices

therefor, and to regulate the holding and disposition of such necessities. The Act also provided for a reference of any question of law or of jurisdiction to the Supreme Court of Canada.

Early in 1920 the Board stated a case whereby a number of general questions affecting the constitutional powers of the Board were submitted for determination of the Supreme Court of Canada, the principal enquiry being as to whether or not Section 17 of the Combines and Fair Prices Act, 1919, was *intra vires* of the Parliament of Canada. It was found, however, that the questions submitted were too general, and it was subsequently arranged that

*See LABOUR GAZETTE, August, 1919, and various subsequent issues.

this case should be superseded by a new case which should contain a statement of fact in some matter or matters pending before the Board and should formulate questions of law or jurisdiction which had actually arisen in their consideration, indicating how such questions arose. Such a case arose in regard to an order of the Board with respect to the profits certain retail dealers in clothing might lawfully take. The Board submitted the following questions.

1. Has the Board lawful authority to make the order?
2. Has the Board lawful authority to require the Registrar or other proper authority of the Supreme Court of Ontario at Toronto to cause the order when issued to be made a rule of said Court?

The Supreme Court divided equally on the questions, and they were referred to the Judicial Committee of the Privy Council whose judgment was delivered on November 11, 1921.

The judgment stated that the order in question was to the effect that certain retail dealers in clothing in the city of Ottawa were prohibited from charging as profits on sales more than a certain percentage on cost which was prescribed as being fair profit. The validity of this order depended on whether the Parliament of Canada had legislative capacity, under the British North America Act of 1867, to establish the Board and give it authority to make the order. It was held that the subjects of undue combination and holding might well be matters in which the Dominion had a great practical interest, and that in special circumstances, such as those of a great war, such an interest might become of paramount and overriding importance, but that under normal conditions it was quite another matter to say that a general Canadian policy could justify interference on such a scale as the statutes in controversy involved with the property and civil rights of the inhabitants of the provinces. It could be, therefore,

only under necessity in highly exceptional circumstances, such as could not be assumed to exist in the present case, that the liberty of the inhabitants of the provinces might be restricted by the Parliament of Canada and that the Dominion could intervene in the interests of Canada as a whole in questions such as the present one. The words, "the regulation of trade and commerce", if taken by themselves assisted the present Dominion policy, but, as had been held in previous decisions, the authority of the Dominion Parliament to legislate for the regulation of trade and commerce did not, by itself, enable interference with particular trades in which Canadians would, apart from any right of interference conferred by these words above, be free to engage in the provinces. Nor did these questions come under Dominion jurisdiction as criminal law, as it was quite another thing, first, to attempt to interfere with a class of subjects committed exclusively to the provincial legislatures, and then to justify this by enacting ancillary provisions designated as new phases of Dominion Criminal law. Nor did the British North America Act enable the Parliament of Canada to provide for the establishment of additional Courts (e.g. the Board of Commerce) for the better administration of the law of Canada to enable that parliament to encroach on provincial rights, such as the power of property and civil rights in the provinces exclusively conferred on their legislatures. The jurisdiction conferred on the Board of Commerce appeared to their Lordships to be *ultra vires*.

In regard to the policy adopted in the two Acts their Lordships stated that they did not find evidence that the attainment of the end sought was practicable without the co-operation of the provincial legislatures. It might well be that it was within the power of the Dominion to call for statistical and other information which might be valuable for guidance in questions affecting Canada as a whole. Such information might be required before any power to regulate

trade and commerce could be properly exercised, but even this construction afforded no justification for interpreting the British North America Act in a fashion which would make it confer on the Dominion Government capacity to regulate particular trades and busi-

nesses. Their Lordships therefore found that the Board had no lawful authority to make the order in question and consequently no lawful power to enforce such an order, both questions referred to it being therefore answered in the negative.

PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1921

RICES continued to decline, retail prices of foods as well as the index number of wholesale prices again showing slightly lower levels. The principal decreases were in foods and farm products, but there were appreciable declines in some textiles, in lumber, and in house furnishings. Dairy products and raw furs showed increases.

In wholesale prices, the index number was down to 227.3 for November as compared with 229.2 for October, 304.2 for November, 1920, 307.7 for November, 1919, 290.9 for November, 1918, and 137.5 for November, 1914. The chief changes for the month were declines in grain, livestock and meats, miscellaneous foods, textiles, metals and implements, building materials, and in house furnishings. The only increases of importance were in dairy products, and in raw furs.

In retail prices the average cost of the family budget of 29 staple foods in some sixty cities at the beginning of November was \$11.08 as compared with \$11.48 at the beginning of October, \$15.32 in November, 1920, \$14.27 in November, 1919, \$13.49 in November, 1918, and \$7.96 in November, 1914. The cost of food, fuel, and rentals averaged \$21.60 for November as compared with \$22.01 for October, \$26.13 for November, 1920, \$22.99 for November, 1919, \$21.45 for November, 1918, and \$14.25 for November, 1914. The chief changes for the month were decreases in meats, bread, flour, potatoes, and increases in eggs. Coal and wood averaged slightly lower.

The table of retail prices and rentals shows the prices at the beginning of November of over one hundred staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figure being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who do a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods

to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts exclusively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, those being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality.

It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

Retail Prices

Meats were lower, sirloin steak averaging 28.1c. per pound for the Dominion as compared with 30.4c. in October, and 35.1c. in July. Round steak and rib roast were also slightly lower. Mutton averaged 24.6c. per pound as compared with 26.3c. in October and 32c. in April. Fresh pork aver-

*December only.

aged 3c. per pound lower and pork chops nearly 4c. lower. Salt pork averaged 2c. per pound lower and bacon 2½c. Boiled ham averaged 66.2c. per pound as compared with 72.5c. in October and 74.8c. in January. Fish showed little change. Lard averaged 23c. per pound as compared with 24.1c. in October and 33.9c. in January. Fresh eggs averaged 59.4c. per dozen as compared with 50.7c. in October and 85.2c. in January. Milk was higher in New Glasgow, Hamilton, Sault Ste. Marie and Brandon, but prices were lower in Chatham Winnipeg, and Medicine Hat. Butter showed little change, prices averaging almost the same in each province as in October. Cheese was down, new cheese showing a greater decrease than old cheese, averaging 29.8c as compared with 32c. in October and 38.7c. in April. There was a general decrease in bread, the price averaging over ½c. per pound lower. Flour, spring wheat patents, averaged 5.4c. per pound as compared with 6.1c. for October and 6.9c. for March. Rolled oats, corn meal, and pearl barley eased off. Rice and tapioca showed little change. Canned tomatoes, peas and corn were steady. Potatoes averaged \$1.65 per bag of 90 lb. as compared with \$1.93 in October, \$1.08 in July, and \$2.10 in February, there being decreases for the month throughout the Dominion. Beans, onions, and apples showed slight increases. Jam and canned fruits showed slight decreases. Honey fell to \$1.31 per five-pound pail as compared with \$1.39 in October and \$1.74 in March. Sugar was ½c. per pound lower, at 9.8c. per pound as compared with 10.3c. in October and 12.8c. in April. Cream of tartar and laundry starch were slightly lower. Anthracite coal averaged \$17.55

per ton of 2,000 lbs as compared with \$17.63 in October, \$17.45 in August, and \$19.71 in February. Bituminous coal averaged \$11.62 as compared with \$11.76 in October, and \$14.63 in February. Rent was higher at Charlottetown and Stratford, but was lower at Thetford Mines and Toronto.

Wholesale Prices

GRAINS AND FODDER. — Wheat No. 1 Manitoba Northern had fallen to \$1.06 per bushel at the end of October at Winnipeg, but rose gradually to \$1.19 at the end of November. Ontario winter wheat fell to 95c.-\$1.00 per bushel at Toronto, but later rose 5c. Barley at Winnipeg was practically unchanged at 57c. per bushel. Ontario barley fell to 54c. but advanced to 60c. Oats at Winnipeg fell to 40c. per bushel but rose to 45c. Corn was down to 57c. per bushel but rose to 66c. at Toronto. Flaxseed was down to \$1.70 per bushel at Winnipeg but rose to \$1.75. Rye fell to 70c. per bushel at Toronto but later advanced to 80c. Hay was steady at \$27-\$28 per ton at Montreal. Bran advanced at Toronto from \$21 per ton to \$22, and shorts from \$23 to \$24.

ANIMALS AND MEATS.—Best cattle at Winnipeg had fallen to \$4.50-\$5. per hundred pounds but gradually advanced to \$5-\$5.25. Butcher cattle at Toronto were down from \$5.75-\$6.50 to \$5.50-\$6.25. Beef was unchanged at the low prices reached in October. Hogs advanced from \$8.50 per hundred pounds to \$8.75 at Toronto. Breakfast bacon was easier at 28c. per pound and medium sized hams at 22c.-23c. Mess pork advanced from \$30 per barrel to \$33. Lard declined from 17c. per pound to

*Preliminary figures.

†Eight commodities off the market, fruits, vegetables, etc.

One line of space was

‡Number of commodities varies from month to month.

14½c. Sheep advanced from \$4 per hundred pounds to \$4.25. Mutton eased off from 9c.-12c. per pound to 7c.-10c. Fowl declined from 17c.-24c. per pound to 15c.-24c. Turkeys advanced from 40c. per pound to 42c. but fell off to 41c.

DAIRY PRODUCTS.—Creamery butter at Montreal fell off to 38c. per pound but later rose to 40c. Cheese had fallen to 16c. per pound but advanced to 19½c. Eggs advanced at Montreal from 65c. per dozen to 80c. Storage eggs at Toronto advanced from 46c. per dozen to 47c. Milk had risen to \$2.50 per eight gallon at Toronto in October, but in November fell to \$2.20-\$2.27.

FISH.—Halibut on the Atlantic Coast advanced from 12c. per pound to 14c. Salt mackerel advanced from 6c. to 7c. per pound. Salmon trout at Toronto was down from 13c. per pound to 11½c.

FRUITS AND VEGETABLES.—Winter apples were on the market at Toronto, Spies at \$7.50, Baldwins at \$6.25, and Greenings at \$5.60 per barrel. Oranges were up from \$7.50 per box to \$8. Currants were down from 17c. per pound to 15c. Prunes were up from 11¾c. per pound to 12½c. Potatoes at Toronto were down from \$1.85 per bag to \$1.50 per bag in small lots. Potatoes at Montreal in car lots were down to \$1.10-\$1.15 but later reached \$1.15-\$1.25. Onions advanced to \$4.50 per bag. Turnips were up to 85c per bag. Canned peas were firmer at \$1.40-\$1.50 per dozen.

MISCELLANEOUS FOODS.—Bread declined at Toronto from 6c. per pound to 4¾c. per pound. Flour, spring wheat patents, was down from \$8 per barrel to

\$7.40. Winter wheat flour was down from \$5.30 per barrel to \$4.60. Rolled oats fell from \$3.40 per bag to \$2.95. Sugar fell from \$8.64 per hundred pounds to \$8.14 at Toronto. Glucose was lower.

TEXTILES.—Wool was unchanged. A line of woollen underwear declined from \$15 per dozen to \$14.25. Raw cotton was down from 19.65c. per pound to 17.05c. at New York. Several lines of cotton goods advanced approximately 20 per cent as a result of the steep increase in raw cotton in September. Raw silk was higher, Japan filatures being up from \$6.10 per pound to \$6.70 and Italian classical from \$6.30 to \$6.85. Jute was down 20 per cent. Flax fibre was easier.

HIDES, LEATHER, BOOTS AND SHOES.—No further changes were reported.

METALS AND IMPLEMENTS.—Pig iron, galvanized sheets, tin plates and steel bar were lower. Silver was down to 67½c. per ounce at New York. Soldering coppers fell from 41c. per pound to 38c.

FUEL AND LIGHTING.—Anthracite and bituminous coal and coke were steady. Coal oil rose from 20½c. per gallon to 21c.

BUILDING MATERIALS.—New Brunswick spruce deals were again higher, rising from \$26 per M to \$28. Pine, good sidings, shipping culls, and box boards at Ottawa were lower. Lath, hemlock, spruce, and birch declined. British Columbia fir at Winnipeg was down to \$29-\$30 per M. Building paper was down 10c. per roll. Linseed oil was down from 88c. per gallon to 83c. Tur-

pentine rose from \$1.15 per gallon to \$1.25.

HOUSE FURNISHINGS.—Kitchen chairs, sideboards, and bedroom suites were lower. Glass tumblers declined 10 per cent. Silver plated knives and forks declined 15 per cent. Sad irons declined 10 per cent.

DRUGS AND CHEMICALS. — Alum, bleaching powder, brimstone, caustic soda, copperas, and soda ash declined.

MISCELLANEOUS.—In raw furs, muskrat skins, racoon, and skunk declined. In pulp and paper, sulphite pulp was lower.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE accompanying tables and the following notes give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale price index numbers are named in all cases.

United Kingdom

The *Economist* index number of wholesale prices at the end of October showed a fall of almost 7 per cent from the previous month, and was only 208.5, the lowest point since September, 1916. All groups showed a decline as compared with the previous month, the fall being most pronounced in cereals and meat. In the textile group there was a reaction in cotton prices after September's sudden advance, but quotations were still above the level at the end of August. No change was shown in quotations for pig iron and iron bars, but the price of steel rails was cut.

The *Statist* (Sauberebeck's) index number of wholesale prices for the end of

November showed a decline of 1.2 per cent from the end of October. The sugar, coffee and tea group advanced a little less than 4 per cent, and the foodstuffs group showed a fractional gain, but these were offset by declines in all of the other groups except animal food, which remained stationary.

At November 1 the official index number of retail prices of foods comprised in the food budget was 100 per cent above the level of July, 1914. This indicated a fall of nearly five per cent during the month of October. There were substantial decreases in meats, bread, flour, butter, cheese, sugar, potatoes and margarine. The prices of eggs showed a large increase.

The increase in all items of cost of living since July, 1914, was placed at 103 per cent, as compared with 110 per cent at October 1.

Switzerland

The index number of retail prices of the Union of Swiss Co-operative Stores showed a fall of 3 per cent from the 1st September to the 1st October, the figure for the latter date being double that for

July, 1914. This index number comprises a number of foods, as well as a few other articles, such as coal, coal-oil and soap. The movement in the month of September was not so uniform as during a number of previous months, potatoes (semi-wholesale) oil, sugar, and beef showing marked reductions, while a number of other articles were reduced in a lesser degree, and a smaller number advanced somewhat in price. Sauerkraut shows a large increase.

Italy

The index number of cost of living for the month of August at Turin, compiled by the Bureau of Labour and Statistics at that place, showed an increase of 314 per cent as compared with the average for the first six months of 1914. This was an advance of about 2.3 per cent on the July figure, and a decrease of about 12½ per cent from the highest point reached, in March, 1921. The advance during the month was chiefly in food.

India

The index number of cost of living, including food, fuel and lighting, clothing and rent, issued by the Bombay Labour Office, showed a steady rise from April to September, when it reached a point 4 per cent below the peak of October, 1920. The figure for October, 1921, however, showed a slight recession, due chiefly to a fall in the price of most food-grains and decreases in other food articles, including refined sugar. Clothing advanced somewhat in price.

United States

WHOLESALE PRICES.

The index number of wholesale prices calculated by the Bureau of Labour

Statistics of the United States was 150 for the month of October, a slight decline from the figure of the preceding month. The changes in the individual groups were also slight. For the first time since June farm products showed a net decrease, due to the drop in corn, wheat and other grains. Food products, building materials, and house furnishing goods also averaged less than in September, but cloths and clothing, fuel and lighting and metals showed small net increases.

Gibson's average index number of food prices for November was 62.0, a decline of about 4 per cent from the previous month.

The *Annalist* index number of food prices for November 12, 1921, was 160.581, a decline of over 4½ per cent from October 15.

Bradstreet's general index number for December 1, was \$11.3127, a decline of less than ½ per cent from the previous month, and a rise of slightly more than 1 per cent as compared with the figure for October 1.

Dun's general index number for December 1, was \$164.531, an increase of about ½ per cent on the previous month, and of about 1½ per cent on the figure for October 1.

COST OF LIVING.

The table on page 1528, issued by the Bureau of Labour Statistics, shows the changes in the cost of living in the United States from 1913 to September, 1921. These figures are averages based on the prices secured in thirty-two cities. The decrease shown by the table from June, 1920, to September, 1921, is 18.1 per cent.

** No change.

The Bureau's index number of retail food prices for October 15 stood at practically the same level as for the preceding month. The chief decreases during the month were in potatoes, 13 per cent; cabbage, 11 per cent; leg of lamb, 9 per cent; ham, 6 per cent; raisins, 6 per cent. The chief increases were in strictly fresh eggs, 17 per cent; onions, 14 per cent; oranges, 7 per cent; butter, 5 per cent.

The index number of cost of living in the United States issued by the National Industrial Conference Board stood at 164 for October, prices for July, 1914, the base period, being taken as 100. This was a decline of less than 1 per cent

from the previous month. The index numbers for the different groups, also expressed as percentages of price levels in July, 1914, were as follows: Food, 153; Shelter, 169; Clothing, 160; Fuel and Light, 179; Sundries, 180.

The cost of living index number for Massachusetts for the month of November was 159.2, expressed as a percentage of average retail prices in 1913. The group figures from which this combined number was obtained were as follows: Food, 137.2; Clothing, 187.6; Shelter, 161.0; Fuel, etc., 180.5 Sundries, 180.0. The combined number shows a fractional decrease from the figure for October.

RECENT LEGAL DECISIONS AFFECTING LABOUR

THE two legal decisions summarized below relate respectively to the payment of wages and to workmen's compensation in Quebec.

For the payment of wages a verbal promise is binding in Quebec

A firm which had a contract for cutting a quantity of timber in the province of Quebec let out the cutting at one of their lumber camps to a sub-contractor. The sub-contractor being a poor man at first

did the cooking for the camp as well as the supervision of the work. On one of the chief contractors insisting that he engage a cook and devote his whole time to the work of supervision, he employed

the wife of one of the men as cook. These circumstances caused the men in the camp to fear that the sub-contractor might not be able to pay their wages. The chief contractor intervened and promised to pay them in order to make sure that their work would continue. The firm of contractors carried out this engagement and paid the wages of all the men, but they refused to pay the cook because they said they had not agreed to do so. An action was brought against the contractors in the Superior Court of the District of Quebec, for recovery of the cook's wages amounting to \$238. The Court pronounced in favour of the cook, and the defendant contractors appealed to the Court of King's Bench. In the appeal Court the contractors based their plea on the ground that this case fell within the scope of Article 1235 of the Civil Code of Quebec which reads in part as follows:

"In commercial matters in which the sum of money or value in question exceeds fifty dollars no action or exception can be maintained against any party or

his representatives unless there is a writing signed by the former in the following cases. . . . (3). Upon any representation or assurance in favour of a person to enable him to obtain credit money or goods thereupon."

It was held by the Court that Article 1235 was one relating to special cases and as such ought to be interpreted strictly; "in fact a verbal proof is permitted in all commercial matters, but Article 1235 declares it illegal in certain well defined cases." While paragraph 3 of this Article requires a signed document to enable a person to obtain credit, money, or goods, the Court could not arrive at the conclusion that in binding themselves to pay the wages of the men in this camp, the defendant contractors were doing anything for the purpose of obtaining credit, money or goods. It was declared that Article 1235 did not apply to this case, but that it fell within the general rule. The judgment of the Superior Court was therefore sustained, and the appeal was dismissed. (*Quebec —Gravel vs. Gagnon.*)

Employer not responsible for accident to woodcutter when felling a tree

An experienced woodsman was employed with three others to fell certain trees, which the owner indicated. One of the trees was dead and rotten. The man objected to felling this tree on account of the danger to which he would be exposed, but he undertook the work. The tree fell suddenly and the woodsman was struck by the broken end, which caused two ribs to be broken, and serious injury to his shoulder. He was unable to work for 78 days and thereby lost the sum of \$234, in addition to which

he was obliged to spend \$19 for medical assistance and care. He brought an action in the Superior Court of Quebec for re-imbursement of these amounts. The trial judge awarded the plaintiff's claim in full on the grounds that the employer knew the work of felling this tree was dangerous but he persisted in ordering the plaintiff to go on with it; that the accident while not a wilful one, was one for which the defendant employer was liable because it could have been prevented by proper care and diligence on his part;

the fact that from the knowledge the plaintiff had the danger might have been avoided was no excuse for the defendant.

The employer appealed in the Court of King's Bench against this decision. It was held by this Court that the employer was not in law responsible for this accident. The evidence did not show how it could have been prevented, and the employer was entitled to have the tree

cut. Notwithstanding the tendency of the Quebec courts to find someone responsible for every accident, there are cases where no responsibility attaches to anyone and this was considered to be such a case. For these reasons it was held that there had been an error in the judgment of the Superior Court. The appeal was therefore maintained and the action dismissed with costs. (*Quebec—Marc-Aureli vs. Blanchard.*)
